Reptation [is] a mode of progression by advancing successively parts of the trunk which occupy the place of the anterior parts, which are carried forwards, as in serpents. The term is also applied to the slow progression of those animals whose extremities are so short that the body touches the ground. *—Owen, in Brander and Cox, Dictionary of Science, Literature, and Art.*

Réptile, *adj.* [Lat. *reptilis*, from *repto* (also *repto*) = creep; pass. part. *reptatus*; *reptilo, -antis*.] Creeping upon many feet.

Cherish the sully'd *reptile* race with moss.

Gay, Rural Sports, l. 67.

Réptile, *s.* Animal that creeps on many feet.

This, along with the explanation of the previous entry, stands as it came from Johnson. It is evidently framed so as to exclude the serpents. That this is not the zoological import of the word is well known; the *Reptilia*, in *Zoology*, being a class that contains not only the footless Ophidians (serpents), but the Batrachians (frogs and toads), the Saurians (lizards and crocodiles), and the Chelonians (turtles and tortoises); none of which are *many-footed*. The *reptiles* of Johnson are chiefly the myriapods, centipedes, and caterpillars.

Terrestrial animals may be divided into quadrupeds or *reptiles*, which have many feet, and serpents which have no feet. *Locke, Elements of Natural Philosophy.*

Holy retreat! since no female hither,
Conscious of social love and nature's rites,
Must draw approach, from the inferior *reptile*,
To woman, form divine.

Pope, First Epistle of Collins on.

Reptilia [is] the name of a class of cold-blooded vertebrate animals, including all those which have lungs and a heart composed of two ventricles and one ventricle. Those which retain their gills during the whole or a part of their existence are termed Batrachians or Amphibia. . . . Characterizing the class of *reptiles* as defined by him, will observe, that as it is from respiration that the blood derives its heat, the insusceptibility of nervous irritation, the bluntness of *reptiles* is cold, and the muscular energy less than that of quadrupeds, and much less than that of birds. . . . The smallness of the pulmonary vessels, and the relations of their trunk to the heart, permit *reptiles* to suspend the process of respiration, without arresting the course of the blood, thus they dive with more facility, and remain longer under water, than either the mammalia or birds. Few *reptiles* hatch their eggs; still fewer bring forth living young. The Batrachians on quitting the egg have the form and locomotion of fishes, and some of the genera preserve these organs even after the development of their lungs. *—Owen, in Brander and Cox, Dictionary of Science, Literature, and Art.*

Républican, *adj.* Placing the government in the people; approving this kind of government.

You can better ingraft any description of *republick* on a monarchy, than any thing of monarchy upon the *republican* form. *Burke, On the French Revolution.*

It has been a great point with *republicans* divines to explain away the force of this text, Rom. xiii. 1. But for this purpose they have never been able to fall upon any happier expedient, than to say that the word *potens*, *dominus*, signifies not pious bearing power, but form of government. . . . I will

venture to add, that not a single instance is to be found in any writer, sacred or profane, of the use of the word *Republia* to signify form of government; nor is that sense to be extracted by any critical chymistry from the etymology and radical meaning of the word.—*Bishop Horsey, Sermon, January 30, 1793.*

Republiſſian. s. One who thinks a commonwealth without monarchy the best government.

These people are more happy in imagination than the rest of their neighbours, because they think themselves so; though such a chimerical happiness is not peculiar to republicans.—*Addison.*

With the same authorities before them, different historians, alike innocent of intentional misrepresentation, see only what is favourable to Protestants or Catholics, royalists or republicans, Charles I. or Cromwell; while others, having set out with the preconception that extremes must be in the wrong, are incapable of seeing truth and justice when these are wholly on one side.—*J. Republiſte. v. a. [Lat. *repudio*; Fr. *repudier*.]

The Latin dictionaries connect this with *pudet* = it shames, and *pudor* = shame, modesty. The same connect *tripudium* = a dance, with *terra* + *pudium*, a beating back of the earth, in Greek, (not Latin) *παύω*, connected with *παύω*, *παύω* = fiut. The editor, doubting this second derivation, connects *re-pudium*, with *tri-pudium*, and makes the word under notice an approximate equivalent to *rejection*. Divorce; reject; put away.

Let those that have repudiated the more inviting sin, show themselves purified and bewitched by this.—*Dr. H. More, Government of the Tongue.*

Here is a notorious instance of the folly of the *aphorists*, that while they repudiate all title to the kingdom of heaven, merely for the present pleasure of body, and their boasted tranquillity of mind, besides the extreme madness in running such a desperate hazard after death, they unwittingly deprive themselves here of that very pleasure and tranquillity they seek for.—*Bentley, Sermons.*

The jets of the salt or vitriol recede from one another, and endeavour to expand themselves, and get as far asunder as the quantity of water, in which they float, will allow; and does not this endeavour imply that they have a repulsive force by which they fly from one another, or that they attract the water more strongly than one another?—*Sir I. Newton, Optics.*

To these four kinds of matter-of-fact or assertion, must be added a fifth, *resemblance*. This was a species of attribute which we found it impossible to analyse; for which no fundamental, distinct from the objects themselves, could be assigned. Besides propositions which assert a sequence or coexistence between two phenomena, there are therefore also propositions which assert *resemblance* between them; as, This colour is like that colour; The heat of to-day is equal to the heat of yesterday. It is true that such an assertion might with some probability be brought within the description of an affirmation of sequence, by considering it as an assertion that the simultaneous contemplation of the two colours is followed by a specific feeling termed the feeling of *resemblance*. But there would be nothing gained by enumerating ourselves, especially in this place, with a generalization which may be looked upon as strained. Locke does not undertake to analyse mental facts into their ultimate elements. *Resemblance* between two phenomena is more indelible to itself than any expectation could make it, and under any discussion must remain specifically distinct from the ordinary cases of sequence and coexistence. — *J. S. Mill, System of Logic, pt. I. ch. 1, § 1.*

Responsibility. *s.* [Fr. *responsabilité*.] State of being accountable or answerable.

Where I speak of *responsibility*, I do not mean to exclude that species of it, which the legal powers of the country have a right finally to exact from those who abuse a public trust; but high as this is, there is a *responsibility* which attaches on them, from which the whole legitimate power of this kingdom cannot absolve them; there is a *responsibility* to conscience and to glory; a *responsibility* to the existing world, and to that posterity, which men of their eminence cannot avoid for glory or for shame; a *responsibility* to a tribunal, at which not only ministers, but kings and parliaments, but even nations themselves, must one day answer.—*Burke, Thoughts on a Regicide Peace*, letter iii.

2. Capable of discharging an obligation.

The necessity of a proportion of money to trade depends on money as a pledge, which writing cannot supply the place of; since the bill I receive from one man will not be accepted as security by another, he not knowing that the bill is legal, or that the man bound is honest or *responsible*. *Locke*.

Sing of love and gay desire,
Responsive to the warbling lyre. *Penton*.

3. Answerable.

If I may freely declare an opinion, I think it were not amiss if the liberty of making sermons were somehow more restrained than it is; and that rather such persons only were entrusted with the liberty, for whom the church itself may safely be *responsable*, that is, to men learned and pious, and that the other part, the 'vulgaris cleri,' should instruct the people out of the fountains of the church and the public stock, till by so long exercise and discipline in the schools of the prophets they may also be intrusted to minister for their own unto the people. *Jeremy Taylor, Apology for the Liturgy*. Take the handle in your right hand, and clasping
the blade of it in your left, lean it steadily upon the

caesura.
Set one's rest. Fully explained in Nares, from
whom all the following examples are taken,
as a common colloquial phrase, during the
time of its popularity, from the game of

one's hand; which it was pretty safe
to do when the cards amounted to fifty-

- five; but then the eldest hand, or the
player nearest the dealer, if equal, had a
preference.
And seeing so much unrenewed shame,
Set their whole rest upon the after-game.

This answer would render their counsels of less
relevance to the people, if upon those reasons they

perish in the attempt.—*Lord Clarendon, History of the Grand Rebellion.*

A combination of honest men would endeavour to
extirpate all the profligate immoral retainers to
each side, that have nothing to recommend them
but an implicit submission to their leaders. *Addi-
son, Spectator.*

From the time of Edward I., the feudal system
... declined very rapidly. But what the nobility
lost in the number of their military tenants was in
some degree compensated by the state of manner.
The higher class of them ... were exceedingly equal-
lants; ... gentlemen of large and good families, who
had attached themselves to these great peers, who
were officers which we should call menials in the
households, and sent their children thither for edu-
cation, were of course ready to follow their master
in a rising without much inquiry into the cause.
Still less would the vast body of tenants and their
retainers, who were fed at the table in time of
peace, refuse to carry their pikes and staves into the
field of battle. ... A practice much allied to con-
descension of maintenance, though ostensibly more
humble, was that of giving liveries to all retainers
of a noble family. *Holman, View of the State of
Europe during the Middle Ages*, pt. iii. ch. vii.

Retina. *s.* [Lat.] Continuation and ex-
pansion of the optic nerve at the back of
the transparent parts of the eye, upon
which the pictures of external objects fall
as objects of vision.

The optic nerve, at its entrance into the eye,
divides itself into numerous small fasciculi of fila-
ments, and these appear to spread themselves
out, and to insinuate with each other by an ex-
change of fibrils, so as to form a net-like plexus
which constitutes the inner layer of the *retina*.
The principal part of the thickness of the *retina*,
however, is made up of a series of layers. ... These
layers, as seen in a vertical section, succeed each
other from within outwards as follows:—In contact
with the vitreous layer is a layer of finely granular
matter of a greyish hue, in which an indistinct ra-
diating fibrillar appearance is seen; next is a layer of
definite granules, which seem like minute cells
closely investing each other; outside this is another
layer in which the appearance of radiating fibrils is
more distinct; this, again, is succeeded by another
granular layer resembling the preceding; and out-
side all there is a layer of 'cassia' or 'rod-like'
bodies, which has long been known as 'Jacob's
membrane.'—*Dr. Carpenter, Principles of Human
Physiology*, § 305; 1844.

The *retina*, as examined microscopically, presents,
among other elements, a fasciculated pavement made
up of minute rods packed side by side, with their
ends exposed so as to form its surface. As far as
can be made out, each of these rods is supplied by a
separate nerve; and in, as must be supposed, ca-
pable of independent stimulation.—*Herbert Spencer
Principles of Psychology*.

It is by means of optical images that vision is
effected. The eye is an assemblage of lenses which
concentrate the rays emanating from each point of
the object on a thinnest of very delicate nerves called
the *retina*, where an exact image or representation
of the object is formed; and it is this image which
is perceived or felt by the *retina*. The images of
external objects are painted on the *retina* in a re-
versed position, and from the *retina* the impressions
are transmitted to the sensorium by the optical
nerves. *Frankland, in Brand and Cox, Dictionary
of Science, Literature, and Art*, in voce *Image*.

Retinue. *s.* [Fr. *retinue*.] Number attend-

fire; and he assumes that this process is an analysis

There is a beautiful and affecting story told of
your Chatterton. Not long before the close of his
melancholy career he was wandering in this way in

poetry, when he stumbled and fell into a new-
made grave! His companion, as he assisted him to
get out, congratulated him playfully on the 're-

shook his head, but from what he said, it was clear
that he thought the accident prophetic. And not
long afterwards he drank of the fatal cup, and added
one more name to the list of martyrs. *Hanway,*
Singleton Postscript.

Reverie and castle-building is a kind of waking
dream, and does not differ from dreaming, except
by the consciousness which accompanies it. In this

The mind is thus occupied without being properly
active; it is active, at least, without effort.—*Dr.*

4. Contradict; repel.
Better it was in the eye of his understanding, that
sometime an erroneous sentence definitive should
prevail, till the same authority, perceiving such

than that strife should have rapidly to grow, and
not come speedily unto some end.—*Hooker, Eccle-*
siastical Polity, Preface.

A decree was made, that they had forfeited their
liberties, and about this made great means, yet
could they not procure this sentence to be *reversed*.

which may at present be enjoyed.—*Hammond,*
On Piousness.

I cannot explain the present subject without men-
tioning that by a statute in the reign of Edward I.,
commonly called De Donis Conditionalibus, lands
given to a man and the heirs of his body, with re-
mainder to other persons, or *reversion* to the donor,
could not be alienated by the possessor for the time
being, either from his own issue or from those who
were to succeed them. Such lands were also not
subject to forfeiture for treason or felony; and more,
perhaps, upon this account than from any more ex-
tended principle, these entails were not viewed with
favour by the courts of justice. Several attempts
were successfully made to relax their strictness; and
finally, in the reign of Edward IV., it was held by
the judges in the famous case of Tallard, that a
tenant in tail might, by what is called suffering a
common recovery, that is, by means of a fictitious
process of law, divest all those who were to come
after him of their succession, and become owner of
the fee simple.—*Hallam, Constitutional History of*
England, ch. i.

Nothing is so effectual as frequent vomits to withdraw and *revolve* the present humours from the relaxed bowels.—*Chryse, Natural Method*. (Ord MS.)

Revulsion. *s.*

1. Act of revelling or drawing humours from a remote part of the body.

There is a way of *revulsion* to let blood in an adverb. *Bacon, Natural and Experimental History*.

I had heard of some strange cures of frenzies, by constant applications of fire to the lower parts, which seems reasonable enough, by the violent *revulsion* it may make of humours from the head. *Sir W. Temple, Miscellaneous*.

Derivation differs from *revulsion* only in the measure of the distance, and the force of medicines used: if we draw it to some very remote or contrary part, we call it *revulsion*; if only to some neighbouring place, and by gentle means, we call it derivation. *Hallam, Surgery*.

To denote the mode of cure, by stimulating distant parts, the terms counter-irritation, derivation, played. *J. P. Watson, Lectures on the Principles and Practice of Medicine*, lect. 2.

2. Act of withholding or drawing back.

There is no excuse to forget what every th prompts unto us. . . . To run on in despite of the *revulsion* and pullbacks of such remors, necessary transmission.—*Sir P. Browne, Christian Morals*, iii. 10.

Revulsive. *s.*

1. Revulsion, in its medical sense.

His flux of blood breaking forth again with greater violence than it had done before, was not to be stopped by outward applications, nor the *revulsive* of any kind, not of its own, the opening of a vein, first in the arm, and after in the foot. *Bishop Fell, Life of Hammond*, § 2.

2. That which has the power of subducing or withdrawing.

The most powerful *revulsive* of his danger.—*Dr. H. More, Discourse of Christian Piety*, p. 263.
In his sicknesses he never intermitted study, but rather reinforced it then as the most appropriate *revulsive* and diversion of pain.—*Bishop Fell, Life of Hammond*, § 2.

Revulsive. *adj.* Having the power of revulsion.

Reward. *v. a.*

1. Give in return.

Thou hast *rewarded* me good, whereas I have *rewarded* thee evil.—*1 Samuel*, xxi. 17.
They *rewarded* me evil for good.—*Psalm*, xlv. 12.

2. Repay; recompense for something good.

God *rewards* those that have made use of the single talent, that lowest proportion of grace, which he is pleased to give; and the method of his *rewarding* is by giving them more grace. *Hammond*.
To judge the unfaithful dead, but to *reward* His faithful, and receive them into bliss.

There is no more reason to *reward* a man for believing that four is more than three, than for being hungry or sleepy; because these things do not proceed from choice, but from natural necessity. A man must do so, nor can he do otherwise.—*Bishop Wilkins*.

This munificence on the part of a prince who was little in the habit of *rewarding* literary merit, and whose whole soul was devoted to the interests of his church, raises in us a surprise which Mr. Leigh Hunt will, we fear, pronounce very uncharitable.—*Macaulay, Critical and Historical Essays, Comic Dramatists of the Restoration*.

Reward. *s.*

1. Recompense given for good performed.

Rewards and punishments do always presuppose something willingly done well or ill; without which respect, though we may sometimes receive good, yet then it is only a benefit, and not a *reward*.—*Hooker, Ecclesiastical Polity*.

To myself I owe this due *reward*,
Not to make love my gift, but my *reward*.

Men have
led to the immortality of the soul and the recompenses of another world, promising to themselves some *rewards* of virtue after this life.—*Archbishop Tillotson*.

2. It is sometimes used with a mixture of irony, for punishment or recompense of evil.

A liberal *rewarder* of his friends.
Shakespeare, Richard III. i. 3.

As the Supreme Being is the only proper judge of our perfection, so is he the only *rewarder* of them.—*Addison*.

All judges, as well as *rewarders*, have popular assemblies best, of those who best deserved from them. *Swift*.

Bring me to the test,
And I the matter will *reward*; which madness
Would gambol from.—*Shakespeare, Hamlet*, iii. 4.

Rez, in Play Rez. Act the king (Lat. *rex* = king).

As those that in their porter's strength
Exposed all their trust;
With these did Hercules *play rez*,

Warner, Albion's England, b. i. ch. vi.
(Nares by H. and W.)

Rhabarbarate. *adj.* [see *Rhubarb*.] Impregnated or tinctured with rhubarb.

The salt humours must be evacuated by the *rhabarbarate*, and sweet mucus purged, with acids added, or the purging waters.—*Sir J. Floyer, Preface to the State of the Animal Humours*.

Rhabdology. *s.* [Gr. *ῥαβδος* = staff + *λογος* = word, principle, calculation.] See extract.

Rhabdology . . . in arithmetic [is] a name sometimes given to the method of performing the two most difficult and obscure rules, viz. multiplication and division, by the two easiest, viz. addition and subtraction, by means of two little rods or laminae, on which are inscribed the simple numbers, and which are to be shifted according to certain rules. These rods are what we popularly call Napier's bones, from their inventor, a Scottish baron, who likewise invented logarithms.—*Rees, Cyclopaedia*.

Rhabdomancy. *s.* [Gr. *ῥαβδος* = staff + *μαντεία* = prophecy.] Divination by means of a staff or wand.

Of juvenile *rhabdomancy* is that which is used in mineral discoveries with a forked hazel, commonly called *Museus's rod*, which, freely held forth, will stir and play if any mine be under it.—*Sir T. Browne, Vulgar Errors*.

St. Jerome makes mention of this kind of divination in his commentary on Hosea, iv. 12. The same, he finds again in Ezekiel, xxi. 21, 22. If it be the same kind of divination that is mentioned in the two passages, *rhabdomancy* must have been also the same superstition with *geomancy* (divination by arrows). . . . This however is certain; the instruments of divination mentioned by Hosea are different from those of Ezekiel.—*Rees, Cyclopaedia*.

We find *rhabdomancy* (sic) a popular form of divination among the Greeks, and also among the Romans. . . . According to Valerius Maximus, Varro left a satire on the 'Virgilia divina' . . . Lucian tells us that the Germans practised some sort of divination by means of rods. . . . The fourteenth laws of the Frisians ordered that the discovery of murders should be made by means of divining rods used in church. . . . Basil Valentine . . . says that there are seven names by which this rod is known. . . . The names are Divine Rod, Shining Rod, Leaping Rod, Translucent Rod, Trembling Rod, Dipping Rod, Superior Rod. . . . *Baring-Gould, Curious Myths of the Middle Ages, First Series, The Divining Rod*.

Rhadamantus. *adj.* Just, severe, as a judgment of Rhadamantus, one of the three judges of Hades.

If you are guilty or suspected of guilt, it will go ill with you here. Francis's arrest, carried by a premeditated arrow; you are in strait prison; you are in Francis's bodily presence; those sharp St. Dominic eyes, that diabolic intellect, prying into you, probing, cross-questioning you, till the secret cannot be hid; till the three ball-cartridges are handed to a sentry;—and your doom is *Rhadamantus*.—*Carlyle, Critical and Miscellaneous Essays, Dr. Francis*.

Rhapsode. *s.* [Gr. *ῥαψωδία*.] Rhapsodist. From the remarkable description given by Herodotus of the exhibition of the *rhapsodes* from Sicily by the despot Cleisthenes in the time of Solon (about B.C. 600), we may form a probable judgment that the Thebans and the Epigoni were then *rhapsodized* at Sicily as Homeric *rhapsodes*. . . . Taking in conjunction all the points of this very curious tale, I venture to think that the *rhapsodes* incurred the displeasure of Cleisthenes by reciting, not the Homeric Hymn, but the Homeric Theban and Epigoni.—*Grote, History of Greece*, pt. i. ch. xxi. and note.

Rhapsodical. *adj.* [see *Rhapsody*.] Unconnected.

See Dr. Heylin's confutation of Fuller's *rhapsodical* stories of the church of England.—*Dean Martin, Letters*, p. 17: 1082.

Rhapsodist. *s.*

1. One who composes, recites, or sings, rhapsodies.

Schott ballads in the old Scottish dialect are also interspersed among those of our ancient English minstrels; and the artless productions of these old *rhapsodists* are occasionally contrasted with, 'premiered' the composition of contemporary poets of a higher class.—*Bishop Percy, Reliques of Ancient Poetry*, preface.

Owen and Homer, though both of the profession of *rhapsodists*, are thought to be very unlike.—*Tyler, On Pope*, p. 38.

A few seasons ago, there was an Italian *rhapsodist* in London; who, as I am told, made excellent extempore verses on every subject that was proposed to him.—*Times*, On Pope, p. 33.

The public recital of the poems appears to have prevailed throughout Greece from a remote period. The place with which tradition first connects it is Chios, an island advancing special claims to be considered the birthplace of Homer. . . . The first public honours awarded them in Sparta are dated by the best authorities from the age of Lycurgus. . . . The original and primary import of the title *Rhapsodist*, familiarly borne by the performers in these solemnities, is obscure. The generally received etymology is that which characterizes them as *Stitchers* or *Butchers* of poem. The allusion here is partly to the irregularity of which they were guilty, by disturbing the proper order of the text in their recital; partly to the impudic interpolation of matter from their own stores; partly, perhaps, chiefly, to their habit of preloving or subsiding to the original poems, or parts of poems, dedicatory prologues or epilogues in honour of the deities with whose festivals such public performances were connected. Others derive the name from the staff or wand of office (*rhapsos*, *rhapsis*), which distinguished the professional reciter of later times from the original poet; while the latter sang, solely or chiefly, his own compositions, to the accompaniment of his lyre; the *rhapsodist* rehearsed the poems of others. . . . Whatever degree of value may be attached to the services of this fraternity, a certain degree of sarcasm seems . . . to have been connected with their name. From it derives that of *rhapsody*, originally applied to the portions of the poem habitually allotted to different performers in the order of recital, afterwards transferred to the twenty-four books, or cantos, into which each work was permanently divided by the Alexandrian grammarians. *Moss, Critical History of the Language and Literature of Ancient Greece*, b. ii. ch. ii. § 3.

The mention of *rhapsodists* leads us to consider the circumstance from whence that name is derived, and from which alone we can collect a clear and lively idea of epic poetry, viz. the manner in which these compositions were delivered. Homer everywhere applies the term *rhōgē* to the delivery of poem, a *rhōgē* merely denotes the every-day conversation . . . of common life; on the other hand, later authors, from Pindar downwards, use the term *rhōgē* frequently to designate poetry, and especially epic, in contradistinction to lyric. . . . In later times . . . the *rhapsodists*, or chanters of epic poetry, are distinguished from the . . . singers to the cithara. The expression *rhōgē*, *rhōgē*, signifies nothing more than the peculiar method of epic recitation.—*Donaldson, Translation of K. O. Müller's History of the Literature of Ancient Greece*, ch. iv. § 3.

If the composition of the Homers is explained without the aid of writing, by breaking them up into smaller parts, the mode in which they were transmitted is not accounted for. A poem which might not be too long for the author himself to retain in his memory without any artificial help, might still be of such length, that no common listener could hope to make himself master of the whole, after any number of recitations, unless they were laboriously adopted by the author in this specific purpose. But who can imagine a Homer so employed? This, however, it has been thought was the occasion which called forth the astonishing powers of the *rhapsodists*, a class of persons, who, though endowed with some poetical invention, possessed a much more extraordinary faculty of memory, which enabled them, after a few hearings, accurately to remember many hundreds of verses.—*Bishop Thirlwall, History of Greece*, ch. vi.

2. One who writes without regular dependence of one part upon another.

Ask our *rhapsodist*, if you have nothing but the excellence and loveliness of virtue to preach, and no future rewards and punishments, how many vicious wretches will you ever reclaim?—*Watts, Improvement of the Mind*.

Rhāpsodize, *v. n.* Deliver as a rhapsody.
(For example see under *Rhapsode*.)

Rhāpsodomaney, *s.* [(Gr. *rhōgē* + *manēia* = prophecy.)] Divination by means of verses.

There were various methods of penning this *rhāpsodomaney*. Sometimes they wrote several verses or sentences of a poet on so many pieces of wood, paper, or the like; threw them together in an urn, and drew out one. . . . Sometimes they cast dice on a table on which verses were written; and that on which the dice lodged contained the prediction. A third manner was by opening a book, and putting on some verse at first sight. This method they afterwards called the *Bartes* *Præsentine*, and afterwards, according to the poet, thus made use of.
• *Sortes* *Homerici*, *Sortes* *Virgiliani*, &c.—*Rees, Cyclopædia*.

Rhāpsody, *s.* [(Gr. *rhōgē* + *poia*.)] This is the Greek title of each book of the Homeric poems; thus, the first book of the *Iliad* is *Ῥηψόδια* 1. The nasal analysis of the word is *ῥαψω* = I sew or stitch + *οῖον* = song, ode.

The *Rhapsody* was the song of a *Rhapsodist*, or *Rhapsode* (*ῥαψωδιστής*); and a long poem sung piecemeal, the different parts by different singers, was *rhapsodized*. But by changing the process, a series of *rhapsodies* might be made into a long poem. The word is important in historical Homeric criticism.

1. Composer of rhapsodies.

Homer wrote a *rhōgē* of songs and *rhapsodies*, to be sung by himself for small earnings and good cheer, at feasts and other days of amusement; the *rhōgē* he made for the men, and the *rhōgēs* for the other sex. These loose songs were not collected together in the *Epic* form till Pindar's time, about five hundred years after.—*Heuley, Philothesia Lipscensis*, § 7.

Any number of parts joined together, without necessary dependence or natural connection.

Rhātany, *Rhātany-root*, *s.* [Peruvian.] In *Medicine*, a Root of certain plants of the genus *Krameria*.

The root . . . of the *Krameria triandra* . . . is called *rhātany*, a substance that has long been known to the manufacturers of port wine. *Hopier, Medical Dictionary*.

Rhātany-root is collected for medicinal purposes after the rains. . . . The bark of *rhātany-root*, when chewed, tastes bitter, astringent, and at first nauseous. . . . *Rhātany-root* yields its properties partly to cold and partly to boiling water. . . . *Rhātany-root*, distilled in alcohol, yields a deep, reddish-brown tincture, which, when evaporated, leaves a deep red brittle resin. —*Thompson, The London Dispensary*, by *Gardner*, 1852.

This plant was discovered by Ruiz and Pavon, in 1779, in South America. It was introduced to notice in this country, as a medicine, by Dr. Roese, in 1808. In 1813, Ruiz's dissertation on it appeared in an English dress. . . . *Rhātany-root* is brought from Peru. It consists of numerous woody, cylindrical, bare branches, varying in thickness from that of a writing-quill upwards. . . . Foreign or South American extract of *rhātany* is occasionally imported. . . . *Rhātany-root* is adapted to all these cases requiring the employment of astringents. . . . It is sometimes used as a tooth-powder (see with equal parts of orris-root and charcoal). —*Pereira, Elements of Materia Medica and Therapeutics*, 1833.

There is no substance more highly spoken of as a remedy for internal hemorrhages by foreigners, and especially the French, than the extract of *rhātany-root*, the *Krameria* of our Pharmacopœia.—*Sir T. Watson, Lectures on the Principles and Practice of Physic*, vol. i. lxxx.

Rhein-berry, *s.* [? Lat. *rhamnus*.] Buckthorn.

The later herbarists call it in Latin *Rhamnus aditivus*. . . . It is termed . . . in English, Laxative Ram, Waythorne, and Buckthorne; in Low Dutch they call the fruit or berries *Rhijberrien*, that is a rough you should say in Latin *Racem Rhamnus*; in English, *rhijberrien*; in French, *Serpurin*. —*Gervase, Herbal*, p. 1334.

Rhōtoric, *s.* [Gr. *rhōtoric*; Fr. *rhétorique*.] Act of speaking not merely with propriety, but with art and elegance.

uld not allow him . . . who had the best thoughts, and who knew all the rules of *rhōtoric*, if he had not acquired the art of using them. *Dryden, Translation of Desfontaines's Art of Poetry*.

Of *rhōtoric* various definitions have been given by various writers. . . . It is evident that, in its primary signification, *rhōtoric* had reference to public speaking alone, as its etymology implies. But as most of the rules for speaking are of course applicable equally to writing, an extension of the term naturally took place. . . . In the present day, however, the province of *rhōtoric*, in the widest application that would be reckoned admissible, comprehends 'all composition in prose; in the narrow sense, it would be limited to 'persuasive speaking.' I propose in the present work to adopt a middle course between these two extreme points; and to treat of 'argumentative composition' generally and exclusively; considering *rhōtoric* (in conformity with the very just and philosophical view of Aristotle) as an offshoot from logic. A *rhōtoric* *Whately, Elements of Rhetoric*, introduction, § 1.

Rhōtorical, *adj.* Pertaining to *rhōtoric*; oratorical; figurative.

The apprehension is so deeply riveted into my mind, that *rhōtorical* flourish cannot at all lose. . . . —*Dr. H. More*.

Because Brutus and Cæsar met a blackmore, and Pompey had on a dark garment at Pharsalia, these were pretexts of their overthrow, which, indwelt standing are scarce *rhōtorical* sequels; rambling metaphors from realities, and from conceptions metaphorical informing realities again. —*Sir T. Brown*.

When some Carthagenians were pulled up by reason of a faculty which they had of *rhōtoricizing* religiously, St. Paul, like an apostle, tells them, that he would communicate them, and know, not the speech of them that were pulled up, but the power. —*Cudworth, Sermons*, p. 163.

Rhōtorication, *s.* Rhetorical amplification. *Rare*.

When I consider your wealth, I do admire your wisdom; and when I consider your wisdom, I do admire your wealth. It was a two-handed *rhōtorication*, but the citizens took it in the best sense.

And *rheumatism* I send to rack the joints.

Dryden, Fanny and Arcite, iii. 104.

Rhinocéréal. *adj.* Turning up like the horn on the nose of the rhinoceros. *Latinism, coined to suggest the contempt shown by turning up the nose. Ludicrous.*

Juvenesque, senesque,
Crede mihi, namum *rhinocerotis* habent.

(*Martial.*)

Notwithstanding that there is nothing obscure in natural knowledge, and that I intend to give as little offence as may be to readers of a well-bred imagination, I must, for my own quiet, desire the critics (who in all things have been famous for good sense) to refrain from the lecture of this curious tract. I have mentioned a who were formerly marked out and distinguished by the little *rhinocéréal* nose, which was always looked upon as an instrument of derision, and which they were used to cock, toss, or draw up in a contemptuous manner, upon reading the works of their ingenious contemporaries. — *Tatler, no. 200. (Orig. MS.)*

Shall never tremble. — *Shakespeare, Macbeth, iii. 4.*

If you draw your beast in an emblem, show a landscape of the country natural to the beast; as to the rhinoceros an East Indian landscape, the crocodile, an Egyptian. — *Prichard.*

The horn of the rhinoceros . . . had long appeared to me an unusually very deserving examination. Dispersed over the skin are pores, which I have supposed secrete a peculiar fluid. . . . When these pores are separate they produce hairs; when they are confluent and in a line, they produce the nails, the claws, and the hoofs. . . . When the pores are confluent, and in a ring, they furnish the curious case of the horns of the animals of the ruminating class; and when confluent in a circular order, they supply matter for the formation of a solid horn, such as we see in the rhinoceros. — *Burchell, Travels in the Cape.*

The rhinoceros lives gregarious in many parts of Java. . . . In its manners the rhinoceros of Java is comparatively mild. It is rarely seen in a domestic state, but it is occasionally domesticated into pits, and destroyed. — *Horsfield, Zoological Researches in Java.*

The two-horned African rhinoceros, which was formerly frequent within the boundary of Cape Colony, is the animal seen and described by most of the travellers in Africa during the last century; and being then the only two-horned species that was known, received the distinguishing epithet of bicornis; and, however, now a good appellation, from several species having a similar number of like appendages. — *Sir W. Jardine, in Naturalist's Library, Thick-skinned Quadrupeds.*

Rhizoma. *s.* [Gr. $\rho\eta\zeta\omicron\mu\alpha$.] Rootstock.

In some cases, as in the tree ferns of tropical climates, the bases of the decayed fronds form a tall trunk, which is termed their caudex; but when this portion creeps upon the ground, as in the hound ferns of our own climate, it has received the name of rhizoma. — *Henderson, Principles of Descriptive and Physiological Botany, pt. i. sect. 1.*

Rhodium. *s.* In Chemistry. Metal so called.

Rhodium . . . was discovered by Wollaston at the time he was occupied with the discovery of palladium. . . . It is extremely hard, and has a specific gravity of about eleven. — *Turner, Elements of Chemistry, 1817.*

Rhodium . . . was discovered by Wollaston in the ore of platinum. He found the ore from Brazil to contain 8 per cent. of native platinum from another locality has been found with so much as three per cent. of rhodium. . . . *Rhodium* is the most oxidizable of the platinum metals. . . . It appears to form two oxides, the rhodous and the rhodic, of which, however, the last only has been isolated. — *Graham, Elements of Chemistry, 1812.*

Rhododendron. *s.* In Botany. Flowering shrub so called, from the likeness of the flowers of certain species to a rose.

The rhoda leandra will make poets and rafters. — *Erigen, Sylva, iii. 3, § 23.*

The Rhododendron includes genera of some of the most singularly ornamental evergreen and deciduous post-earthy shrubs that adorn our gardens; for what would our American grounds be without rhododendrons and azaleas? The culture of all the species is nearly the same; they all require peat-earth, or at least three parts of it, and some of them will not live without it. They may all be propagated by cuttings of the growing shoots, planted in fine sand, and covered with a glass or by layers; but the best plants of all the species are procured from seed. — *Lindley, Encyclopedia of Trees and Shrubs, p. 583: 1812.*

Rhodostaurótic. *adj.* Rosicrucian, of which it is a Greek equivalent ($\rho\eta\delta\omicron\varsigma$ = rose; $\sigma\tau\alpha\upsilon\tau\iota\kappa\acute{o}\varsigma$ = cross).

Ontis . . .

The good old hermit that was said to dwell
Here in the forest without trees, that built
The castle in the air, where all the brethren
Rhodostaurótic live.

B. Jonson, Masque of Fortunate Talents.
(Saves by H. and W. F.)

Rhomb. *s.* [Fr. *rhombe*; Lat. *rhombus*; Gr. $\rho\eta\mu\beta\omicron\varsigma$.] See third extract.

Save the sun his labour, and that swift
Nocturnal and diurnal rhomb supposed
Invisible else above all stars, the wheel
Of day and night. — *Milton, Paradise Lost, viii. 133.*

See how in wakeful slumber they appear,
In rhombs and wheels, and half-moons and wings.

Id., Paradise Regained, iii. 309.
Rhomb is, in geometry, a parallelogram or quadrangular figure, having its four sides equal, and consisting of parallel lines, with two opposite angles acute, and two obtuse; it is formed by two equal and right angles joined together at their base. — *Trevelyan and Harris.*

Rhombic. *adj.* Slanted like a rhomb.

Many other sorts of stones are peculiarly figured; the meteoric in form of a star, and they are of a rhombic figure. — *Greene.*

Rhomboid. *s.* [Gr. $\rho\eta\mu\beta\omicron\iota\delta\eta\varsigma$; $\rho\eta\mu\beta\omicron\varsigma$ = form.] Figure approaching to a rhomb.

Many other sorts of stones are regularly figured; . . . and they are of a rhombic figure . . . talk of such as rhomboids. — *Greene.*

Rhomboidal. *adj.* Approaching in shape to a rhomb.

Another rhomboidal variety of a compressed form had many others interlaid round the middle of it. — *Woodward.*

Rhomboides. *s.* Greek form of Rhomboid.

Let A G B D be a rhomboides.

Dr. H. More, Song of the Soul, p. 378.

Rhönchus. *s.* [Gr. $\rho\eta\chi\omicron\varsigma$; Lat. *rhönchus* = snoring.] In Medicine. Sound in disordered respiration heard by applying the ear to the chest.

You hear a deeper note, a snoring noise, as the patient inspires or expires—a sound like the creaking of a piston, or the less note of a violin, or the droning hum of an insect in its field; and this is called rhönchus. — *Sir T. Watson, Lectures on the Principles and Practice of Physic, lect. xlviii.*

Rhábarr. *s.* [Lat. *rhubarbarum*, from *Rha*, a name of the river Volga, and *barbarum*, from *barbarorum* = of the barbarians; the countries on the lower part of the Volga being of old, as now, productive of the rhubarbs of the best quality.]

1. In Medicine. Cathartic drug so called.

What rhubarb, senno, or what purgative drug
Would scour these English bowels?

Shakespeare, Macbeth, v. 3.
Having fixed the fontanel, I purged him with an infusion of rhubarb in small ale. — *Hicinson, Surgery.*

2. In Horticulture. Plant so called of which the stalks are used in cookery.

Rhumb. *s.* In Navigation. See extract.

Rhumb, in navigation, [is] a vertical circle of any given place, or the intersection of a part of such a circle with the horizon. *Rhumb*, therefore, coincides with the points of the world, or of the horizon; and hence mariners distinguish the *rhumba* by the same names as the points and wind. But . . . the *rhumba* are denominated from the points of the compass in a different manner from the winds. Thus, at sea, the NE wind is that which blows from the north-east point of the horizon towards the ship in which we are; but we are said to fall upon the north-east rhumb when we go towards the north-east. — *Falmer, Nautical Dictionary.* (Bar)

Rhumbline. *s.* In Navigation. See extract.

The great property of the rhumbline, or loxodrome, and that from which some authors derive it is, that it cuts all the meridians under the same angle. This angle is called the angle of the rhumb, or the loxodromic angle. — *Falmer, Nautical Dictionary.* (Barney.)

Rhyme. *s.* [Gr. $\rho\eta\mu\iota\kappa\acute{o}\varsigma$; Lat. *rhythmus*.]

This origin has often been objected to; and a connection with the A.S. *rim*, *rym*, or *gerim* been suggested. The meaning of this is *number*, and when we consider the closeness of the connection between *numbers* and *metre*, the connection becomes evident. The Danish has *rimelig* = probable, likely, reasonable, in which it agrees with the English *rhyme* and *reason*. Here also the idea of harmony, or propriety, is manifest. It is submitted, however, that without any proof that the German forms themselves are not also connected with *rim*, the words under notice are insufficient to disturb the received etymology. Meanwhile the undoubted German root for *number* is *t-l*, as in the English *tale*, German *zahl*.

Connected with this is the omission of the *h* in the spelling; and, connected with this, the substitution of *i* for *y*. In favour of this, however, the authority of Milton can scarcely be adduced; his

'Things unattempted yet in prose or rhyme.'

Aristotle's

and as such a palpable Italianism.]

1. Harmonical succession of sounds.

The youths with songs and rhymes:
Some dance, some hale the rope.

Sir J. Ingham, Destruction of Troy.

Rhyme is the correspondence which exists between syllables containing sounds similarly modified. . . . Every accented syllable contains a vowel; hence a rhyming syllable may be divided into three parts—the initial consonant or those which precede the vowel, the vowel itself, and lastly the final consonants. *Rhyme* may be divided into different kinds according as one or more of these elements correspond.—*Dr. Gail, History of English Rhythms*, b. l. ch. vi.

2. Consonance of verses; correspondence of the last sound of one verse to the last sound or syllable of another.

The measure is English heroic verse without rhyme, as that of Homer in Greek, and of Virgil in Latin; *rhyme* being an unnecessary adjunct or true ornament of poem or prose verse, in latter works especially, but the invention of a barbarous age to set off wretched matter and lame metre.—*Milton, Paradise Lost*, preface.

Those that write in rhyme still make
The one verse for the other's sake;
For one for sense and one for rhyme
I think sufficient at our time.

Bull, Hudibras, ii. l. 27.

Such was the news, indeed, but songs and rhymes
Prevail as much in the hard times
As would a plump of trembling fowl, that rise
Against an eagle soaring from the skies.

Dryden, Translation of Virgil, Eclogues, ix. l. 15.

In prose our property is greater;
Why should it then be less in metre?
If Cupid throws a single dart,
We make him wound the lover's heart;
But if he takes his bow and quiver,
'Tis our he must transfix the liver;
For *rhyme* with reason may dispense,
And sound has right to govern sense.

Prior, Alma, l. 427.

3. Poetry; poem.

Thou'kest not, and Percie, how the *rhyme* should rage;
Of my temples were disdain'd with wine,
And 'art in whirls of wild yre-twine,
How could I reave the noise on lofty stage!

Spenser, Shepherds' Calendar, October, r.

All his many power it did disperse,
As he were warred with innumerable rhymes,
That oftentimes he quaked.
Id., Fœnic Queen.
Who would not sing for Lycidas? he knew
Himself to sing, and build the lofty rhyme.

Milton, Lycidas, 10.

Things unattempted yet in prose or rhyme.

Id., Paradise Lost, l. 10.

4. Word of a sound to answer to another word.

What wise means to gain it had, then chose?
Know fame and fortune both are made of prose.
Is thy ambition sweating for a rhyme,
Thou unambitious fool, at this late time?

Young, Love of Fame, ii. 275.

Masculine rhymes. Those, in French, ending in a consonant; **Feminine**, those ending in a mute.

Rhythm royal. See extract.

Rhythm royal is a verse of twelve syllables, and twelve such verses make a stanza, whosed the first and third lines do answer (across) in the terminations and the *rhyme*, the second, fourth, fifth, do likewise answer each other in terminations, and the two last do coincide and shut up the sentence; this has been called *rhyme royal*, and surely it is a royal kind of verse, serving best for grave discourses.—*Guicciard, Certain Notes of Instruction*, v. l. b. (Notes by H. and W.)

Rhyme or reason. Number or sense.

I was proud on a time,
To have reason for my rhyme,
But from that time 'till this season,
I received no rhyme or reason.

Twelve-anthel (anaphora) to Spenser.

The guillemets of my mind drove the grossness of
the foggy mist in revolved belief, in despite of the
teeth of all rhyme and reason, that they were fairies.
—*Shakespeare, Merry Wives of Windsor*, v. 5.

Rhyme. v. n.

1. Agree in sound.

But facetted his fudious as they fell,
And if they rhymed and rattled, all was well.
Dryden, Amaloth and Achilophel, ii. 418.

2. Make verses.

These fellows of infinite tongue, that can rhyme
themselves into ladies' favours, they do always
remem themselves out again.—*Shakespeare, Henry V.*
v. 2.

There march'd the bard and blockhead, side by
side,
Who rhymed for hire, and patronized for pride.

Pope, Dunciad, iv. 101.

Rhymed. part. adj. Put into rhyme.

There was not a dozen sentences in his whole
sermon but they ended all in rhyme for the most part:
Some, not well digested, wished the preacher a late,
that with his rhymed sermon he might use some
pleasant melody, and so the people might take
pleasure divers waies, and dance if they liste!—
Wilton, Art of Rhetorique, 1553.

The first (translation of the Psalms) too elegant
for the vulgar use? the other as flat and poor, as
heavily worded, and miserably rhymed, as the
old.—*Bishop King to Archbishop Fisher, Letters*
edited by Parr, p. 567.

Rhymeless. adj. Not having consonance

Naucy lictors
Will catch at us like striguliers, and would rhymers
Ballad us out o' time.

Shakespeare, Antony and Cleopatra, v. 2.

When a rhymor reads his poem to him, he [the
hypocrite] bows a cope, and persuades the press!—
Bishop Hall, Characters, p. 63.

Milton's rhyme is constrained at an age, when the
passion of love makes every man a rhymor, though
not a poet.—*Dryden*.

Rh. 'r, come on, and do the worst you can;
For not you, nor yet a better man.
Id., Translation of Virgil, Eclogues, iii. 77.

Rhymester. s. Rhymor.

Such wondrous ramblements of rhymesters new.

I speak of those who are only rhymesters.—*Dean*.

Rhymist. s. Writer, composer of, rhymes.

Milton's character of Dryden, who sometimes
visited him, was, that he was a good rhymist, but no
poet.—*Johnson, Life of Milton*, (1711 MS.)

Rhythm. s. [Lat. *rhythmus*; Gr. *ῥυθμός*.]

1. Metre; verse; numbers.

The old Italian tunes and *rhythms* both in conceit
and cadence, have much affinity with the Welsh
—*Howell, Instructions for Foreign Travel*, p. 1
1612.

You may find Scaliger refuted for denying poetick
rhythme or meter, (and so not poeise in a strict
sense), to be in Scripture; for St. Hierome is of
another mind; and the impossibility of a *rhythme*
in that language [Hebrew], like our *sonnets*, &c.,
like cadence of words, which are strictly end rhyme,
is by Mallet's instance refuted in Psal. 118, 25.—
Whitlock, Observations on the present Manners of
the English, p. 47: 1674.

Now sportive youth
Carol incoherent *rhythms* with suttile notes,
And quaver unharmonious. *J. Phillips, Cyder*, ii. 443.
Rhythm in its widest sense may be defined as the
law of succession. . . . The rhythmic arrangement
of sounds and articulated phrases music; while
from the law arrangement of articulate sounds we
get the cadences of prose and the measures of verse.
Dr. Gail, History of English Rhythms, b. l. ch. i.

2. Proportion applied to any motion whatever.

hythmical. adj. Harmonical; having one
sound proportioned to another.

The term *rhyme* which we now employ to
tinguish florid from more simple melody, was
to denote that which was simply *rhythmical* in
construction.—*Mason, Three Essays on Church Music*
p. 28.

Riant. adj. [Fr.] Laughing; exulting
laughter.

In such cases the sublimity must be drawn from
the other source; with a strict caution however
against any thing light and risqué.—*Barker, On the*
Sabbath and Beautiful, p. 11, § 16.
Gaiety's childhood is transiency of riant, joyful
character.—*Carlyle, Critical and Miscellaneous*
Essays.

Rib. s. [A.S. *ribbe*.]

1. In Anatomy. Bone forming part of the framework of the chest.

Whose horrid image doth upbraid my hair,
And make my seated heart knock at my ribs,

He open'd my left side, and took
From thence a rib, with cordial spirits warm
And life-blood streaming fresh.

Milton, Paradise Lost, viii. 465.

Dryden, Translation from Horace, b. l. ode iii.

2. Any piece of timber or other matter which strengthens the side.

I should not see the sandy hour-glass run,
But I should think of shillows and of hats;

Vading his high top lower than her ribs,
To kiss her burial.

Shakespeare, Merchant of Venice, l. 1.

The ships with shatter'd ribs were reaving from
the sea.

Dryden.

The rib of a ship answers in many respects to the
rib in an animal frame. The base of the rib is in
the keel as a backbone, and it serves to maintain
generally the cavity of the vessel. A rib is of un-
necess timber in several places scarfed or chucked
together. These timbers beginning from the bottom
are the cross piece or floor, buttocks, top-timbers,
and, if the vessel be of great height, the long-timber
pieces. The ribs are otherwise known as the tim-
bers.—*Brace and Cox, Dictionary of Science, Literature, and Art*.

3. Any prominence running in lines: (as, 'rib of a leaf').

Rib, in Botany, [is] the principal vein or nervure
which proceeds from the petiole into the blade of
the leaf.—*Brace and Cox, Dictionary of Science,*

How many have we known whose heads have
been broken with their own rib.—*Bishop Hall,*
Reverend's Inhabitation, (1711 MS.)

They have a ribaldish tongue.—*Bishop Hall, Re-*
fusa Christi

Ribaldry. s. Mean, lewd, brutal language.

rile prodigies, these men would be dull, and (as
we say) dead on the spot!—*Bishop Hall, Reven-*
ing.

Mr. Cowley asserts that obscenity has no place in
wit; Buckingham says, 'tis an ill sort of wit,
which has nothing more to support it than sacred rib-
aldry.—*Depl. n.*

the rever, milder, and more are distinguished from
each other. *Id., Preface to the Lake and Fables*.

In the same antithesis from these scenes were
wrought.

Embellish'd with good morals and just thought,
True nature in her nobst light you see,
For yet dash'd with by modern gallantry
To trailing jests and insome ribaldry. *Graville*.

It the upward profession of ribaldry were once in
practice among men in office, the clergy would see
their duty and interest in qualifying themselves for
lay-conversation, when once they were out of fear
of being clanked by ribaldry or prophaneity.—
Swift.

Ribbands, in shipbuilding, [are] longitudinal
bands of comparatively thin timber stretching from
stem to stern at different distances from the keel.

to the vessel while yet in skeleton. — *Brace and
Co., Dictionary of Science, Literature, and Art.*

But as the seasons in their circle run,
Open its ribb'd surface to the warmer sun.

Eighteen a shillings a week! Just, most just, thy
censure, upright Pecksniff! Had it been for the
sake of a ribbon, star, or earlet; sleeves of lawn, a
great man's snuff, a seat in parliament, a tap upon
the shoulder from a courtly sword; a place, a party,
or a thriving lie, or eighteen thousand pounds,
even eighteen hundred; — but to worship the golden
calf for eighteen shillings a week! Oh pitiful, pitiful!

Rice-paper. s. See extract.

Some woods contain scarcely any ducts, as many
conifers; and the delicate material of which *rice-
paper* (as it is called) is composed, consists entirely
of cellular tissue. This curious substance is pro-
duced from the herbaceous stems of a species of
Echinomorus, growing in China. The whole stem
is about an inch thick, and resembles a mass of pith
covered by a very thin epidermis. There is, how-
ever, a central column of real pith running through

it. By means of some sharp instrument, the stem is
cut spirally round the axis into a thin lamina, which
is then unrolled, and may be made up into sheets
containing about a foot square of surface. — *Henderson, Principles of Descriptive and Physiological Botany, pt. i. sect. i.*

Rife. *v. a.* Cut spiral grooves in the bore
of a gun.

The object of *rifing* a gun is to give the projectile
a rotation round an axis coincident with that of the
bore. This insures greater accuracy of fire. . . . Both
small arms and cannon are *rifed*; but many in-
conveniences occur in the construction of *rifled* cannon
which are not met with in small arms; especially
that of obtaining guns strong enough to resist the
enormous strain caused by firing large charges with
heavy projectiles, and the impossibility of using
very large shot or shell made of lead alone. . . . The
condition which a *rifled* cannon should fulfil is:
(1) to insure accuracy of fire; (2) to give as high
velocity as possible; (3) to remain uninjured by
repeated work; (4) to be simple in construction. To
insure accuracy of fire, a rotatory motion must be
given to the projectile round an axis coincident
with that of the bore; the axis of the shot must be

stable on leaving the piece; and the shot must have sufficient velocity of rotation (depending on its form, length, and weight) to counteract the tendency which it has to turn over. To give the projectile a high velocity, the gun must be able to stand a large charge of powder; and in order to do this, remaining uninjured, a very strong construction is required.—*H. Beckwith, in Remond and Cox, Dictionary of Science, Literature, and Art.*

The following sentences of the word right (in
addition to the obvious and familiar use of a right
and the adjective right) are extracted from a for-
gotten paper of my own in a periodical: — 'Speak-
ing morally, you are said to have a right to do a
thing, if all persons are morally bound not to hinder
you from doing it. But, in another sense, to have a
right to do a thing is the composite of having no
right to do it, i.e. of being under moral obligation
to forbear doing it. In this sense, to say that you
have a right to do a thing, means that you may do
it without any breach of duty on your part; that
other persons not only ought not to hinder you, but
have no cause to think worse of you for doing it.
This is a perfectly distinct proposition from the
preceding. The right which you have by virtue of
a duty incumbent upon other persons, is obviously
quite a different thing from a right consisting in
the absence of any duty incumbent upon yourself.
Yet the two things are perfectly confounded. —

Rigmarole. *s.* [Fr. *regman-roll*.] This, as shown by Mr. Wright (see Nares) was originally the name of a game in which certain characters were drawn out of a roll by a string attached to each. Its present meaning is a repetition of idle words. Another secondary meaning, long mistaken for the primary, consisted in its application to a well-known collection of deeds, with strings and seals attached, wherein the Barons of Scotland subscribed their allegiance to Edward I.

I dyed what I could to scrape out the scrolls,
Apollo to rise out of her *regman rolls*.
Skellum, Pycny, p. 50.

Alfonso paused a minute—they began
Some strange excuses for his late proceeding;
He would not justify what he had done;

To say the best, it was extreme ill-breeding;
But there were ample reasons for it, none
Of which he specified in this his pleading;

His speech was a fine sample, on the whole,
Of *regmarole* which the Earl'd call *rigmarole*.
Byron, Don Juan, c. l. Stan. classiv.

Used as a proper name.

Mr. *Rigmarole*, believe me, a woman with a butt of sack at her elbow is never long-lived!—*Goldsmith, Essays, ix.*

Id., Rape of Lucrece.

Rigor. *s.* [Lat.] In *Medici*. Rigidity; stiffness; 'rigor mortis'—the stiffness, or rigidity, characteristic of death, also, shivering, fit of shivering. (The *i* here, is sounded long; *rigor*, not as *rigour*).

A right reason, during the *rigor* or cold fit in the beginning of a fever, is of great importance; a long continued *rigor* is a sign of a strong disease; during the *rigor*, the circulation is less quick, and the blood actually stagnates in the extremities, and, pressing upon the heart, may produce congestion; therefore a *rigor* increaseth an inflammation.—*Arbuthnot.*

The cold stage [in fever] of writers—is, in addition to the more important symptoms mentioned above, attended by a sensation of uneasiness or sinking at the epistomium, a sensation resembling cold running down the back, with formication or chills extending over the limbs and general surface; by lividity of the lips and nails; pallor of the skin; the entire anserina, and shuddering, *rigors*, or shiverings, followed by alternating with irregular flushes.—*Copland, Dictionary of Practical Medicine.*

Does not looseness of life, and a want of necessary solicitude drive others into *rigors* that are unnecessary.—*Bishop Saurin.*

This prince lived in this convent, with all the *rigor* and austerity of a capuchin.—*Addi, Travels in Italy.*

4. Strictness; unaltered exactness.

It may not seem hard, if in cases of necessity certain profitable ordinances sometimes be relaxed, rather than all men always strictly bound to the general *rigor* thereof.—*Hosker, Ecclesiastical Polity.*

Heat and cold are not, according to philosophical *rigor*, the elements; but are names expressing our passions.—*Glanville.*

The time degenerate age requires

Severity and justice in its *rigor*;

This awes an impious bold offending world.
Addison, Cato.

Such capering, such vaujouring, such *rigour*, such *rigour*,
North, South, East, and West, we have cut such a figure,

And leave us no friends but Old Nick and Algiers.
T. Moore, Twopenny Postboy.

That strongest oak might seem to overthrow;
The stroke upon his shield so heavy lights,

The stones . . .
Did first the *rigor* of their kind excel,
And snapp'd into softness as they fell.

Rigorous. *adj.* [Fr. *rigoureux*.]

1. Severe; allowing no abatement.

He shall be thrown down the Tarpeian rock,
With *rigorous* hands; he hath resisted law,
And therefore law shall scorn him further trial,
Than the severity of public power.
Shakespeare, Coriolanus, iii. 1.

Are these terms hard and *rigorous*, beyond our capacities to perform?—*Rogers, Sermons.*

2. Exact; strict; scrupulously nice: (as, 'A *rigorous*, demonstration'; 'A *rigorous* definition').

Rigorously. *adv.* In a rigorous manner.

1. Severely; without tenderness or mitigation.

At the end sentence *rigorously* purged,
For I behold them stiffen'd, and with tears
Bewailing their excess, all terror hide.

On every thorn delightful wisdom grows,
In every *rill* a sweet instruction flows;
But some mutant, o'er the whispering *rill*,
In spite of sacred leisure blockheads still. *Young.*

Rill. *v. n.* Run in small stream. *Rare.*

Lo! Apollo, mighty king, let envy,
Ill-judging and remorse, from Lethe's lake,
Draw him immeasurable; while thy favour
Administers to my ambitious thirst
The wholesome draught from Janippe's spring
Gentle, and with soft murmurs gently *rilling*
Adown the mountains where the daphniferous haunt.
Prior, Second Hymn of Callimachus, 148

Rillet. *s.* Small stream.

He paused once, and only once, to draw a long breath, but without raising his eye from the vessel, which, in a few moments thereafter, he laid out at arm's length, to show us a sight. 2. In Botany. Part in monocotyledons cor-
responding with the bark rather than the
true bark itself.

The *rind* of the monocotyledons stem, totally
different from true bark, is generally little developed.
On leafless stems it is a mere epidermis, but on
fleshy rhizomes it sometimes acquires considerable
thickness, and is then found to be composed of
several layers, particularly with three air-vessels, the
whole bounded externally by a few layers of tubular
parenchyma with a rocky outer surface. —Hofmann,
Elementary Course of Botany, § 706.

Rinderpest. s. [German; see Rother.]**Cattle plague.**

The Report of the Cattle Plague Commission (May
1866) renders it necessary to make a few remarks in
addition to those already made. It appears that
within forty-eight hours of the time when the

temperature of the body rises from two to two and
a half degrees of the thermometer. . . . The whole
course of the disease is seven days; but hitherto it
has been erroneously treated as beginning when it
has already existed for four days, and obtained a
fatal hold on its victim. It is confined almost ex-
clusively to ruminating animals, although it may exist in
the sheep and goat. The commissioners unanimously
report that it is propagated only by con-
tact, and that it consists in a poison generated in
the blood and epidermis of being conveyed by inocu-
lation, the increase of the poisonous matter when
the disease is once established being marvellously
rapid. . . . In their third and final report, issued
June 1866, the commissioners adhere to their former
conclusions as supported by microscopic and other
experiments. Having used the highest magnifying
powers, Dr. Besle considers that with regard to the
nature of the change in itself, evidence has been ad-
duced to show that it consists of very minute par-
ticles of matter in a living state, each capable of
growing and multiplying rapidly when placed under
favourable conditions; that the rate of growth and
multiplication of these minute particles far exceeds
that of which the normal germinal matter of the
blood and tissues multiplies, and that they appro-

prize the palatum of the tissues, and even grow at
their expense. —Hendall and Cox, *Dictionary of
Science, Literature, and Art*, in voce *Rinderpest*.

A cattle plague has appeared in the United States.
It is not the *rinderpest*, with which we have
been rendered so familiar, but it appears equally
fatal. . . . The disease, indeed, seems to be more rapid
and violent than any we are yet acquainted with.

The average time within which an attack of the
rinderpest would run its course was considered to
be six or seven days; but the American disease
usually terminates fatally on the third day, and few
cattle live until the fourth day. . . . Professor Gangue
is said to recognize some resemblance in this
American plague to a malady called 'the darr' in
Aberdeenshire, and known in various parts of
Europe. . . . The fact, indeed, that the American
disease only attacks cows is alone sufficient to dis-
tinguish it from the *rinderpest*; but its mode of
propagation is precisely similar, and suggests simi-
lar remedy for anxiety. The *rinderpest*, since it is
infectious to the Russian steppes, may be assumed
to take its origin in some peculiar local circum-
stances; nor does it appear ever to become domes-
ticated in other countries. Even when it is un-
checked, there is reason to believe that it wears
itself out. But this special habitat does not pre-
vent its spreading for a time with the utmost vir-
ulence and working incalculable ruin. —*Times*

And a bright gold ring, and she in —
But, oh, her beauty was far beyond,
The bright gold ring, and the snow-white wound.
Moore, *Irish Melodies*.

circled, cast themselves into a ring, and retired

**7. Sound of bells or any other sonorous
body.**

ring, but a flat noise or rattle. —Bacon.

4. Restrain a hug by a ring in its nose.

But then some prove 'twould cost the clown
To yoke and yoke to ring them. —W. Browne.

5. In Horticulture. See extract.

When a ring of bark is removed from a stem or
branch of a dicotyledonous plant a tumour is formed
at the upper edge of the ring, which indicates a
stoppage to have taken place in the descent of the
elaborated sap. This stoppage by causing an excess
of nutriment to accumulate above the ring, operates
in improving the size and quality of fruits, and will
even occasion a tree to flower and produce fruit
when it would otherwise have developed nothing
but leaves. No increase or at least a very slight one
takes place in the diameter of the trunk below the
ring; but the part above it is more developed than
it otherwise would have been. If a potato be ringed
in this way, the buds in the axilla of its leaves are
developed in the form of little tubers, whilst none
are produced on the main round stems or rhizoma-
mata. —Humboldt, *Penetration of the Scientific and Phys-
iological Indology*, pt. ii. ch. iii. § 190.

certain signification. —Hobbes.

The first of these rivers has been celebrated by
the Latin poets for the gentleness of its course, as

Italy

Used *adjectivally*, or as the first element in
a compound.

So fœtus rivers depend for their water supplies on
the rain falling on the land through which they run,
it is clear that each river, whether entering the
ocean, or terminating in an inland sea or lake, or
losing itself in a sand desert, may be regarded as in-
cluding the natural surface drainage of the whole
tract of land through which runs every branch of
the river and all its tributaries, whether large or
small. Thus the greater part of a continent may be
grazed into a few districts, each designated by the
principal river running through it. Every such dis-
trict is called in physical geography a river-basin;
and the whole group of streams lay-
ing out in a fan-like shape, and which co-
meet with the ocean are called Oceanic; and the
not reaching the ocean, Continental. The blue
part or two such districts is the line of Watershed,
from the German *Wasserscheide*. *Anders, in*

self into our natures, but likewise made the belief of
his being, necessary to the peace of our minds and
happiness of society. *Archbishop Tillotson.*

Where we use words of a loose and wandering
signification, hence follows mistake and error, which
those maxims, brought as proofs to establish propo-
sitions wherein the terms stand for uninter-
ested ideas, do by their authority confirm and rivet.

congrue.

genus *Luciscus* (*rutulus*).

A roach is a fish of no great reputation for his
dainty taste; his spawn is accounted much better
than any other part of him: he is surrounded the
water-plant, for his simplicity and foolishness; and
it is indeed, that roaches recover strength, and grow
in a fortnight after spawning. *L. Walton, Complete*
Angler.

If a judgman meet a roach,
He dare not venture to approach;
Yet still he leaps at flies. *Swift.*

Roch. *s.* [see extract.] 'As spind as a
roach' means firm; stout.

Ray has the expression, as waded as a trout; but
sometimes people will express it, as sound as a roach,
which is by no means a firm fish, but rather other-
wise; and on that account Mr. Thoma surmises it
should rather be sound as a roche, or rock; and it is
certain, the alder of de Rupe, in Yorkshir, was
called Roches-alley, implying that roche was for-
merly the pronunciation of rock here, in some places
at least. *Pepper, Anonymiana, p. 349.*

.*Herb Robert* is of mixed temperature, somewhat cold; and yet both assuring and somewhat humbling, participat-
ing of mixed faculties. *Georch, The Chalk, p. 133: 1633.*

The multitude renowned writers, as they do fencers or wrestlers, who, if they came in *robustiously*, and put for it with a deal of violence, are received for the braver fellows. *B. Junius, Diatribæ, p. 103.*

Robustness, s. Attribute suggested by *Robustious*; quality of being vigorous.

That *robustness* of body, and possession of person, which is the only fruit of strength. *—Sir E. Stanley, Study of Religion, sign. 8 2: 1603.*

Best may confer a *robustness* on my son's limbs,
but will belabour his intellects. *Arbuthnot and Pope.*

Roc, s. Fabulous oriental bird; (best known from the story of Sindbad, in the Arabian Nights).

In ancient Indian mythology, the delicate white stervis about orbiting on a cloud was a flaming swan; and so it was as well in the creed of the Scandinavians. . . . The rising vapour is the one of the Arabian Nights, which travels over its great luminous sea, the sun, and which mounts the sparkling valley of diamonds. *Livingstone, Curious Myths of the Middle Ages, Second Series, Sec.*

Rocambóle is a sort of wild garlic, otherwise called Spanish garlic; the seed is about the bigness of ordinary peas. *Macfuer, Husbandry.*
Garlick, *rocambóle*, and onions abound with a pungent volatile salt. *Arbuthnot, On the Nature and Choice of Aliments.*

Rocambóle . . . is used for nearly the same culinary purposes as the shallot and garlic, is milder than either of them, but is employed to a very limited extent. . . . Sometimes it produces . . . small boils upon the skin . . . used as a substitute both for use and planting. There is only one sort cultivated in Britain. *McIntosh, Book of the Garden.*

Allium cepa is the onion; A. porrum, the leek; A. asenlondum, the shallot; A. scorodoloides, the *rocambóle*. *—Hensley, Elementary Course of Botany.*

Rock. s. [Fr. *roche*.]

1. Vast mass of stone, fixed in the earth.

The splitting *rocks* cower'd in the sinking sands,
And would not dash us with their ragged sides.

Shakespeare, Henry VI. Part II. iii. 2.

These lower *rocks*, or great, bulky stones, are they not manifest fragments?—*T. Burnet, Theory of the Earth*.

The darkness pines, that o'er your *rocks* reclined,
Wave high, and murmur to the hollow wind.

Pope, Eloisa to Abelard.

Used adjectively.

Distilling some of the tincted liquor, all that came over was as limpid and colourless as rock water, and the liquor remaining in the vessel deeply ceruleous.

Boyle.

2. In Geology its import is somewhat wider, and the term applies to masses of earthy matter of which both the form and material vary from that of ordinary crags and stones.

All mineral masses underlying the soil and subsiding of any part of the earth are designated by the geologists *rocks*. The term has long been in use, and is convenient. *Rocks* are either fossiliferous or non-fossiliferous. The recent beds of stratified rocks is always either limestone, sandstone, or clay. Unstratified rocks present modifications of the same materials.—*Austen, in Rees and Cox, Dictionary of Science, Literature, and Art*.

Rock. v. a. [Fr. *roquer*.]

1. Shake; move backwards and forwards.

Dequay.

A living tortoise, being turned upon its back, could help itself only by its neck and head, by pushing against the ground to *rock* itself as in a cradle, to find out the side towards which the inequality of the ground might more easily permit it to roll its shell.—*Rog. in the Window of God manifested in the Works of the Creation*.

2. Move the cradle, in order to procure sleep.

And *rock* the ground whereon these sleepers lie.

'Well, child, what is it—is it money you bring?'

cried the old woman, when Vandykeren entered the room.—'No, mother,' replied Vandykeren,

throwing himself on the only chair in the room,

except the one with the legs cut off half-way up,

upon which his mother was accustomed to *rock*

herself before the grate.—*Marrat, Sharpey's*,

vol. iii. ch. ii.

During this discussion, and indeed during the whole dialogue, Anna had been *rocking* on his chair, with his hands in his pocket, and head thrown cunningly on one side. He looked at Mr. Pecksniff now with such shrewd meaning twink-

ling in his eyes, that Mr. Pecksniff stopped, and asked him what he was going to say.—*Dickens, Martin Chuzzlewit*, ch. xiv.

3. Lull; quiet.

Sleep *rock* thy brain,

And never come mischance between us twain!

Shakespeare, Hamlet, iii. 2.

O lull me, lull me, charming air,

My senses *rock* with wonder sweet;

Soft, like a spirit, are thy feet!

Sung on Aylmer, in Wit Restored, p. 85: 1838.

would have addressed some words to Jonas; but

Rock-doe. s. Species of deer so called.

The *rock doe* breeds chiefly upon the Alps; a

creature of admirable swiftness; and may probably

be that mentioned in the book of Job; her horns

grow sometimes so far backward, as to reach over

her buttocks. *Grev, Museum*.

Rock-dove. s. Pigeon.

The *rock dove*, as the name implies, is a species

which, in its native and wild state, inhabits high

species distinct from the stock dove, was called

Columba livia, on account of its lighter or more

livid tinge colour. *Tarrell, History of British Birds*.

Rock-ruby. s. See extract.

Rock-ruby [is] a name given by lapidaries and

jewelers to the garnet, when it is of a very strong,

but not deep red, and has a tinge of the blue.—

Sir J. Hill, On Facets.

Rock-ruby is of a deep red, and the hardest of all

the kinds.—*Woodward, On Facets*.

Rocket. s. [Italian, *rochetta*.] Artificial

fire-work, being a cylindrical case of paper

filled with nitre, charcoal, and sulphur,

which mounts in the air to a considerable

height, and there bursts.

Every *rocket* ended in a constellation, strowing the

air with a shower of silver squibs.—*Addison*.

When bonfires blaze, your vagrant works shall

rise

In *rockets*, till they reach the wondrous skies.

Garth.

The cartridge [of *rockets*] is similar to that of the

other jets, except in regard to its length, and the

necessity of passing it strongly, and plugging it well;

but it is charged in a different manner. As the

sky-rockets must fly off with rapidity, their com-

position should be such as to kindle instantly through-

out their length, and extricate a vast volume of

elastic fluids. To effect this purpose a small cylin-

dric case is put round the axis, that is, the

central line is tubular. The fireworkers call this

the soul of the *rocket*.—*Cree, Dictionary of*

Arts, Manufactures, and Mines.

Rocket. s. [from Fr. *roquette*; Lat. *crucis*.]

Term applied to certain cruciferous plants

(akin to the stocks, cresses, &c.) of the

genera *Sisymbrium* *Iris* (London), *Cakile*

maritima (sen), and *Barbarea vulgaris* (yel-

low rocket).

Rocket is one of the saltiest furniture.—*Mortimer,*

Husbandry.

Numerous species [of the order Crucifera] are

celebrated for their beauty, of which the wall-flower,

stock, honesty, and *rocket*, are every-day examples.

Rockiness. s. Attribute suggested by

Rockingchair. s. Chair fitted so as to swing backwards and forwards.

Before [the tender] swinging himself in a *rocking-chair*, laid out a large gentleman with his lawn.—*Dickens, Martin Chuzzlewit*, ch. xvii.

Rockinghorse. s. Wooden horse fixed on a frame, by which children may play at riding.

Rockingstone. s. Large stone, or piece of rock, so poised by nature, that whilst a slight force will shake, a large one will not overturn it; in Cornwall called a *logan* or *loggan-stone*. • Barlast, though in his chapter on the rockingstones of Cornwall he especially states that he does not know the meaning of this word, gives it in the Dictionary (Lwyd's) of his Appendix, *logan* = rocking. The connection is more probably with *leck* = stone.

Among the curious rude stone monuments consisting of single stones, we may take some notice of the Gwynnau, *rocking*, or *logan stones*.—*Barlast, Observations on the Antiquities, &c., of the County of Cornwall*, p. 170: 1755.

Behold you huge
And unshewn sphere of living adamant,
Which, poised by magic, rests its central weight
On yonder pointed rock; firm as it seems,
Such is its strange and various property,
It moves obsequious to the gentle touch
Of him whose hand is pure; but to a traitor,
Though 'er'n a giant's prowess carved his arm,
It stands as fixed as Snowdon. (page 202.)

This is meant to describe the *rocking-stone* of which there are several still to be seen in Wales, Cornwall, and Devonshire. They are universally supposed by antiquarians to be Druid monuments; and Mr. Toland thinks, 'that the Druids made the people believe that they only could move them, and that by a miracle, by which they condemned or acquitted the accused, and often brought criminals to confess what could in no other way be extorted from them.' It was this conjecture which gave the hint for this piece of machinery. The reader may find a description of one of these *rocking-stones* in Camden's *Britannia*, in his account of Penbroke-shire; and also several in Barlast. A story of Cornwall. *Mason, Cornubia, and note*.

Rockless. adj. Wanting, destitute of, rocks.

A crystal brook

Is weedless all above, and *rockless* all below.

Dryden.

Rockling. s. [P] British fish of the genus.

Morlin; *M. vulgaris* being the three-bearded, and *M. quinquecirratus* the five-bearded rockling.

In its habits it [the five-bearded] closely resembles the three-bearded *rockling*, and several naturalists consider them only as varieties of one species.—*Tarrell, History of British Fishes*.

Rockrose. s. Native plant of the genus

Helianthemum.

An anonymous writer in the *Linnæa*, whose views are often judicious, would place the *rock-rose* in the neighbourhood of *Muscadine*, *Syctamine*, and *Polygonaceæ*, and next *Portulacaceæ*; an opinion evidently formed upon the supposed importance of a curved embryo, and merely allusion. ... South Europe and the north of Africa are the countries that *rock-roses* chiefly inhabit. They are rare in North America, extremely uncommon in South America, and scarcely known in Asia.—*Lindley, Vegetable Kingdom*.

Rock rose is a name which properly belongs to the *Cisti*, with which the English representatives of the order were once comprised, from the resemblance of some of them to a rose, and their growth on the rock.—*Dr. A. Prior, Popular Names of British Plants*.

Rocksnake. s. Large snake, akin to the Boas, of the genus *Python*.

Rockwork. s. Stones fixed in mortar, in imitation of the asperities of rocks, and used as ornaments in landscape gardening.

The garden is fenced on the lower end, by a natural mound of *rockwork*.—*Addison*.

Rockwork for effect of character requires more consideration than most gardeners are aware of.—*Lindley, Encyclopedia of Gardening*, § 220.

Through the cold north and *rocky* regions run.

Wallar.

2. Resembling a rock.

The rocky orb
Of tenfold adamant, his ample shield.
Milton, Paradise Lost, vi. 254.

3. Hard; stony; obdurate.

I, like a poor bark, of sails and tackling reft,
Rush all to pieces on thy rocky bosom.
Shakespeare, Richard III. iv. 4.

I tell you of the rocky, dirty hearts of men
turned into flesh.—*Bishop Hall, Eccl. of a Christian.*

There are some men of rocky hearts and impassible tempers.—*Novis, On the Beatitudes, p. 46.*

Rococo. adj. [?] Bizarre in the way of architecture and decoration, especially applied to the French style of the times of Louis XIV. and XV.

Interrupted pediments, columns made scroller at the top than they are at the bottom, broken curves and ornaments, tortured in every shape and style, constitute the picturesque but illogical style commonly known as the *rococo*. The English never adopted this style except in their furniture.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Rod. s. [German, *ruthe*.]

1. Long twig.

Some cluze a hazel rod of the same year's shoot,
and this they lunt on to another straight stick of
any wood, and walking softly over those places,
where they suspect the bowels of the earth to be
enriched with metals, the wand will, by bowing to-
wards it, discover it.—*Boyle*.

2. Kind of sceptre.

She had all the royal makings of a queen;
As holy oil, Edward confessor's crown,

Milton, Paradise Lost, xl. 132.

O gentle sheep, I cry'd
Why is thy bit to me alone deny'd?
Mildest of beings, friend to every clime,
Where dost my error, what has been my crime?
Beasts, birds, and cattle, feed thy balmy rod;
The drowsy mountains wave, and seem to nod;
The torrents cease to chide, the seas to roar;
And the hush'd waves reel on upon the shore.
Harte.

3. Anything long and slender.

Let the fisherman . . .
Increase his tackle, and his rod rattle.
Gay, Rural Sports, l. 131.

Haste, ye Cyclops, with your forked rods,
This rebel lion leaves all the woods,
And every four by love is mule,
Some heaven-defying Eneides.
Granville.

4. Instrument for measuring.

Sevenspells was a measuring rod for taking the
dimensions of buildings, and signified the same
thing as pectin, taken as a measure of length.—*Achmet, Tables of ancient China, Weights, and Measures.*

5. Instrument of correction, made of twigs tied together.

If he be tant once so taken idly roguing, he may
punish him with stocks; but if he be found again so
offering, he may scourge him with whips or rods.—*Spenser, View of the State of Ireland.*
I am whipt and scourged with rods,
Nettled, and stung with pines, when I hear
Of Bullingbroke.
Shakespeare, Henry IV. Part I. i. 3.

In this condition the rod of God hath a voice to
be heard, and he, whose office it is, ought now to
expand to the sick man the particular meaning of
the voice.—*Milman*.

Grant me and my people the benefit of thy chastisements; that thy rod, as well as thy staff, may
comfort us.—*Eikon Basilike*.

They trembling learn to throw the fatal dart,
And under rods of rough centurions mark.

As . . . the . . . ate
the instruments of divine displeasure, are throw
into the fire.—*Bishop Atterbury*.

A wit's a father, and a chief a rod;
An honest man's the noblest work of God.

No . . . meek and sober, kneed the sportive child,
No longer trampling at the broken rod.

Shelley, Queen Mab.

Rodent. adj. [Lat. *rodens*, -entis, pres. part. of
rodere = I gnaw. Sometimes an adjective, as a
‘rodent animal’; ‘sometimes a substantive,
i. e. simpl. ‘a rodent’; sometimes with the
Latin phirid, as, ‘the rodentia’—class of
rodents.] In Zoology. Term in the system
of Cuvier, equivalent to *Glires* in the sys-

tem of Linnaeus, applied to the class con-
taining the rats, hares, squirrels, and bea-
vers.

The form of the body in the *rodentia* is generally
such that the hinder parts of it exceed those of the
front, so that they rather leap than walk. In some
of them this disproportion is even as excessive as it
is in the kangaroo. In the whole of this class the
brain is almost smooth, and without furrows; the
orbits are not separated from the temporal fossae,
which have but little depth; and the eyes are al-
together lateral. The inferiority of these animals is
visible in most of the details of their organisation.
Those genera, however, which possess stronger cla-
vicles have a certain degree of dexterity, and use
their fore feet to convey their food to the mouth.—*Owen, in Brande and Cox, Dictionary of Science, Literature, and Art.*

Roddy. adj. Full of rods or twigs.

Rodmont. s. [*Rodmonte*, one of the lead-
ing characters in the Orlando Innamorato
of Boiardo, and the Orlando Furioso of
Ariosto, a brave, but bragging, hero.] As
such, the word is a *proper*, rather than a
common term. It suggests, however, like
Hector and *Thraso*, the notion of boastful-
ness. ‘The word,’ writes Mr. Hallam,
in his Introduction to the Literature of
Europe, ‘is said to have been invented
by Boiardo. Castelvetro asserts that the
names Gradasso, Mandricardo, Sobrino,
and others, which Boiardo has given to
his imaginary characters, belonged to
his own persons of Scandinavian, and some
have improved upon this by assuring us,
that those who take the pains to ascertain
the fact, may still find the representa-
tives of these sonorous heroes at the
plough, which, if the story were true,
ought to be the case. But we may give
him credit for talent enough to invent
these appellations; he hardly found an
Albracca on his domains, and those who
grudge him the rest, acknowledge that in
a moment of inspiration, while hunting,
the name of *Rodmont* occurred to his
mind.’ The editor, however, agrees with
Mr. Cox (in Brande and Cox’s Dictionary),
that it was rather formed out of the Greek
or Latin *Rhodonanthus*. Sometimes it is
wrongly, as an Italian word, spelt with *h*,
as *Rhodonmontade*.

He vapoured; [but] being pretty sharply admo-
nished, he quickly became mild and calm, a postero-
ill-becoming such a *rodmont*.—*Sir T. Herbert, Memorials of King Charles I.*

Rodmont. adj. Bragging; vainly boasting.

Don, a Spanish reader,
Who had thought to have been the leader
(Had the match gone on)
Of our ladies one by
And triumph’d our whole nation,
In his *rodmont* fashion.
R. Johnson, Masque of Owls.

Rodmontade. s. Empty noise, bluster, or
boast; rant.

He only serves to be sport for his company; for
in these gamesome days men will give him hints,
which may put him upon his *rodmontades*.—*Dr. H. More, Government of the Tongue.*

He talks extravagantly in his passion, but if I
would quote a hundred passages in Don Juan’s
Colloquies, I could show that the *rodmontades* of
Alonso are neither so irrational nor impossible,
for Cyprius threatens to destroy nature.—*Dryden*.

Used adjectively.

The liberties of painting have no other model
but a *rodmontade* genius, and very irregular, which
violently hurries them away.—*Dryden, Translation of Dufrenoy’s Art of Painting.*

A *rodmontade* title-page was a great favourite
in the last century. There was a time when the
republic of letters was over-built with ‘Palaces of
Memory,’ ‘Palaces of Honour,’ and ‘Palaces of Elo-
quence,’ with ‘Temples of Memory,’ and ‘Theatres
of Human Life,’ and ‘Amphitheatres of Providence,’
‘Pharos,’ ‘Gardens,’ ‘Pictures,’ ‘Treasures.’ The epis-
tles of Cicero dazzled the public eye with their
splendid title, for they were called ‘Golden Epistles’;
and the ‘Golden Legend’ of Voragine had been more
appropriately entitled *Golden*.—*J. Dacier, Curious-
ties of Literature, Titles of Books.*

Rodmontade. v. n. Boast after the manner
of a Rodmont.

Rodomontadist. s. Rodomontador. *Rare*.
When the *rodomontadist* had ended his story, it
was dinner-time.—*Terry, Voyages to the East Indies*,
p. 107: 1605.

montade.

Regardless of the *rodomontades* of that treacher-
ous enemy.—*Sir T. Herbert, Relations of some Years’
Travel into Africa and the Great Asia*, p. 100.

domontades*.—*Beaumont and Fletcher, Coronation.*

Rodomontador. s. Bonster.

The Andalusians seem to be the greatest talkers
and *rodomontadores* of Spain.—*Guthrie, Geography*,
Spain.

Roe. s. Roebuck.

Thy greyhounds are eye faster than the *roe*.
Shakespeare, Timing of the Shrew,
induction, sc. 2.

Ladies, withdraw, the gallants are at hand.—
Whip to our tents, as *roe* run over land.

Id., *Love’s Labour’s lost*, v. 2.
Procure me a Troglodytic footman, who can catch
a *roe* at his full speed.—*Arbutnot and Pope*.

Roe. s. Eggs of fish.

Here comes *Rome*.—
Without his *roe*, like a dried herring.
Shakespeare, Romeo and Juliet, ii. 4.

Roebuck. s. Native deer so called; *Cervus*
capreolus.

He would him make
The *roebucks* in their flight to overtake. *Spenser*.
The *roebuck* was formerly very common in Wales,
in the north of England, and in Scotland, but at
present the species no longer exists in any part of
Great Britain except the Scottish highlands. Ac-
cording to Dr. Monst, it was found in Wales as late
as the reign of Queen Elizabeth, and in great plenty
in the Cheviot Hills, according to Leland, in that of
Henry VIII.—*Pennant, British Zoology*.
The *roebuck*, of much smaller size than either of
our other indigenous deer, exhibits a degree of bold-
ness and agility in its leaps, which fit it for its fa-
vourite haunts, and almost claim for it the analogi-
cal appellation of the chamois of the cervine family.
—*Bell, History of British Quadrupeds, including the*
Glacera.

Roestone. s. In Geology. Variety of oolite
so called, its structure suggesting the com-
parison with the *roe* of a fish; to a certain
extent the two words (oolite from *ovum* =
egg) translate one another.

Rogation. s. [Fr.] Litany; supplication.
He perfecteth the *rogations* or litanies before
in use, and addeth unto them that which the
present necessity required.—*Hooker, Ecclesiastical*
Polity.

Supplications with this solemnity for appeasing
of God’s wrath, were of the Greek church termed
litanies, and *rogations* of the Latin.—*Jeremy*
Taylor.

In the letters of Silius Apollinaris, we find the
Bishop of Clermont writing to Anicetus, the Bishop
of Vienne, for the form of certain litanies or *roga-
tions*, which were used in that city during an earth-
quake and conflagration; he proposes to institute
the same solemn ceremonies in apprehension of the
invasion of the Goths into Provence.—*Milman, His-
tory of Latin Christianity*, b. iii. ch. ii.

Rogation-flower s. Native plant (*Polygala*
vulgaris) so called from flowering in Rogu-
tion week; milkwort.

Milkwort is called by Dodonæus, *Florambarralis*;
so called because it doth especially flourish in the
Crosse or Gangeweek, or Rogation weeks, of which
flours the maidens which use in the countries to
walk the procession do make themselves garlands
and nosegays: in English we may call it Crosse-
flower, Procession-flower, Gangeweek, *Rogation*-
flower, and milkwort, of their virtues in procuring
milk in the breasts of nurses. . . . It is vulgarly
known in Cheshire to the herb-women by the
name of hedge hyssop; for they take it for Gratiola,
or hedge hyssop, and sell it to such as are ignorant
of the name.—*Gerarde, Herbal*, p. 561: 1633.

Rogation-week. s. Second week before
Whitsunday; thus called from three fasts
observed therein, the Monday, Tuesday,
and Wednesday, called *rogation* days, be-
cause of the extraordinary prayers and
processions then made for the fruits of the
earth, or as a preparation for the devotion
of holy Thursday.

Rogérian. s. ? Wig so called. *Obsolete*.
He lights, and runs, and quickly has his speed.
To overtake his overrunning head;
The sportfull while to mocke the headlong man,
Tosses away his plumed *rogérian*.
Bishop Hall, Satires, iii. v. (Nares by H. and W.)

Rogue. s. [P.]

1. Wandering beggar; vagrant; vagabond.
For fear lest we, like rogues, should be reputed,
And for ear-marked hands above be levited.
Spenser, Mother Hubbard's Tale.

The sheriff and the marshal may do the more good, and more fairly the idle rogues.—*Id., View of the State of Ireland.*

The scum of people and wicked condemned men... upolish the plantation; for they will ever live like rogues, and not fall to work, but be lazy and do mischief.—*Idem, Essays, Of Plantations.*

2. Knavish; dishonest fellow; villain; thief.

Thou kill'st me like a rogue and a villain.
Shakespeare, Twelfth Night, iii. 4.

A rogue upon the highway may have as strong an arm, and take off a man's head as cleverly as the executioner; but then there is a vast disparity when one action is murder, and the other justice. *South, Sermons.*

pression. The introduction of composition rollers in
place of set galleys has been the cause of a com-
plete change in printing. But for this invention,

sheepskins failed from the necessity of joining the
edges.—*R. J. Corbridge, in Brande and Cox, Dictionary of Science, Literature, and Art*.

Romance, s.

1. Military fable of the middle ages; tale of wild adventures in war and love.

What romances
In fact romance of Cæsar's son.—*Milton, Paradise Lost, l. 573.*

Romance has been elegantly defined as the off-
spring of fiction and love. Men of learning have
ad themselves with tracing the epochs of
romances; but the condition is desperate which
would fix on the inventor of the first romance; for
what originates in nature, a thousand lugs to detect the
shadowy outlines of its beginnings? The Theagenes
and Charicles of Heliodorus appeared in the four-
teenth century; and thus elegant points was the Grecian
Fædion. It has been prettily said, that posterior
to be the children of the marriage of
Theagenes and Charicles. The Romance of 'The
Golden Ass,' by Apuleius, which contains the beau-
tiful tale of 'Cupid and Psyche,' remains unrivalled;
while the 'Daphne and Chloe' of Longus. In the old
version of Anyot, is impressively delicate, simple,
and functional, but sometimes offends us, for nature
there 'plays her virgin fancies.'—*J. Durrant, Cur-
riculum of Literature, Romances*.

Fair cousin mine, the golden days,
Of old romances are o'er,
And minstrels now can naught for lays,
Nor ballads for a lover.—*W. M. Praed*.

The age of romance has not ceased; it never
ceased; it does not, if we think of it, so much as
very sensibly decline. . . . 'Great passions no longer
show themselves.' Why there are passions still
great enough to replenish fiction. . . . A passion
that explosively shivers under the life it took rise
in, ought to be regarded as considerable; more no
passion, in the highest hey-day of romance, yet still.
—*Carlyle, Critical and Miscellaneous Essays, The
Diamond Necklace, ch. i.*

[The name of *romance* was subsequently appropriated
in different countries to different kinds of writings,
according to the form which the popular literature
took in each. In Spanish it came to signify a ballad.
In English, where the literature began with trans-
lations from the French, the name was commonly
given to the French original, but was subsequently
used in the sense the word had acquired in French,
of a story of fiction.—*Waggon, Dictionary of
English Etymology*.]

Used adjectively.

The Latin language ceased to be regularly spoken

Pierri and Cabaret, who make it less ancient by two
hundred years.—*J. Walton, Essay on the Writings
and Genius of Pope, l. 291.*

Rondeau, s. [Fr.] See extracts; also Roundel.

Rondeau [R] is a kind of ancient poetry, commonly consisting of thirteen verses; of which eight have one rhyme and five another: it is divided into three couplets, and at the end of the second and third, the beginning of the *rondeau* is repeated in an equivocal sense, if possible.—*Freeman*.

He used to read to him a book of sonnets, *rondeaus*, and *virolays*. *T. Warton, History of English Poetry*, vol. iii. p. lxxvi.

Rondeau has very justly measured the writing and setting of vocal *rondeaus*, in which the thought is begun in one strain, and continued or ended in another; or begins with a simile, of which the application is made in the second strain. . . . But . . . after pointing out poetical and musical defects in the composition of *rondeaus*, . . . [he] indicates the means of avoiding both. 'Whenever a sentiment, expressed in the first strain suggests a reflexion which confirms and enforces the second; . . . very true, in short, that the first strain contains a proposition to perform some action, and a reason for it is given in the second; in these and similar cases a *rondeau* will be always well planned.'—*Rees, Cyclopaedia*.

What chiefly distinguishes the *roof* from the crow is the bill, the nostrils, chin, and sides of that, and the mouth, being in old birds white and bare of feathers, by often thrusting the bill into the ground in search of the 'crum' of the dor-beetle. The *roof*, then, instead of being persecuted, should be treated as the farmer's friend.—*Lyons, British Zoology*.

The balance between injury or benefit derived from the *roofs* by the agriculturists, is a question which general opinion seems to have settled, by considering that the occasional injury is much more than counterbalanced by the amount of benefit conferred in the consumption of thousands of destructive grubs of the common cockchafer, the wire-worms of several sorts, and . . . the larvae of the insect commonly known by the name of harry-long-legs.—*Tarrell, History of British Birds*.

The information was unnecessary; for the incessant cawing of the *roofs* sufficiently indicated their whereabouts.—*Dickens, Pickwick Papers*, ch. vii.

There are not wanting instances where long-established *rooferies* near a mansion have been deserted by these birds when it has happened that the house has been pulled down, or even abandoned as a habitation. . . . Among the pagans (in old tyme) those, that invited any, shewed them the doore threshold, saying

The *rose-elder* groweth in gardens, and the flowers are there doubled by art, as it is supposed. . . The *rose-elder* is called in Latine, *Sambucus rosea*, and *Sambucus aquatica*, being doubtless a kind of the water elder. . . It is called in Dutch *Gheldersche rose*; in English, *Gelders rose* and *rose elder*.—*Gerarde, Herball*, p. 1125: 1633.

Rose-engine, *s.* [two words.] *chanira*. See extract.

A *rose-engine* [is] an appendage to the turning-lathe, by which a surface of wood or metal, as a watch-case, is engraved with a variety of curved lines. The assemblage of these lines presenting some resemblance to a full-blown rose, is called by the French *rosette*; and hence the engine by which the ornament is produced is called a *rose-engine*. The mechanism by which the figure is produced is composed of one or more plates or cones set on the axis of the turning lathe, or suitably pointed and formed with waving edges or grooves, which govern, in a manner corresponding to the pattern of the elms or grooves, the movement to or from the centre of the cutting point. The combination of the rotatory motion of the lathe and the radial motion of the

tool cuts figures corresponding to the nature of the radial motion given.—*Brande and Cox, Dictionary of Arts, Manufactures, and Mines*.

Rose-noble, *s.* [two words.] Ancient English gold coin, in value the third of a pound.

The succeeding kings coined *rose-nobles* and double *rose-nobles*.—*C Camden, Remains*.

Rose-willow, *s.* [two words.] Native plant so called, (species doubtful).

The *rose-willow* groweth up likewise to the height and thickness of a shrubby tree; the body whereof is covered with a scabbed rough bark; the branches are many whereupon do grow very many twigs of a reddish colour, garnished with small long leaves, somewhat whitish; among which come forth little flowers, or rather multiplication of leaves joined together in forme of a rose, of a greenish white colour, which do not only make a gallant show, but also yield a most cooling aire in the heat of summer, being set up in houses for the decking of the same. . . These willows grow in divers places of England: the *rose-willow* groweth plentifully in Cambridgeshire; by the rivers and ditches there in Cambridge town they grow abundantly, about the places called Paradise and Hill Mouth, in the way from Cambridge to Grantham.—*Gerarde, Herball*, p. 1301: 1633.

Rose-window, *s.* [two words.] See extract.

Rose-window [is] a name sometimes given to a circular window, otherwise called a *Catharine wheel*.—*Glossary of Architecture*.

Roscal, *adj.* Rosy; like a rose in smell or colour.

The *rosall* colour, which was wont to be in his visage, [was] turned into sallow.—*Sir T. Elyot, Governour*, fol. 126.

From *rosal* Aurora's door Fair Titan shaked his locks, and marched out.

Boyle.

Rosed, *adj.* Crimsoned; flushed.

Can you blame her, being a maid yet *rosed* over with the virgin crimson of modesty, if she deny the appearance of a naked blind boy?—*Shakespeare, Henry V.* 2.

Rosemary, *s.* Plant of the order Labiata (akin to the lavenders, mints, &c.), of the genus *Rosmarinus*.

Bodiam beggars, with roaring voices, Strike in their mould'd and mortified bare arms, Pins, wooden pricks, nails, spikes of *rosemary*; And with this horrid edge, from how farum . . . Inform their charity. *Shakespeare, King Lear*, ii. 3.

Wild thyme and savory set around their cell, Sweet to the taste and fragrant to the smell; Set rows of *rosemary* with flowering strow.

De Witt, Translation of the Georgics, iv. 43.

Rosemary is a small, but very odoriferous shrub; the principal use of it is to perfume chambers, and in devotion for washing.—*Mortimer, Husbandry*.

Rosepink, *adj.* Having the pink colour, or tinge, of a rose; delicate.

Attending the heroic . . . he falls almost at once into the *rosepink* sentimental.—*Carlyle, Critical*

Roquette, in Military language [is] an ornamental bunch of ribbands, or cut leather, which is worn both by officers and soldiers in the British service, on the upper part of their cuffs. *Roquette* [are] two small bunches of ribbands that are attached to the loops by which the girth of an officer is suspended upon his chest. The colour of the ribband must correspond with the facing of the uniform.—*Rees, Cyclopaedia*.

Shakespeare, Twelfth Night, i. 1.

His drink should be cooling; as fountain water with *rosewater* and sugar of roses.—*Wiseman, Surgery*.

Rosewood. *s.* Ornamental furniture wood so called; the term being applied to the wood of several very distinct trees: (often used *adjectivally*).

She left the novel half uncut
Upon the rosewood shelf;
She left the new piano shut;
She could not please herself.

Traveller, The Talking Oak.

Rosewood is produced in Brazil, the Canary Islands, in Siam (whence it is largely imported by the Chinese), and in other places. It is in the highest esteem as a fancy wood. . . . The width of the log imported into this country averages about twenty-two inches, so that it must be the product of a large tree. — *McCulloch, Dictionary of Commerce.*

There are various kinds of rosewood. That of the Canary Islands, valued for its fragrance, has been already noticed. The more important, however, are the valuable South American ornamental timbers so designated, and which appear to be produced by several species of Dalbergia. That most esteemed, obtained from Rio Janeiro, is said to be chiefly produced by *D. nigra*; but inferior sorts are probably yielded by *Macaranga* *frumosa*, inescapable, and *legale*—trees which bear the name of Jacaranda in Brazil; and it is also attributed by Lindley to species of *Tridactylon*. Some of the species of *Pterocarpus*, again, yield timber so called, African rosewood being the produce of *P. erinaceus*, and Burmese rosewood that of *P. indicus*. Some of the Indian rosewoods are attributed to *Dalbergia latifolia* and *D. missillia*. — *More, in Brander and Cox, Dictionary of Science, Literature, and Art.*

Rosewort. *s.* In Botany. Native plant of the genus *Rhodiola roseorum*: (*wort* = root).

Rosewort hath many small, thick, and fat stems, growing from a thick and knobby root. . . . Some have thought that it hath taken the name Rhodia of the island of the Mediterranean sea called Rhodes; but doubtless it took his name Rhodia Radix of the root which smelleth like a rose; in English *rose-red* and *rosewort*. There is little extent in writing of the families of *rosewort*; but this I have found, that if the root be stamped with oil of roses, and laid to the temples of the head, it cures the pain of the head. — *Gerarde, Herball*, p. 152: 1633.

Rosieracian. *s.* Member of the real or supposed Order or Society of the Rosy Cross, two of the regulations of which, by enjoining secret meetings, and by forbidding (for a certain time at least) the publication of certain secret regulations, commanded no little attention in the sixteenth and seventeenth centuries; sometimes it was condemned for quackery, sometimes spoken of with veneration as the mysterious possessor of certain secrets. See last extract.

A mysterious knock . . . that lies locked up in the brain or breast of some chosen man, that, like the *Rosieracian*, will not yet reveal it. — *L. Wallon, Complete Angler*.

Cross stands for lux, light, because the figure of the cross exhibits the three letters of which the word LUX is formed; and light is what, in the opinion of the *Rosieracians*, when properly modified, produces gold. And of all natural bodies, dew is the most powerful dissolvent of gold. — *Mosheim, Ecclesiastical History*, century xvii.

From . . . a Treatise on the Laws of the *Rosieracians*, by Ritter von Maier (1819), we learn that the fraternity had six fundamental laws: 1. That their chief end and object was to cure the sick without fee or reward. 2. That in travelling they were to change their habits and dress, so as to accommodate themselves to those of the countries in which they sojourned. 3. To meet once a year on a certain day and at a certain place, kept secret from the rest of the world. 4. To fill up vacancies in their body by electing fresh members. 5. To use the letters R C as their common symbol. 6. That the fraternity should remain undivided for one hundred years from its foundation. It appears probable that the device of the rose issuing out of the cross, which was the same as Martin Luther's seal, was adopted for the purpose of attracting the notice of the religious: the rose was explained to represent the blood of Christ. It would appear from these laws that some species of secret Freemasonry was intended; and the *Rosieracians* have been by many connected with the Freemasons; but there is, in point of fact, no evidence that any such society existed at all. . . . The *Rosieracians* have been connected in various ways, by public opinion, with the Cabalists, Illuminati, &c.; and the division of spiritual beings inferior to the angels into *gryphs* and *gnomes*, which furnished Pope with the machinery of the Rape of the Lock, is of *Rosieracian* or Chablistic origin. It is found in that singular work by a professed *Rosieracian*, the Comte de Melis, which obtained a sudden popularity in the beginning of the last century. — *Brander and Cox, Dictionary of Science, Literature, and Art.*

Rosieracian. *adj.* Relating to the Rosieracians.

Rosieracian virtuosus

Can see with ears, and hear with noses;
And, when they neither see nor hear,
Have more than both scold and swear,
That makes 'em in the dark see visions!

Butler, Hudibras, lib. 3, 13.

Rosier. *s.* [Fr.] Rose-bush.

Her yellow golden hair

Was truly worn, and in tresses wrought,
No other fire she on her head did wear,
But crowned with a garland of sweet *rosiers*.

Spenser, Faerie Queene.

Rossil. *s.* Rossel.

Rossil, in rural economy, [is] a term applied to such land as is neither light nor heavy, being a medium between sand and clay; it is sometimes written *rossilla*. — *Rees, Cyclopædia*.

Rosin. *s.* [resin]; it is convenient to treat the two forms as distinct words; the form in *e* being, etymologically, the correct one. It is used in Chemistry, and scientific works in general. The form in *o*, on the other hand, is colloquial, and common in the vocabulary of the useful arts.]

1. The resinous element of turpentine; i.e. the part remaining after the spirit, or so-called oil, of turpentine has been separated by distillation; colophony.

The hollows from the knifing grow retire,

Pitch, resin, seaweed on red wings aspire. — *Garth*.

2. Resin; resinous extractive.

Tea contains little of a volatile spirit; its *rosin* or fixed oil, which is bitter and astringent, cannot be extracted but by rectified spirit. — *Arbuthnot, On the Nature and Choice of Air*.

All these juices, which are distinguished by the name of turpentine, are considered as composed of two ingredients; namely, oil of turpentine and *rosin*. When the turpentine is distilled over, and the *rosin* remains behind. — *McCulloch, Dictionary of Commerce*.

Rosin, although very soluble in alkaline menstrua, is not, however, susceptible, like fats, of being transformed into an acid, and will not of course saponify, or form a proper soap by itself. The more caustic the alkali, the less consistency has the resinous compound which is made with it. Hence fats of some kind, in considerable proportion, must be used along with the *rosin*, the minimum being equal parts, and then the soap is far from being good. As alkaline matter cannot be neutralized by *rosin*, it preserves its peculiar acrimony in a soap poor in fat, and is ready to act far powerfully upon wooden and all other animal fibres to which it is applied. — *Croft, Dictionary of Arts, Manufactures, and M.*

Rosin. *v. a.* Rub with resin.

Rosined. *part. adj.* Sealed, or rubbed, or otherwise prepared with rosin: (in the extract it means rubbed upon, or passed over, resin).

Homageous who could sweetly sing,

Or with the *rosined* bow toward the string.

Camp, Shakespeare's Week, Saturday, 23.

Rosiness. *s.* Attribute suggested by Rosy; state or quality of being rosy.

As the fair moon looks through her *rosiness*.

S. W. Hartwell, Goodnight, b. iii.

Some may delight themselves in a black skin, and others in a white; some in a gentle natural *rosiness* of complexion. — *Spenser, Canto*.

Rosiny. *adj.* ? Russely.

The best soil is that upon a sandy gravel or *rosiny* sand. — *Sir W. Temple*.

Rosland. *s.* See Rossel.

Rossil. *adj.* [entered in the preceding editions as a substantive, which the extract permits, but does not constrain, us to consider it. The word is Celtic, the Welsh giving *rhosawl* = of a parching nature; *rhosawg* = abounding with dry grass; *rhosydd* = tending to be parched; *rhos* = that is parched, a dry meadow, moor; *gwair rhos* = moorland hay. It forms the name of many places. See Owen Pughe's Welsh Dictionary. Here all the dissyllabic forms are adjectival. There is nothing, however, to prevent the word under notice being used as a substantive; the present remarks being made upon its place as a part of speech so far as as it is determined by its derivation.] Light (as land) either from being moory

or gravelly. In Bailey, *Rosland* is explained as 'healthy land, or full of ling; also watery or moorish land.'

A true *rosal* or light land, whether white or black, is what they are usually planted in. — *Mortimer, Husbandry*.

Rossely. *adj.* Friable. *Obsolete or provincial.*

In Essex, moory land is thought to be the most proper: that which I have observed to be the best soil is a *rossely* top, and a brick earthy bottom. — *Mortimer, Husbandry*.

Roster. *s.* See extract.

[*Roster*, in military language, [is] the list of persons liable to a certain duty; *Bavarian, der roster*, *Wacht-roster* (is) the list of those who are to take the watch: probably from *roster*, the common word for a list in German. — *Widdowood, Dictionary of English Etymology*.]

Rostle. *s.* [Lat. *rustellum*.] Beak. *Rare.*

'Verbe rostratus,' a beak or lever with an iron point or end; a *roster*. — *Noncevaler*, (Savoy by H. and W.)

Rostr. *s.* See Rostrum.

Róstral. *adj.* Having some resemblance to the beak of a ship, or rostrum.

Commerce *rostrated* crown upon her he
and kept her eyes fixed upon a rumpus. — *Tadri*, no. 161.

Róstrated. *adj.* Adorned with the beaks of ships.

He brought to Italian hundred and ten *rostrated* galleys of the fleet of Milvianus. — *Abbatini*.

Róstrum. *s.* [Lat. = beak.] The extracts show how (from its application to that part of the vessel with which the ancient ships pierced or run down each other) it has come to signify a scaffold, platform, pulpit, or any place whence an orator may make an address. They also show that, as the original structure was named *rostrum* (i.e. was plural), the ordinary form *rostrum* is justified on the grounds of its currency rather than its strict correctness. 'Inde . . . women *rostra*, a pulpit, or tribunal, in the Roman Forum where those who addressed the people stood. . . . Prætor, concione advocata, cum C. Lælio in *rostra* ascendit, mounted the *rostrum* (more correctly the *rostra*) or common pleading-place.' (See Facciolati by Bailey.)

1. Scaffold whence orators harangued.

Vespasian erected a column in Rome, upon a top was the prow of a ship, in Latin *rostrum*, gave us to the common pleading place in Rome, where orations were made, being built of the of those ships of Antiquum, which the Romans overtook. — *De la Harpe, On Pleading*.

Myself will mount the *rostrum* in his favor,
And strive to gain his pardon from the people.

Abbatini, Cato, lib. i.

Equestrian statues of the two consuls by whom this great war had been brought to a conclusion, were set up in the forum, and the beaks of the Antiquum ships were affixed to the front of the circular stand or gallery between the comitium and the forum, from which the tribunes were accustomed to address the people. From this circumstance it derived its well-known name of *rostrum*, or the beaks. . . . Hansen, judging from the views of the *rostrum* given on two coins in his possession, supposes that it was a circular building, raised on arches, with a stand or platform on the top, bordered by a parapet; the access to it being by two flights of steps, one on each side. It fronted towards the comitium, and the *rostra* were affixed to the front of it, just under the arches. Its form has been in all the main points preserved in the woodcuts, or circular pulpits, of the most ancient times. . . . also had two flights of steps leading up to them one on the east side, by which the speaker ascended, and another on the west side, for his descent. — *Arnold, History of Rome*, ch. xxix. and note.

Róstra, or the beaks, was the name applied to the stage in the Forum, from which the orators addressed the people. This stage was called the *Trupium*, because it was consecrated by the figures; but it obtained its name of *rostrum* at the conclusion of the great Latin war, when it was adorned with the beaks (*rostra*) of the ships of the Antians. The Greeks also mutilated galleys in the same way, for the purpose of trophies; this was called by them *asparganeia*. — *Dr. W. Smith, Dictionary of Greek and Roman Antiquities*.

2. See extract.

Róstrum [is] the pipe which conveys the distilling liquor into its receiver in the common alembics;

also a crooked scissors which the surgeons use in some cases for the dilatation of wounds.—Quincy.

Rôsy. adj. [Lat. *roseus*.]

1. Resembling a rose in bloom, beauty, colour, or fragrance.

When the *rosy* linc'd morning fair,
Wary of aged Titian's saffron bed,
Had spread her purple robe through dewy air. *Spenser.*

A spile that glow'd
Celestial *rosy* red, lov'd's purer hue. *Milton, Paradise Lost*, viii. 613.

Fairest blossom! do not slight
That age which you may know so soon:
The *rosy* morn resigns her light,
And milder glory to the noon. *Waller.*
As Thessalian steeds the race adorn,
So *rosy* coloured Helen is the pride
Of Lacedæmon and of Greece beside.
Dryden, Epithalamion of Helen and Menelaus.
While blooming youth and gay delight
Sit on thy *rosy* cheeks confest.
Thou hast, my dear, unaltered right
To triumph o'er this destined breast. *Prior, Odes.*

2. Made in the form of a rose.
His cloak with orient velvet quite lined through,
His *rosy* ties and garter so verdant. *Be Jonson, Epigrams*, 95.

Rôsy-checked. adj. Rubdy.

Once, moreover, there stood another monument
erected near Lincæne, in commemoration of this
event [Till's shooting at the arrow on his son's
head] a wooden block, painted to look like granite,
surmounted by a *rosy-checked* spire transfixed by a
golden arrow. *Rivington, Curious Myths of the
Middle Ages, First Series, William Tell.*

Rot. v. n. Putrify; lose the cohesion of its parts.

A man may *rot* even here.—*Shakespeare, King
Lear*, v. 2.

From hour to hour we ripe and ripe,
And then from hour to hour we rot and rot.
Id., As you like it, ii. 2.

Being more nearly exposed to the air and weather,
the bodies of the animals would suddenly corrupt,
and *rot*; the bones would likewise all *rot* in time,
except those which were secured by the extraordinary
strength of their parts. *Woodward.*

The very deep did *rot*, O Christ,
That ever these things should be;
Yes, almighty things did crawl with bees
Upon the slimy sea. *Coleridge, Ancient Mariner.*
If you are poor, we be to you! Society, the brutal
and autorial, conscious you to solitary penitence.
Wither, poor girl, in your career; *rot*, poor lark! &c.
In your club.—*Thackeray, Book of Snobs*, ch. xxiv.

Rot. v. a.

1. Make putrid; bring to corruption.

No wood shows that was cut down alive, but such
as was *rotted* in stock and root while it grew.—*Bacon.*

Frowning Auster seeks the southern sphere,
And *rots*, with endless rain, th' unwelcome year. *Dryden.*

2. Cause rot in sheep.

Bakewell, when his sheep were past service, used
to *rot* them purposely by feeding them with
that they might not pass together in this way
always readily did by overstocking his pastures. It
is said that land on which water flows, but does not
stagnate, will not *rot*, however moist; but this is
contradicted by the experience of Bakewell, who
used merely to flood his lands a few times only to
rot his sheep.—*Brand and Cox, Dictionary of
Science, Literature, and Art.*

Rot. s.

1. Disease peculiar to sheep.

In an unlucky graze, the sheep died of the *rot*,
the swine of the mange, and not a goose or duckling
throve.—*R. Johnson.*

The cattlemust of rot and murrain die.

The wool of Ireland suffers under murrain,
the country being generally full stocked with sheep,
and the soil little subject to other *rots* than of hunger.
—*Sir W. Temple.*

The treatment of *rot* is seldom successful, unless
when it is early commenced, or when the disease is
of a mild nature. A total change of food is the first
indication, and of that to a dry wholesome kind.—*Brand and Cox, Dictionary of Science, Literature, and Art.*

2. Disorganisation: (applied to front-bites).

They interlard their native drinks with choice
Of strongest brandy, yet scarce with these aids
Enabled to prevent the murrain *rot*
Of freezing nose, and quick decaying feet. *J. Phillips, Cyder*, ii. 247.

Rôta. s. [Lat. = wheel.—] Applied as this word
is in its first sense, it is connected with the
notion of a wheel merely from a certain
chamber, the *Rotæ Porphyretica* (or *Porphyry Wheel*), the floor of which had the

pattern of a wheel. 'Camera Romæ ejus
pavimentum ex marmore porphyretico *rotæ*.
figuram efformant: unde camera ipsa
unde *rotæ* dicta est, ut Normannus *Seacurium*,
quod camera, in qua iudicia exer-
cebantur, Seacurii instar, marmoreis ta-
bellis distingueretur.' (Du Cange, in *roce*.)
In the second the notion is that of the
motion of the wheel, i.e. its *rotation*.

1. Court of papal jurisdiction, consisting of
twelve doctors.

Staphileus, dean of the *rota*, was there.—*Bishop
Baron, History of the Reformation*, i. 61.

2. Club of politicians, in the history of this
country, who when the government so often
wavered in 1629, were for contriving an
equal government by *rotation*.

A Parliament which may make old men grieve,
And children that to'er shall be born complain—
I mean such as dy'd before they did live,
Like Harrington's *Rotæ*, or th' engine of Vane.
The Rump roughly but righteously handled,
Loyal Songs, edit. 1731, vol. ii. p. 110.

Then down in your ire,
With this Rump to the fire,
Get Harrington's *Rotæ* to turn it;
If paper be lack'd,
Th' Assessment Act,
You may stick upon't lest ye turn it. *Loyal Songs*, ii. 129.

Sidrophel, as full of tricks
As *rotation* of jointness,
Straight cast about to over-reach
The unwary conqueror with a fob. *Bat's, Hishwak*, ii. 3, 1167.

The sentence of the *Rotæ* upon Mr. Milton's book,
entitled *The Ready and Easy Way to Establish a
Free Commonwealth*, was (Jan. 21) Martii, 1639,
Ordered by the *Rotæ*, that Mr. Harrington be de-
sired to draw up a Narrative of this day's proceed-
ing up on Mr. Milton's book, called the *Ready and
Easy Way*, &c. And to cause the same to be forth-
with printed and published, and a copy thereof to
be sent to Mr. Milton. Trundle Wheeler, Clerk to
the *Rotæ*, London. Printed by Paul Bibly, Printer
to the *Rotæ*, at the Sign of the Windmill in Thrus-
mole Lane.—*Tenth page of pseudonymus Satirical
Composition in Prose*: 1630.

Rotation. s. [Fr.; Lat. *rotatio, -onis*.]

1. Act of whirling round like a wheel; state
of being so whirled round; whirl.

Of this kind is some disposition of bodies to *rotation*
from east to west; as the main float and relict
of the sea, by consent of the universe as part of the
diurnal motion. *Ramus.*

By a kind of circulation or *rotation*, arts have
their successive invention, perfection, and trans-
lation from one people to another.—*Sir J. Hale, Origin
of Mankind*.

The amusements of chariots take fire by the rapid
rotation of the wheels.—*Sir I. Newton, On Opticks*.
In the passions' wild *rotation* lost,
Our spring of action to ourselves is lost. *Pope, Moral Essays*, l. 41.

2. Vicissitude of succession.

This is all the possible *rotation* our speculative
state-holders can in reason promise to himself.—*Beck's, Character*.

So far as observations have hitherto been made, it
appears probable that the excrements given out by
plants of different families possess very different
qualities, and act differently upon other plants. It
had been long known to gardeners that flowers and
fruit-trees will not prosper so well when they have
been planted in a situation where others of the same
kind had previously grown, as if they were planted
in situations where they succeeded to others of a
different kind. It is also a well-established fact in
forestry, that when a wood principally composed of
one species of timber trees has been cleared, the
trees which then spring up spontaneously and sup-
ply the place of the former growth are for the most
part of a different species. And lastly, the agricul-
turalist has established a *rotation* of crops upon ex-
perimental proof that grain of one kind succeeds
better when it follows certain other kinds, than
when it is sown immediately after a crop of the same
plant. *Hunter, Principles of Domestic and
Physiological Botany*, pt. ii. ch. iii. § 218.

Rotator. s. [Lat.] That which moves in,
that which gives a circular motion.

This articulation is strengthened by strong
muscles; on the inside by the triceps and the four
little *rotators*.—*Winneand, Surgery*.

Rotatoria, and Rotatorios. s. In Zoology.
Name of the class constituted by certain
animalcula, originally classed with the In-
fusoria, but now placed in the neighbour-
hood of the Mollusca; wheel-animalcules;
Rotifera.

The wheel-animalcules are capable of contraction
in a remarkable manner, many of them assuming
thereby an oval form. This faculty of contraction
gave occasion to the name *Rotatiles*, by which
Dujardin wishes to distinguish this class of animals,
but which probably will not supersede that of *Ro-
tatoria*. In some the interment is hard and rigid
as to form a shell or a shell; Brachionus, Anura,
&c. In most there is a caudiform appendage on the
abdominal surface; Ehrenberg unites the *Processus*
pediformis or pseudopodium, which can be drawn
in and out annularly like a telescope, and ends in
a suctorial disc or in a forepaw; by it the *rotatoria*
fix the posterior extremity of the body, whenever,
being at rest, they set the wheel-organ in motion.—
Transact., by Dr. R. Clark, of Van der Hoeven,
Handbook of Zoology.

Rotatory. adj. Whirling; running round
with celerity.

The ball and socket joint allows a *rotatory* or
sweeping motion.—*Foley, Natural Theology*, ch. ix.

Rotche. s. [?] British nautical bird akin
to the mink and penguins of the genus
Mergulus (melaneus).

The little mink, or common *rotche*, as it is also
called . . . is only a winter visitor to the British
Islands, and is more frequently met with among
those of Orkney and Shetland, than further south.—
Farrell, History of British Birds.

Roto. s. [? Lat. *rota* = wheel; ? Lat. *crutta*,
from the Keltic = crowd, fiddle.]

1. Musical instrument in which the vibration
of the strings was caused by the turning of
a wheel, as in the hurdy-gurdy.

There did he find, in her delicious tower,
The faire Panna playing on a *roto*. *Spenser, Faerie Queene*.

A few of the instruments of which the musical
hoards he is the master, and which are not explained
in the translation of the verses, require some ex-
planation. The *muso* is the mangle or tide of a harp,
without the bellows. *Corinthus* was the name of
a horn or Cornish pipe, blown like our bagpipe,
Gahay shawn, in old English, is a clarinet of low
pitch; and clannaman is French for a large language
made of box, with a great board or drone, as
musette is for one of a small size. Of what kind
of instrument was the clannaman, cythone, symphonie,
is not very well known. Some of the quotations
given by Du Cange describe it as a wind instrument,
and others as a species of drum, played with hoes,
like a sieve. I have not the least doubt but that the
instrument called a *roto*, so frequently mentioned
by our Chaucer, as well as by the old French poets,
was the same as the modern *rotte*, and had its first
name from *rota*, the wheel with which its tones are
produced. The name and armonia were instru-
ments concerning which I can procure no informa-

Rouge. *s.* [Fr.] Cosmetic so called.

The only cosmetic which can be applied without injury to brighten a lady's complexion, is that prepared by the following process from sallow (Carthamus tinctorius). The flowers, after being washed with pure water till it comes off colourless, are dried, pulverized, and digested with a weak solution of crystals of soda, which assumes thereby a yellow colour; into this liquor a quantity of finely carbed white cotton wool is plunged, and then so much lemon juice or pure vinegar is added as to supersaturate the soda. The colouring matter is disengaged, and falls down in an impalpable powder upon the cotton filaments. The cotton, after being washed in cold water to remove some yellow colouring particles, is to be treated with a fresh solution of carbonate of soda, which takes up the red colouring matter in a state of purity. Before precipitating this pigment a second time by the acid of lemon, some soft powdered tale should be laid in the bottom of the vessel, for the purpose of absorbing the due *rouge* in proportion as it is separated from the carbonate of soda, which now holds it dissolved. The

coloured mixture must be finally triturated with a few drops of olive oil, in order to make it smooth and mellow.—*See, Dictionary of Arts, Manufactures, and Mines.*

have.—*Rees, Cyclopædia.*

Rubble [is] a quarryman's term for the inferior varieties of stone surmounting each valuable bed of limestone extracted for building purposes. It is often the result of weathering or natural disintegration by air and water, sun and frost. The fragmentary masses often found between a rock and the overlying soil derived from the rock, are also sometimes called by this name. It is an equivalent of the term *Brash*, used in some parts of England. Thus cornbrash is a brash or rubble of rotten limestone making a good corn land. Almost all quarries of limestone abound with this kind of substance. The term is also applied to any stone broken from the quarry in rough irregular masses, and not subjected to any further dressing; stone reduced to a rectangular form being called ashlar.—*Andel, in Brink and Coar, Dictionary of Science, Literature, and Art.*

With regard to the word, *birdick* for *ruddick* or *ruddock* I may mention that it was by being aware of the rule touching the transposed *r*, that I was enabled to recognise it. I knew that *birdick* (literally 'little red one') was a common name with the older poets for the red-breast, and being anxious to know whether it was used in this county (Somersetshire), went to a man working in a field, and asked him whether they ever called the robin the *birdick*. Rudimentary, s. Initial.
It might be expected that if the plan of structure
in a particular tribe involves the non-development
of some organ which is possessed by neighbouring
groups, its conformity to the archetype or general
model should be manifested in the presence of that
organ in a *rudimentary* and undeveloped condition;
and this, as a general rule, we find to be the case.
Thus, we find some rudiment of the lung in most
fish, even where it is not sufficiently developed to
serve as an 'air-chamber' in regulating the specific
gravity of the body. In the abdominal muscles of
Mammals, again, we find the abdominal sternum
and ribs of Saurian reptiles indicated by white
fibrous bands; and in those Mammals which do not
possess a clavicle, that bone is usually represented
by a ligament, just as the styloid ligament in
Man represents a portion of the hyoid arch which
is elsewhere completely ossified. Such *rudimentary*
structures, however, often display themselves only
at an early period of development, and are subse-
quently lost sight of.—*Dr. Carpenter, Principles
of Physiology, General and Comparative, § 338:
1851.*

1. Part of the name of an old game at cards.
What ... was anciently connected with a game
called 'English *Ruff* and Honours,' or 'Sham';
only in which the four deniers were left out, and the
game nine. In the former four cards at the end of
the deal were turned up, and he that had the most
of trumps *ruffed*, i.e. exchanged bad cards in his hand
for those four. 'Ruffing?' Can ye? Honours are
split, &c. are terms used in *Ruff* and Honours; and
modern whist is the evident issue of these two
games. Those cards put out were called *swabbers*.

—*Id., Taming of the Shrew, iv. 3.*

Some very few of the best and most curious
of that time, observing the neatness and decency

of the Dutch for whiteness and fine wearing of linen, made them cambricke *ruffs*, and sent them to Mistris Dingham to starch, and after awhile they made them *ruffs* of lawn, which was at that time a stuff most strange, and wonderful, and thereupon rose a general scuffle or by-word, that shortly they would make *ruffs* of a spider's web; and then they began to send their daughters and nearest kinswomen to Mistris Dingham to learne how to starch; her usual price was at that time, foure or five pound, to teach them how to starch, and twenty shillings how to seeth starch. — *Shore*.

Sooner may a gulling weather sly,

Our giddy-headed nuckle youth will wear. — *Donne*.

The ladies freed the neck from those yokes, those linen *ruffs* in which the simplicity of their grandmothers had enclosed it. — *Addison, Guardian*.

There is a print by Vertue of Queen Elizabeth going in a procession to Lord Hunsdon, who no doubt was the leader likewise of the fashion; but it is impossible, with our ideas of grace and comfort, not to commiserate this unfortunate lady, whose standing-up wire *ruff*, rising above her head; whose stays, or bodice, so long twisted as to reach to her knees, and the circumference of her large hoop farthingale, which seems to enclose her in a capacious tub, mark her out as one of the most pitiable martyrs of ancient modes. — *J. The *ruff*, a fresh-water fish, closely allied to the perch, but with a single dorsal fin, appears to have been unknown to the ancients, and earlier notices the credit of its first discovery to an Englishman, whose name was Caius. . . . the learned Dr. Caius, well known for his various zoological writings. . . . He found it in the river Være, near Norwich, and called it *asperele*, a translation of our name *ruff* (rough), which is well applied to it on account of the harsh feel of its denticulated scales. Caius sent the first figure of this fish to Gesner, who published it. — *Farrall, History of British Fishes*.

The *ruff* differs in so many points from the species included in the genera *Totanus*, *Scopax*, and *Tringa*, that the generic division and term *Machetes*, in reference to its pugnacious habits proposed for it by Baron Cuvier. . . . has been admitted by many systematic writers. . . . The name, marked distinction of this species, which up to the present time is the only one of the genus known, are the periodical assumption by the males of the *ruff* about the neck, which has led to the English name; that scarcely any two of these males can be found of the same colour, which is very unusual in wild birds, while the females are uniform in colour, or nearly so; that the males are polygamous, and about one-third larger than the females. . . . 14 cwt. each, requires for the manufacture of its
rum two copper stills, one of a thousand gallons for
the wash, and one of six hundred gallons for the low
wines, with corresponding worm refrigerators. It
also requires two cisterns, one of three thousand gal-
lons for the raw or spent wash of former distillations,

bers of the class *Ruminantia*, i. e. the ani-
mals akin to the oxen, sheep, deer, &c.;

and as an adjective: *guminants*, *guminant*
animal).

The description given of the muscular part of the
gullet is very exact in *ruminants*, but not in men.
—*Jerham, Physico-Theology*.

Ruminants [is] the name given by Cuvier to the
Peccora of Linnaeus, an order of ungulate mammals,
including those which have a complicated stomach

of four cavities, so disposed as to allow of rumina-
tion, and a lower food.—*Quen, in Brande and Cor,
Dictionary of Science, Literature, and Art*.

Although in the mammalia the reducing apparatus
is limited to the mouth, yet the stomach frequently
presents a complex arrangement, of which the phar-
ynx seems to be to favour the mechanical reduction
of the food, and its impregnation with fluid, before
it is subjected to the true digestive action. The
most remarkable example of this kind is presented
in the group of *Ruminantia*, in which the stomach is
subdivided into four distinct cavities; the first two
of these, however, being rather dilatations of the
oesophagus, than parts of the stomach itself. The
food, on its passage down the oesophagus, in a rude
unmasticated state, enters the larger cavity termed
the *indivisa* or 'paunch,' which, like the crop of
birds, serves as a temporary receptacle for it, and
modifies it with the fluid secreted from its walls;
the liquid swallowed, on the other hand, seems to
be specially directed into the second cavity, which
is termed the reticulum or 'honey-suckle-stomach,'
from the reticulated appearance of its interior, oc-
casioned by the irregular folding of its internal
membrane. . . . When finally swallowed, the food is
directed . . . to the third stomach, the *caecum*, com-
monly termed the 'maniplex' from the peculiar
manner in which its lining membrane is disposed;
this presents a number of folds, lying nearly close
to each other like the leaves of a book, but all di-
rected by their free edges to the centre of the tube,
a narrow fold intervening between each pair of
broad ones. The food, now reduced to a pulpy state,
has therefore to pass over a large surface, before it
can reach the outlet of that cavity, which leads to
the abomasum or fourth stomach, commonly called
the reed. This is the seat of the true process of di-
gestion, the gastric fluid being secreted from it
alone; and it is from this part of the calf's stomach
that the 'rennet' is taken, which derives its extra-
ordinary power of coagulating milk from the organic
acid it contains.—*Dr. Carpenter, Principles of Phys-
iology, General and Comparative*, § 4651, 1851.

Ráminate, or Ráminated. adj. In Equine.

See extract.

The uniformity of the . . . *clostris* is destroyed
in some ways by a peculiar laminated condition of
the outer portion, the laminae being filled up and
enclosed in an inseparable layer of different-colored
tissue, giving a marbled appearance; this, which is
seen in the nature, is called a *ruminated* *clostris* or
albumen.—*Henry, Elementary Course of Bot-
any, Structural, Physiological, and Systematic*,
§ 294.

chew the cud, extremely open.—*Arbuthnot, On the
Nature and Choice of Aliments*.

On the grassy bank

Some *ruminating* lie.

Thomson, Seasons, Summer.

'The stability of the laws of Nature,' . . . is our
constant assumption in inquiries relating to natural
philosophy, appears in many different shapes, and
in some of them does not possess the same complete
certainty as in others; e. g. when, from having
always observed a certain sheep *ruminating*, we
infer that this individual sheep will continue to
ruminate, we assume that 'the property which has
hitherto belonged to this sheep will remain un-
changed;' when we infer the same property of all
sheep, we assume that 'the property which belongs
to this individual belongs to the whole species;' If
in comparing sheep with some other kinds of horned
animals, and finding that all agree in *ruminating*,
we infer that 'all horned animals *ruminate*,' we
assume that 'the whole of a genus or class are likely
to agree in any point wherein many species of that
genus agree.'—*Archbishop Whately, Systems of Logic*,
b. iv. ch. ii. § 3.

2. Muse; think again and again.

To *ruminate* upon her discontent. *Fairfax*.

the subject; and perhaps in two nights and days
raises those several ideas which are necessary.—

glasses, and kept his eyes shut, that he might *ruminate*
the better.—*Dickens, Martin Chuzzlewit*, ch. lii.

Ráminate. v. a.

And wishes all her wishes o'er again;
Now she despairs, and now resolves to try;
Would not, and would again, she knows not why.
Dryden.

Rumination. s.

1. Property or act of chewing the cud.

Rumination is given to animals, to enable them at once to lay up a great store of food, and afterwards to chew it.—*Arbuthnot.*

The stomach of the ruminants is specially organised for *rumination*, consisting of four distinct cavities, all of which communicate with a muscular canal at the termination of the oesophagus. Hard, solid, or scarcely masticated food, passes from the beginning of the muscular canal into the first cavity of the stomach, called the rumen or paunch. Water is received into the second cavity, called the Reticulum, and almost exclusively occupies the honey-combed cells of that cavity; it is gradually mixed with the coarsely divided food which is undergoing mastication in the rumen. When this is sufficiently advanced, a portion of the mass is received into a muscular canal at the termination of the oesophagus; it is there moulded into a ball, and propelled by a rapid and inverted action of the muscles of the gullet into the mouth, where it is more perfectly masticated, mixed with fluid, and again swallowed. It now passes directly into the third stomach, called the pastrum, from the broad leaf-like plates of membrane with which it is occupied. Here the superfluous fluid, which otherwise might have too much diluted the gastric juice, is absorbed, and the subdivided and passed gradually into the fourth or true masticating stomach, called the abomasum. In the rumen tribe, water-cells are developed at the sides of the rumen, in addition to those of the reticulum, and the pastrum is not separated by any constriction from the abomasum.—*Quoy, in Brand and Gar, Dictionary of Science, Literature, and Art.*

2. Meditation; reflection.

It is a melancholy of mine own, extracted from many objects, in which my often *rumination* wraps me in a most humorous sadness.—*Shakespeare, As you like it, iv. 1.*

Thomson.
Alexander, to whom such spectacles were new, did not perhaps sufficiently reflect, that to throw away life—whether in frivolous amusements, or useless studies, or incident *rumination*, requires much less vigour of mind and energy of character than to spend it in enterprises even less arduous and noble than his own.—*Bishop Thirlwall, History of Greece, ch. lvi.*

undue haste.
The edifice of Constantine, in all likelihood
hastily run up, and, if splendid, wanting in strength
and solidity, gave place to more stately and endur-
ing churches.—*Milman, History of Latin Chris-
tiansity, b. xiv. ch. vii.*

This is one of the words which serve
for use when other words are wanted, and
has therefore obtained a great multiplicity
of relations and intentions; but it may be
observed always to retain much of its pri-
native idea, and to imply progression, and,
for the most part, progressive violence.

Run. s.

1. Act of running.
The ass sets up a hideous bray, and fetches a run
at them open mouth.—*Sir R. L'Estrange.*
Mr. Pickwick panted, considered, pulled off his
gloves and put them in his hat: took two or three
short runs, hauled himself as often, and at last

the slide, with his feet about a yard and a quarter
apart, amidst the gratified shouts of all the specta-
tors.—*Dickens, Pickwick Papers, ch. xxii.*

long run, sir, if I find she likes it.—*Dickens, Martin
Chuzzlewit, ch. xxx.*

It is impossible for detached papers to have a
general run or long continuance, if not diversified
with humour.—*Addison.*

8. Modish chimour; popular censure.
You cannot but have observed, what a violent run
there is among too many weak people against uni-
versity education.—*Swift.*

their side, yet were wit and railery could not hold it
out long against a work of so much learning.—*War-
burton, Notes on Pope.*

9. In Commerce. Unforeseen pressure for
payment of notes or bills.
It obliges all of them (the banking companies) to

unlucky runs which the rivalry of so many com-
petitors is always ready to bring upon them.—*A.
Smith, Wealth of Nations, p. 231. (Ord MS.)*

the advancement of his estate than truth?—*Arch-
bishop Tillotson.*

corruption.
The wretch, compell'd, a runagate became,
And learn'd what ill a miser state doth breed.
Sir P. Sidney.
[God] bringeth the prisoners out of captivity; but
leteth the runagates continue in servitude.—*Book
of Common Prayer, Psalms, lxxviii. 6.*
I dedicate myself to your sweet pleasure,
More noble than that runagate to your bed.

As Cain, after he had slain Abel, had no certain
abiding, so the Jews, after they had crucified the
Son of God, became runagates.—*Sir W. Raleigh,
History of the World.*

thee?—*Bunyan, Pilgrim's Progress.*

wards the base, as in the dandelion.—*Hensley, Ele-
mentary Course of Botany, § 93.*

summer, to see whether it will sweeten.—*Bacon,
Natural and Experimental History.*

Rune. *s.* [Danish; Swedish, *runa*; Icelandic, *runa*.] Letter of the old Teutonic and Scandinavian alphabets, as found chiefly in inscriptions and archaic forms of writing. This is all that can safely be said about runes in the way of undoubted history; the opinions as to their antiquity being divided, and the antiquity (by some of the archaeologists at least) greatly overrated. A magical, or mysterious, import has been attributed to runes.

The runes were for long periods of time in use upon materials more lasting than any others employed to the same purpose.—*Sir W. Temple*.

There are many inscriptions now remaining, by which it will appear that the Danish runes were much studied among our Saxon ancestors.—*T. Warton, History of English Poetry*, vol. i. diss. i.

It is curious to find (the profit Chino, as in Chino-belium) recurring in Wales and Cornwall after the lapse of several centuries; but on a stone of the Christian period, with runes inscribed along its edge, found at Trallong, Brecknockshire, is the following inscription: Cunoegen Filius Cunoegen filii Jacet.—*Boissac, China of the Ancient Britons*, p. 254.

Runic. *adj.* Relating to, constituted by, consisting in, runes.

Odin was the first inventor, at least the first engraver, of the runic letters or characters.—*Sir W. Temple*.

There huge Colonnas rose with trophies crown'd, And runic characters were grav'd around.

Thrice he traced the runic rhyme;

Bubbling runnels join'd the sound.

Collins, Ode on the Passions.

4. Shooting sprig.

In every root there will be one runner, which hath little buds on it, which may be cut off.—*Mortimer, Husbandry*.

The leafy shoots of perennial plants . . . may be separated artificially, and used for propagating the plant . . . and certain plants are naturally multiplied in the same way, by buds or branches, which have received special names. . . . The separating tuft formed in the autumn is called an offset. The strawberry plant in like manner, produces in the axils of its leaves, buds, which, in the summer season, extend several of their internodes, and form long diffused branches, the buds of which give rise to rootlets of leaves, and strike root to form independent plants. Such plants are called runners.—*Henfrey, Elementary Course of Botany*, § 54.

5. One of the stones of a mill.

The mill goes much heavier by the stone they call the runner being so large.—*Mortimer, Husbandry*.

Rennet. *s.* [?] Liquor made by steeping the stomach of a calf in hot water, and used to coagulate milk for curds and cheese: (sometimes written *rennet*).

The milk of the doe hath the quality of rennet to coagulate cheese.—*Jacobs, Natural and Experimental History*.

It coagulates the blood, as rennet turns milk.—*Dr. W. More*.

The milk in the stomach of calves, coagulated by the rennet, is rendered fluid by the gall in the duodenum.—*Arbuthnot*.

Running. *part. adj.*

3. With account.

The good man's enemies would have divided upon this question into two parties. One would have asserted without scruple that if Mr. Pecksniff's conscience were his link, and he kept a running account there, he must have overdrawn it beyond all mortal means of excommunication. The other would have contended that it was a mere fictitious form; a perfectly blank book; or one in which entries were only made with a peculiar kind of invisible ink to become legible at some indefinite time; and that he never troubled it at all.—*Dickens, Martin Chuzzlewit*, ch. 22.

Running. *verbal abs.*

1. Act of moving on with celerity.

A running that could not be seen of skipping beasts.—*Winston of Solomon*, xvii. 10.

As soon as they are well away, they make the running with pocket Hercules.—*B. Disraeli, Sybil*, h. i. ch. iii.

In running, as in walking, it may be considered as a fundamental law that the same motions of the body recur after each double step; and that both legs exercise equal and alternate actions in the movements. In running the object is to acquire a greater velocity in progression than can be attained in walking. In order to accomplish this, instead of the body being supported on each leg alternately, the action is divided into two periods, during one of which the body is supported on one leg, and during the other it is not supported at all. . . . When the body is projected upwards so as to swing freely in the air, the hinder leg must be raised from the ground before the advanced swinging leg has reached the vertical position; hence, in running, the duration of the step is less than the half-duration of the oscillation of the leg, because, when the advanced leg has reached the vertical position and is again placed on the ground, the hinder leg has already begun to describe a portion of its arc of oscillation; by these means the duration of the step is diminished, whilst the length is increased.—*J. Bishop, in Todd's Cyclopaedia of Anatomy and Physiology*, art. Motion.

2. Discharge of a wound or sore.

Rant. *s.* [?] *rind*.—see Rother, and Rinderpest.]

1. Any animal small, or short, below the natural growth of the kind.

This overgrown rant has struck off his heels, lowered his foretop, and contrived his figure.—*Addison*.

When the parties, that divide the commonwealth, come to a rupture, it seems every man's duty to choose a side.—*Swift*.

3. Hernia; preternatural eruption of the gut.

The rupture of the groin or scrotum is the most common species of hernia.—*Sharp, Surgery*.

Rupture. *v. a.* Breuk; burst; suffer disruption.

The vessels of the brain and membranes, if ruptured, absorb the extravasated blood.—*Sharp, Surgery*.

Rupture-wort. *s.* Plant of the genus *Herminaria*.

The smooth rupture-wort grows on gravelly or sandy ground; the root tapering, somewhat woody, and perennial, stems prostrate. Leaves obovate or elliptical, stalked, and with the calyx quite smooth. Flowers small, green, in dense clusters. The herb is rather saltish, astringent, and diuretic, the juice is said to remove specks from the eyes. The lady rupture-wort is a more rare species, and has the leaves and calyx hairy, and the stem is always rough.—*C. W. Johnson, Farmer's Cyclopaedia*, p. 1054.

Rural. *adj.* [Fr.] Country; existing in the country, not in cities; suiting the country; resembling the country.

Is supper ready, the house (triumph) *rushes* are w'd, colours swept.—*Id., Twelfth Night*, iv. 1.

Your farm . . . requires your pains;
Though *rushes* overspread the neighbouring plains.

Dryden, Translation of Virgil, Eclogues, i. 68.

A rush hath a flower composed of many leaves, which are placed orbicularly, and expand in form of a rose; from the centre of which rises the point, which afterwards becomes a fruit or husk, which is generally three-cornered, opening into three parts, and full of roundish seeds; they are planted with great care on the banks of the sea in Holland, in order to prevent the water from washing away the earth; for the roots of these *rushes* fasten themselves very deep in the stratum, and run themselves near the surface, so as to hold the earth closely together.—*Miller, Gardener's Dictionary*.

Rushes always intimate a deep rich soil, and thrive best in land which is too cold and wet for other plants. The growth of these plants may be easily prevented by under or surface draining, which will prevent the stagnation of water on the soil; and by the application of saline or calcareous top-dressings, such as sand, lime, and marl, and renderings. All the species of *rush* do best cultivated in a moist situation, some of them entirely in water, and others in a peat soil; they may be increased by seeds, or dividing the root. In Japan they cultivate the soft *rush* for making floor-mats.—*C. W. Johnson, Farmer's Cyclopaedia*.

The leaves of *rushes* are largely used for matting, chair-bottoms, &c., and the parenchyma or pith of the cylindrical leaves and stems was much used until recently for making the wicks of *rush-lights*; this substance has a beautiful microscopic structure, being formed of regular stellate cells.—*Henfrey, Elementary Course of Botany*.

The polishing *rush* or Dutch *rush* are commercial names of *Equisetum hyemale*, which in consequence of the large quantity of silica contained in its tissues is imported, principally from Holland, as a material for polishing wood, ivory, and brass. The greater number of the particles, according to Brewster, form simple straight lines, but the rest are grouped into oval forms connected together like the pearls of a necklace by a chain of particles, these rows of oval combinations being arranged in pairs. The straw and chaff of wheat, &c., which when burnt is also good for polishing, presents analogous phenomena, but the particles are arranged in a different manner.—*Brande and Cox, Dictionary of Science, Literature, and Art*.

2. Anything proverbially worthless.

I value it not a *rush*.—*King Charles I., Original Narrative of his Trial*, no. ii. p. 6.

John Bull's friendship is not worth a *rash*.—*Archibald, History of John Bull*.
Branch and *rash* seem, at first, to be put for branch and root, in two passages of Isaiah, in our public version. It is, however, a literal translation from the Hebrew, probably meaning strong and weak.

The Lord will cut off from Israel head and tail, *branch and rash*, in one day. — *Isaiah*, ix. 14.
Neither shall there be any work for Egypt, who the head or tail, *branch and rash*, may do. — *Id.*, xix. 15.
It means, clearly, great and small, and is so rendered in the Septuagint, at the former place; in the *Id.*, *ἀρχὴ καὶ ῥίζα*. Antithesis, and all commentators say, that by branch the Hebrew ant. 'the strong,' and by *rash* 'the weak per *Sura*, *Glossary*.

Rash. *v. n.* [A.S. *hreošan*; whence, also, Rouse.] Move with violence; go on with tumultuous rapidity.

Then took Gargias five thousand footmen, and a thousand of the best horsemen, and removed out of the camp by night, to the end he might *rash* in upon the camp of the Jews. — *Maccabees*, ix. 1.

Armed *rash* to battle in the clouds.

Why will thou *rash* to certain death and rage, In rash attempts beyond thy tender age, Betray'd by pains love?

Now sunk the sun from his meridian height, And o'er the shaded billows *rashed* the night.

Rash. *v. a.* Push forward with violence.
Consideration, in a most special manner, we owe to our souls; for without it, we shall, as rash-minded people use to do, *rash* them into infinite perils. — *Whole Duty of Man*, Sunday vi. § 21.

Sweep'd him off into his grave.
Crashaw.
Crash Auster thither he'd him,
And with the *rash* of one rude blast,
Showered not spitefully to east.
All his leaves so fresh, so sweet.

Like the *rash* of showers
Of hail in spring, jattering along the ground,
Their many footstep fell.

Shelley, Recollections of Islam, v. 20.

Rash-bearing. *s.* See extract.
It appears that in ancient times the parishioners brought rushes at the Feast of Dedication, wherewith to strew the church, and from that circumstance the festivity itself has obtained the name of *rash-bearing*, which occurs for a country was so in a glossary to the *Lantern* dialect. . . . The *rash-bearing*, according to Lanes, is in this manner: They cut hard rushes from the marsh, which they make up into long bundles, and then dress them in fine linen, silk, ribbons, flowers, &c. Afterwards, the young women in the village, who perform the ceremony that year, take up the burdens and begin the procession (precedence being always given to the churchwarden's burden), which is attended with music, drums, &c. Setting down their burdens in the church, they strip them of their ornaments, leaving the heads or crowns of them decked with flowers, cut papers, &c. Then the company return and cheerfully partake of a cold collation, and spend the remaining part of the day and night in dancing, and a maypole, adorned with flowers. — *British Popular Antiquities*, by Sir H. Ellis, vol. ii. p. 13: 1849.

Rash-candle. *s.* [Two words.] Small blinking taper, made by stripping a rush, except one small stripe of the bark, which holds the pith together, and dipping it in tallow.

Be it moon or sun, or what you please;
And if you please to call it a *rash-candle*,
Henceforth it shall be so for me.

Shakespeare, Taming of the Shrew, iv. 3.

With black usurping mists, we'll grow a taper,
Though a *rash-candle* from the wicker-hole
Of some clay habitation, visit us.

Milton, Comus, 330.

Rash-ring. *s.* [Two words.] See extract.
A custom extremely hurtful to the interests of morality appears anciently to have prevailed both in England and other countries, of marrying with a *rash ring*; chiefly practised, however, by designing men, for the purpose of debauching their mistresses, who sometimes were so intimated as to believe that this mock ceremony was a real marriage. — *British Popular Antiquities*, by Sir H. Ellis, vol. ii. p. 107: 1849.

Work it well, and divide into small loaves, &c. When baked, and cold, slice them the thickness of *rask*, and put them into the oven to brown a little. — *Mrs. Gorton's New Domestic Cookery*.

When country's *russ* breed content.

Hyperion, Shepherd's Song.
The Dorset dialect has a sweetness in its elocution, like a fair shepherdess in her country *russ*. — *Id.*

2. Name given to several sorts of pears or apples from their colour.

The *russ* pearman is a very pleasant fruit, continuing long on the tree, and in the conservatory partakes both of the *russ* and pearman in colour and taste; the one side being generally *russ*, and the other streaked like a pearman. — *Mortimer, Husbandry*.

Russeting. *s.* Russet.

The apple-orange; then, the savoury *russ*.

Dragon, Polyph.

Russety. *adj.* Of a russet colour.

The lawyers are met at the Anchor and Crown, And Yamen's clerk is a *russ* brown.

Rust. *s.* [A.S.]

1. Red desquamation of old iron.

This rust been at the length to rather *russ*. — *Hooker, Ecclesiastical Polity*.

Rust-eaten pikes and swords in time to come, When cracked plows dig up earth's fertile womb, The hus and hus shall of discovery.

Aug. Translation of Virgil.

But Polix came in shape of *russ*, And twist the spring and hammer thrust Her form a shield, which made the oak Stand still, as 'twere transfused to stock.

Bulwer, Huntress, l. 2, 781.

Dragon, Translation of the Koran, vi. 1113.

3. In Chemistry. Oxide of metals; with a more extended application to several other kinds of oxidation.

4. Mildew.

Of parasitical fungi the most important are those which are called dry rot. Next to these come the blight in corn. . . . The smut and ergot, if they are really anything more than the diseased and disorganized tissue of the plants affected; the *russ*, which is owing to the ravages of *Uromyces* and *Uromyces*; and finally, in this class is to be included what we call mildew, into simple articulated *Uromyces* and *Uromyces*. — *Laing, Vegetable Kingdom*.

The *russ* attack the leaves and hopewings organs of living plants. . . . they constitute some of the most noxious vegetable pests of agriculture and horticulture. *Uromyces* granitum forms the mildew of wheat; the *Uromyces* form of the genera of this same tribe, known as species of *Uromyces*, constituting the blights, *russ*, &c. of corn and other cultivated plants; *Uromyces* *Uromyces* the white *russ* of caldages. — *Laing, Vegetable Kingdom*.

Rust does not appear to be injurious to corn, so long as it is confined to the leaves and awns; it is a formidable adversary when it attacks the chaff or seed, and the more so because it is impossible to suggest any remedy. Every pedagogue is shut out before the grain is reaped; therefore sowing in *russ*, and the application of any dressing to the soil is equally inefficient. — *Moore, in British and Eur. Dictionary of Science, Literature, and Art*.

Rust. *v. n.*

1. Gather rust; have the surface: tarnished or corroded.

Her fellow lens.

Rye. s. [A.S. *ryge*.]1. Corn-grass of the genus *Secale*.Between the acres of the *rye*,

These pretty country folks would lye.

*Shakespeare, As you like it, v. 3, song.**Rye* is more acrid, laxative, and less nourishing than wheat.—*Arbutnot, On the Nature and Choice of Aliments.**Rye*, according to some, is a native of Crete; but it is very doubtful whether any country can be so well ascertained to be its native soil. . . . It is more common than wheat on most parts of the continent; being a more certain crop, and one which requires less culture, and manure. . . . Many consider it the most impoverishing of all crops.—*Loudon, Encyclopædia of Agriculture*, § 5039.The meal of *rye* is considered second only to wheat; it is often used alone, or mixed with a proportion of wheat flour to make bread and gingerbread. In those unacquainted to its use, it is apt to cause an uneasy state of the stomach and diarrhoea. *Rye* is liable to a disease called *ergot*, which depends on a fungus, which attacks and alters the character of the grain. It becomes long, of a deep violet hue externally, and pinkish white within.The odour of the ergotted grain is fishy and fetid, the taste slightly acrid. Ergotted or spurred *rye* is poisonous, when it is baked into bread. It causes febrile symptoms, great debility, often paralysis, tremors, abscesses, gangrene, and death. Some of the epidemics which have occasionally nearly depopulated the north of Europe, have been traced to the use of the spurred *rye*.—*C. W. Johnson, Farmers' Cyclopædia*.The grains which extend farthest to the north in Europe are barley and oats. . . . *Rye* is the next which becomes associated with these. This is the prevailing grain in a great part of the northern temperate zone, namely, in the south of Sweden and Norway, Denmark, and all the lands bordering on the Baltic, the north of Germany, and part of Siberia. . . . In the zone where *rye* prevails, wheat is generally to be found; barley being here chiefly cultivated for the manufacture of beer, and oats supplying food for the horses. To these three follows a zone in Europe and Western Asia, where *rye* disappears and wheat almost exclusively furnishes bread.—*Loudon, Vegetable Kingdom*.On either side the river in Long fields of barley and of *rye*, That clothe the world and meet the sky,And thro' the field the road runs by
To many-towered Camelot.*Tennyson, Lady of Shalott.*

The varieties of this species are very numerous, such as the slender *rye-grass*, clumped or broad-spiked *rye-grass*, lacy *rye-grass*, Russell's grass, Whitworth's grass, Stickney's grass, pinnated *rye-grass*, double-flowered *rye-grass*, viviparous *rye-grass*. All the varieties have a strong tendency to vary their form when sown on different soils.—*C. W. Johnson, Farmers' Cyclopædia*.

SABA

SABAISM. s. Sabianism; worship of the heavenly bodies.We find one rite or ceremony of the *Sabians* or *Planetaries* worship, Job xxi. 25, 27. 'If I behold the sun when it shined, &c.' This holy man (wom, as it is supposed, lived among these *Sabii* about Joseph's time (as Jerome) when this their idolatry was come to some maturity) speaks openly of the planetary worship then so common. And the first part of this *Sabianism* he so industriously smoothes from himself is beholding the sun when it shined. Not the simple beholding of . . . but beholding it with such an eye as steals away the heart. . . . Job here shows that the original seat of *Sabianism* was the heart. . . . There were other parts of *Sabianism*, or star worship, namely images and fires. *Gale, Court of the Gentiles*, pt. ii. b. l. ch. iv. § 6: 1671.**Sabadilla.** s. [Spanish.] Poisonous plant so called; poison therefrom.White Hellebore . . . *Anemone officinalis* (*Sabadilla* or *Cereoida*, of Mexico), all share the acrid narcotic qualities, poisonous or medicinal, according to the dose.—*Henfrey, Elementary Course of Botany*, § 578.**Sabbath.** s. [Hebrew.] Army; host.Holy Lord God of *sabbath*; that is, Lord of hosts.—*Book of Common Prayer*.**Sabbatarian.** s. *

We have myriads of examples in this kind, amongst these rigid *Sabbatarians*.—*Barton, Anatomy of Melancholy*, p. 681.

2. One who observes the seventh day of the week in opposition to the first.

Sabbatarians, or Seventh-day Baptists, a sect of anabaptists; thus called, because they observed the Jewish or Saturday sabbath, from a persuasion that it was never abrogated in the New Testament by the institution of any other.—*Kece, Cyclopædia*.**Sabbatarian.** adj. Connected with, belonging to sabbatarianism.Puritans . . . were wont to pass their strange determinations, *sabbatarian* parades, and apocalyptic frolics, under the name and covert of the true professors of Christian doctrine.—*Bishop Mordaunt, Appeal to Caesar*, dedication.**Sabbatarianism.** s. Tenets of sabbatarians. Laws against profanation; I do not mean tending to Judaism or sabbatarianism.—*Bishop Ward, Sermon on the thirtieth of January, 1673*, p. 34.**Sabbath.** s. [Hebrew; Gr. *σάββατον*.]

1. Day appointed by God among the Jews, and from them established among Christians for public worship; the seventh day set apart from works of labour to be employed in piety.

(purpose)

And by our holy *sabbath* have I sworn,
To have the day and fulfil of my bond.
Shakespeare, Merchant of Venice, iv. 1.

SABB

Glad we return'd up to the coasts of light,
Ere *sabbath* evening.*Milton, Paradise Lost*, viii. 245.Her every day was *sabbath*: only free
From hours of prayer, for hours of clarity,
Such as the Jews from servile toil release.
Where works of mercy were a part of rest:
Such as blood angels exercise above;
Vary'd with sacred hymns and acts of love;
Such *sabbaths* as that one she now enjoys
Even that perpetual one, which she employs
(For such vicissitudes in heaven there are),
In praise alternate, and alternate prayer.*Dryden, Kleonora*, 116.There was a double reason rendered by God why the Jews should keep that *sabbath* which they did; one special, as to a seventh day, to show they worshipped that God who was the Creator of the world; the other individual, as to that seventh day, to signify their deliverance from the Egyptian bondage, from which that seventh day was dated. Being then, upon the resurrection of our Saviour, a greater deliverance and far more glorious redemption was wrought than that of Egypt, and therefore a greater observance was due unto it than to that; the individual determination of that day did pass upon a stronger reason to another day, always to be repeated by a seventh return upon the reference to the Creation. As there was a change in the year at the coming out of Egypt, by the command of God; 'this month (the month of Abib) shall be unto you the beginning of months; it shall be the first month of the year to you.' &c. at this time of a more eminent deliverance, a change was wrought in the hebdomadal or weekly account; and the first day is made the seventh, or the seventh after that first is sanctified. And thus the observation of that day, which the Jews did strictly, ceased, and was turned with our Saviour; and, in the stead of it, the religious observation of that day, on which the Son of God rose from the dead, by the constant practice of the blessed Apostles, was transmitted to the Church of God, and so continued in all ages.—*Bishop Pearson*.

2. Intermission of pain or sorrow; time of rest.

Never any *sabbath* of release

Could free his travels and afflictions deep.

Daniel, Civil Wars of York and Lancaster.

Nor can his blessed soul look down from heav'n,

Or break the eternal *sabbath* of his rest,To see her miseries on earth. *Dryden*.Peaceful sleep out the *sabbath* of the toils,

And wake to rapture in a life to come.

Pope, Mædonian, to Mrs. M. B. on her Birthday.**Sabbathbreaker.** s. Violator of the sabbath day by labour or wickedness.The murder is the greatest *sabbathbreaker*, because his plough goeth every Sunday.—*Bacon, Essays*, of Unholy.**Sabbathless.** adj. Having no Sabbath, or no rest like that of a Sabbath; having no intermission of labour, or interval of rest.Although men should refrain themselves from injury and evil acts, yet this innocent and *sabbathless*

SABI

pursuit of a man's fortune leaveth not tribute,
which we owe to God, of our time.—*Bacon, Advancement of Learning*.**Sabbatic.** adj. Sabbatical.This salutary view is only and effectually pursued by due attendance on *sabbatic* duty. This is the true method to make an impression on the heart. They that go not to divine worship cannot know the morality of actions; and have no impulse on their minds to do what is good, to abstain from what is evil.—*Stukely, Palæographia Sacra*, p. 29.**Sabbatical.** adj. Resembling, belonging to, the sabbath; enjoying or bringing intermission of labour.In reckoning the *sabbatical* years, this rule is to be observed, that the same year which endeth one jubilee, beginneth the next. *Gregory, Posthuma*, p. 138: 1640.The appointment . . . of the *sabbatical* year, and after the seventh *sabbatical* year, a year of jubilee, is a circumstance of great moment.—*Furber*.In their seventh, or *sabbatical* year, in which the produce of all estates was given up to the poor, one of these regulations is on the different work which must not be omitted in the sixth year, but (because the seventh being devoted to the poor), the produce should be unfairly diminished, and the public benefit arising from this law be frustrated. Of whatever is not perennial, and produced that year by the earth, no money may be made; but what is perennial may be sold.—*J. Diacudi, Curiosities of Literature*, The Talmud.**Sabbatism.** s. Rest, as that of the sabbath.Thus in that *sabbatism*, or rest, that the author to the Hebrews exhorts them to strive to enter into through faith and obedience.—*Dr. H. More, Conference Sabbatica*, p. 210: 1652.**Sabian.** adj. Connected with, relating to, constituted by, Sabianism.It is generally asserted that the old religion of the Arabs was entirely *Sabian*; but I can offer no little accurate information concerning the *Sabian* faith, or even the meaning of the word, that I dare not yet speak on the subject with confidence.—*Sir W. Jones, Discourse*, &c., on the *Arabians*.The popular worship of the Irànians under Hushang was purely *Sabian*; a word, of which I cannot offer any certain etymology, but which has been derived by grammarians from *Sabá*, a host, and particularly the Host of Heaven, or the celestial bodies, in the adoration of which the *Sabian* ritual is believed to have consisted; there is a description in the learned work just mentioned, of the several Persian temples dedicated to the Sun and Planets, of the images adorned in them, and of the magnificent processions to them on prescribed festivals, one of which is probably represented by sculpture in the ruined city of Jemshid.—*Id.*, *Discourse*, &c., on the *Persians*.**Sabian.** s. Believer in the Sabian religion; believer in Sabatism, or Sabianism.Concerning the first institution of learning and religion among the *Sabians*, there is not any agreement of authors. . . . Epiphanius, and the author of the Chronicon Alexandrinum, affirm that *Sabianism* began in the time of Serug. This Hellenism some

conceive to be the same with the *Sabeen* superstition; what the Greek fathers call *Hellenism*, the *Sabians* term *Goth*, the *Arabians* *Aljahidion*, the *Time of Ignorance and Paganism*. . . . We cannot doubt but that the idolatrous worship of *Ely* and of the *Sun* (ascribed to the *Sabeans*) was of great antiquity. . . . That *Terah*, father of *Abraham*, was bred up in this doctrine may be conjectured from *Joshua* xiv. 2, where he is reckoned among those that served strange gods. *Philo* terms him an astronomer, one of those that are versed in mathematics. Of *Abraham*, son of *Terah*, *R. Maimonides* expressly saith, 'It is well known that our father *Abraham* was educated in the faith of the *Zibians*, who held there is no God but the stars. . . . This thing afterwards *Elris* taught his sons and said, 'O sons, know that ye are *Sabeans*, learn therefore to read books in your youth. Now *Sabeans* are writers of whom the High (he means *Mahomet*) said the *Sabeans* and the *Nazarenes*. . . . Afterwards the *Sabeans* were divided. . . . The book of *Isaiah* the *Sabian*, wherein he argues in defence of the law of the *Sabians*.—*Stanley, History of Philosophy*, pt. i. sect. i. vol. iv. pp. 81-5: 1862.

In the interim it may be proper to acquaint the reader that at this time all the history of the world was divided between two sects, that is the worshippers of images who were called the *Sabians*, and the worshippers of fire, who were called the *Mazians*. . . . This religion first began among the *Chaldeans*. . . . From the *Chaldeans* it spread over the east, where the possessors of it had the name of *Sabians*. . . . Those who mislike the notion . . . that many of the Jewish laws were made in opposition to the idolatrous rites of the *Sabians*, are much mistaken when they object against it that the *Sabians* were an inextinguishable sect. . . . The *Sabians* whom *R. Maimonides* spoke of, were a sect whose heresy had overspread almost all mankind. The remainder of this sect still subsists in the east under the name of *Sabians*, which they pretend to have received from *Sabius*, a son of *Seth*.—*Prideaux, The Old and New Testament Connected*, pt. i. b. ii.

This year he [*Mahomet*] altered the *Kibla*, that is the place towards which they directed their prayers. For it was usual among the people of the East, of all religions, to observe one particular point of the heavens, towards which they all turned their faces when they prayed. . . . The Jews . . . towards Jerusalem, . . . the *Arabians* towards Mecca, . . . the *Sabians* towards the north star.—*Prideaux, Life of Mahomet*, p. 73: 1723.

The *Sabians* do not only believe one God, but produce many strong arguments for his unity; though they also pay an adoration to the stars, or the angels and intelligences which they suppose reside in them, and govern the world under the supreme deity. . . . They go on a pilgrimage to a place near the city of *Harran* in Mesopotamia, where great numbers of them dwell, and they have also a great respect for the Temple of Mecca, and the pyramids of Egypt; fancying these last to be the sepulchres of *Seth*, and of *Knoch* and *Sabi* his two sons, whom they look on as the first propagators of their religion; at these structures they sacrifice a cock and a black calf, and offer up incense. Besides the book of *Psalm*, the only true scripture they read, they have other books which they esteem equally sacred, particularly one in the *Chaldean* tongue which they call the book of *Seth*, and is full of moral discourses. This sect say, they took the name of *Sabians* from the above-mentioned *Sabi*, though it seems rather to be derived from *Saba* or the head of heaven, which they worship. Travellers commonly call them Christians of *St. John* the Baptist, whose disciples also they pretend to be, using a kind of baptism, which is the greatest mark they bear of Christianity. This is one of the religions, the practice of which *Mohammed* tolerated (on paying tribute), and the professors of it are often included in that expression of the *Koran*, those to whom the scriptures have been given, or literally People of the Book.—*Sale, Translation of the Koran, Preliminary Discourse*, sect. i.

(See, also, under *Sabianism*.)

Sabianism. *s.* [For the derivation which, until lately, has passed for the likeliest, see the second extract under *Sabian* (*ult.*); for the one that will probably be henceforth recognized see the remarks on the meaning of the word. The spelling with an *e*, as in the second extract from *Prideaux*, suggests a false connection with *Sabei*, the geographical term; especially when the accentuation is on the second syllable. The title of the work by *Chwolson*, which has beyond all comparison, illustrated the subject is 'Die *Sabier* und der *Sabianismus*,' in which the *a* is ignored. It is probable, however, that in English, the forms *Sabian* and *Sabianism*, which have long been current, will keep their ground.] System of religious belief with certain sects so called either by themselves or others;

name for certain religious systems, of lux application, but generally, perhaps always, suggestive of the worship of the heavenly bodies, especially the sun.

In a remote period of antiquity, *Sabianism* was diffused over Asia by the science of the *Chaldeans* and the arms of the *Assyrians*. From the observations of two thousand years, the priests and astronomers of *Babylon* deduced the eternal laws of Nature and Providence. They adored the seven gods, or angels, who directed the course of the seven planets, and shed their irresistible influence on the earth. The attributes of the seven planets, with the twelve signs of the zodiac and the twenty-four constellations of the northern and southern hemisphere, were represented by images and talismans; the seven days of the week were dedicated to their respective deities; the *Sabians* prayed thrice each day; and the temple of the moon at *Haran* was the term of their pilgrimage. But the flexible genius of their faith was always ready either to teach or to learn; in the tradition of the creation, the deluge, and the patriarchs, they held a singular agreement with their Jewish captives; they appealed to the secret books of *Adam*, *Seth*, and *Knoch*; and a slight infusion of the gospel has transformed the last remnant of the Polytheists into the Christians of *St. John*, in the territory of *Bassora*. . . . Sole confessions *Sabianism* with the primitive religion of the *Arabs*.—*Gibbon, Decline and Fall of the Roman Empire*, ch. l. and note. (Ord MS.)

That both the import and the etymology of this term have long been matters of uncertainty has been shown both by the explanation and the extracts. The work, however, by *Chwolson*, already referred to, has removed the chief difficulties.

1. The word is Asiatic and Mahometan, being foreign to the classical and ecclesiastical writers. So far as it is Jewish, it is found where the contact between the Jews and the Mahometans has been the greatest.

2. It was applied by the Mahometans to certain religious systems different from their own; but it was not the name by which those systems were designated by the communities which upheld them—not, at least, in the first instance.

3. It is applied in the *Koran*, to one community; by the end of the ninth century it applies to another and a different one.

In detail.—1. Those to whom the term, as used in the *Koran* applied, were the communities who called themselves *Mendai*, &c., whose occupations were the alluvial districts of the Lower Euphrates; and whose creed was that of the old *Chaldeans*, upon which, at the beginning of the second century of our era, were engrafted certain elements from the allied creed of the Persian Magi, and others from the heretical speculations of the Greek Christians. The result was a mixture of the original creed, Parseeism, and Gnosticism. From their practice of frequent ablutions, they were called by the population around them *Sabian* or *Washers*; by which name they were known to *Mahomet*. The best name for these is *Mendai*, *Mendeans*, or *Mendaites*; the worst, perhaps, The Christians of *St. John* the Baptist; this latter being, probably, the result of a confusion between the notions of washing and baptizing. These are the true *Sabians* of *Chwolson*.

2. The *Pseudo-Sabians* of *Chwolson* belong to the Middle, rather than to the Lower, Euphrates; their occupations being the parts about *Haran*, or *Charræ*, in Mesopotamia, and their creed the original paganism of the district, modified by Greek and Syrian influences; pagan, christian, and philosophic. These applied the name *Sabian* to themselves; but not until the ninth century. The reason was this. The *Mendai*, to whom the term as used in the

Koran applied, were placed upon the same favoured footing as the Christians, and the Jews, i.e. as the believers in a true God, and as the holders of a canonized creed—a Religion of a Book. This made their name a safeguard against excessive persecution; and, as such, it was borrowed, appropriated, or adopted by the communities under notice when persecuted by the Caliph *Al-mamun*.

These two communities give us the *historical Sabianism* of *Chwolson*, to which he opposes the import of the term as indefinitely applied to certain religions, which, in the eyes of the later Mahometans (to whom, after the first three centuries of their era, the original application was unknown), were, in different ways, idolatrous; especially in the way of sun-worship, star-worship, or the worship of the host of heaven in general.

These views, so far as the meaning and derivation of the word go, are likely to command acceptance: nor will they be materially invalidated even if future criticism connect *Mendeanism* with the Christianity of *St. John* the Baptist, and the true and false *Sabianisms* with one another, more closely than is done by our author: whose object was to separate, for the sake of clearness, rather than to combine, for the purposes of generalization.

Notwithstanding, however, the light that he has thrown over an obscure subject, it is doubtful whether the application of the word, as an English term, he finally settled. There is evidently a tendency to invest it with more generality than it has as applied either to the creed of the *Mendians*, to whom it was attached by their neighbours, or to that of the *Harmites*, who borrowed it for themselves: neither of whom it suits exactly, and neither of whom require it—*Mendean* and *Harmitic* being sufficient.

For that division, however, of religions, the leading principle of which is the cultus of heavenly bodies, a general term is wanted; and this *Sabianism* supplies: or, failing its adoption in this sense, it is convenient as a generic name to certain undoubted congeners of the two creeds under notice, still extant in different parts of south-western Asia, viz., the *Shemshiyah*, the *Jeziel*, the *Nasariyeh*, the *Druse*, the *Ismaeliyeh*, and other creeds less generally known; but in all of which the main elements are the same, viz., the original creed of the district (the ground-work of which was the same throughout), and elements, in different proportions, from *Judaism*, *Christianity*, *Mahometanism*, *Greek philosophy*, and heresies of a *Manichean* character. To the editor, at least, the division is natural, and the name both needed and apposite.

Sabine. *s.* Savine.

Sabine or *savin* will make fine hedges, and may be brought into any form by clipping, much beyond trees.—*Mortimer, Husbandry*.

Sable. *s.* [German, *zobel*; Russian, *sobel*.] Fur-bearing animal of the genus *Mustela* (*zibellina*).

Sable is word of great personages, and brought out of Russia, being the fur of a little beast of that name, esteemed for the perfectness of the colour of the hairs, which are very black. Hence *sable*, in heraldry, signifies the black colour in gentleman's arms.—*Peacham, On Blazoning*.

Fiercely running in upon him, with tumultuous speech, he violently taught from his head his rich cap of *sables*.—*Knollys, History of the Turks*.

The peacock's plumes thy tuckles must not fail,
Nor the dear purchase of the *sable's* tail.

Sable, so much celebrated for its rich fur [is] brown, with some spots of white on the head, and is distinguished from the [common marten] by having hair even under the toes. It likewise inhabits the most frozen mountains. The hunting of this animal in the midst of winter through eternal snow is one of the most painful of human labours. The pursuit of *sable* first gave occasion to the discovery of the eastern regions of Siberia.—*Translation of Currier's Rhyme Animal*.

Among the furs which always rank very high . . . may be specified the Siberian *sable* and the black and silver fox. These articles are at all times comparatively very scarce, and command high prices.—*Mculloch, Dictionary of Commerce, Fur Trade*.

Sable, *adj.* [Fr.] Black. *Heraldic and rhetorical*.

By this the dawning daylight can to fade,
And yield his room to sad surrendering night,
Who with her *sable* mantle can to shade
The face of earth, and ways of living wight.

Spenser, Faerie Queen.
They soon begin that track play,
And with their smoky canons banish day:
Night, horror, slaughter, with confusion meet,
And in their *sable* arms embrace the fleet. *Waller*.
Adorning first the genius of the place,
And night, and all the stars that gild her *sable*
throne. *Dryden*.

As the first element in a compound.

With him intruded
Sat *sable*-robed night, eldest of things,
The consort of his reign. *Milton, Paradise Lost*, ii. 962.

Used substantively.

Sable, in engraving, is expressed by both horizontal and perpendicular lines crossing each other. —*Encyclopædia Britannica*.

Sabot, *s.* [Fr.; Spanish, *zapato*.] Wooden shoe.

At *Guine* language, like the clattering noise of
sabots.—*Bishop Traill, Against Hobbes*, p. 20.

They wear large clumsy shoes, almost as bad as
the French *sabots*.—*Scribner, Travels through Spain*, letter xiv.

Sabre, *s.* [Fr.] Short sword with a convex edge.

To me the cries of fighting fields are charms;
Keen be my *sabre*, and of proof my arms;
I ask no other blessing of my stars,
No prize but fame, no mistress but the wars.

Dryden, Aurengzebe, iii. 1.
Sabre, *v. a.* Strike, cut down, with a sabre.

You sent troops to *sabre* and layonet us into submission.—*Burke*.

Sabulous, *adj.* [Lat. *subulosus*, from *subul*-
lum = fine sand, grit.] In *Medicine*. Ap-
plied chiefly to deposits in urine; gritty,
gravelly, sandy.

Sabulous deposits in the urine are of various cha-
racters, but, as far as their leading chemical varieties
are concerned, they may be conveniently termed
white sand and red sand; the former consisting
usually of phosphate of lime, or ammonio-magnesian
phosphate, or a mixture of the two; whilst in the
latter uric acid predominates.—*Brande, Manual of Chemistry*, p. 1816; 1848.

Sac, *s.* [Fr.; Lat. *saccus* = sack. Without
the final *h*.] In *Anatomy*. Term of common,
and somewhat wide application, denoting
any part of the body which has the cha-
racter of a sack, or pouch; also, any pro-
truded portion of a membrane, not naturally
sack-like, from mechanical pressure from
beneath.

3 Surgeons understand, by the term *hernia*, a tu-
mour formed by the protrusion of some of the vis-
cera of the abdomen, out of that cavity, into a kind
of sac, composed of the portion of peritoneum, which
is pushed before them. However, there are certainly
cases which will not be comprehended in this defi-
nition; either because the parts are not protruded
at all, or have no hernial sac. It is only in rare cases
that the sac is wanted; as, for example, where the
hernia has been produced by the operation of great
violence, or has been prevented by a wound of the
abdominal prietes, or an attempt at a radical cure
has been made with caustic. The sac is also some-
times rendered imperfect by laceration or ulceration.
Some viscera, which occasionally protrude,
are not included in the peritoneum, as the bladder
and ovary; and when they are considerably dis-
placed, they draw after them the portion of peri-
toneum connected with them, which forms a *sac*
into which air, or liquids may fall. —*Mc Cooper, Dic-
tionary of Practical Surgery, Hernia*.
The *hernial sac* is a membranous reservoir of a
vertically elongated form. . . . Above . . . it forms a

cul-de-sac or blind end. Below it passes into the
usual duct. —*Warton Jones, in Todd's Cyclopædia
of Anatomy and Physiology*, art. *Lacrimal Organs*.

Saccade, *s.* [Fr.] Violent check the rider
gives his horse, by drawing both the reins
very suddenly: a correction used when
the horse bears heavy on the hand.

Saccage, *s.* Sackage.

With as small a matter Psammethes saved the
sackage of a city.—*Filliam, Roderic*, ii. 67.
I shall not enquire how far the sackage of Paris
may yet be in the power of the allies to accomplish.
—*Strickland on Burke*, p. 61.

Saccate, *s.* Sack-shaped: (common in Bo-
tany).

A shallow pouch renders the calyx gibbous; a
deeper *saccate*, and a long narrow pouch, forms
what is called a spur.—*Hoffm., Elementary Course
of Botany*, § 175.

Sacchariferous, *adj.* [Lat. *fero* = I bear.]
Producing sugar.

Sacchariferous trees.—*History of the Royal So-
ciety*, iv. 380.

Saccharimeter, *s.* [less properly *saccharo-
meter*.] Instrument for measuring the
amount of sugar in solution in any liquid.

[The] strength [of a wort] is frequently adjusted
by its density, which is determined by an instru-
ment not quite correctly called a *saccharometer*,
since it is influenced by all the contents of the wort
and not the sugar only. It is a balance instrument,
resembling the common hydrometer, . . . so ad-
justed in weight as to sink to the point marked 70,
in distilled water at the temperature of 70°, and
when immersed in a liquor of the same temperature,
and of the specific gravity of 1.100, it is buoyed up to
the mark 100, just above the bulb. The intermediate
space is divided into 100 parts, so as to indicate in-
termediate degrees of strength.—*Brande, Manual of
Chemistry*, p. 1636; 1848.

Saccharine, *adj.* [Lat. *saccharum* = sugar.]
Having the taste or any other of the chief
qualities of sugar.

Milk is an essential *saccharine* salt, sweetening
from the leaves of most plants.—*Arbuthnot, On the
Nature and Choice of Aliments*.

In true diabetes the urine is never without sugar.
The quantity may indeed be small; and it may not
be sensible to that coarse test, the taste; but modern
observers almost all agree in rejecting any species
of diabetes in which the urine is not at all *sacchari-
ne*. This condition of the urine was first described
in 1684, by our learned countryman Dr. Willis.—*Sir
T. Watson, Lectures on the Principles and Practice
of Physic*, lect. lxxviii.

Saccharine matter exists in the roots of liquorice.
—*Hoffm., Elementary Course of Botany*, § 439.

Sacerdotal, *adj.* Priestly; belonging to the
priesthood.

They have several offices and prayers, especially
for the dead, in which functions they use *sacerdotal*
garments.—*Bishop Stillingfleet*.

He fell violently upon me, without respect to my
sacerdotal orders.—*Dryden, Spanish Friar*, v. 2.

If simple powers, granted by the rulers of this
world, add dignity to the persons intrusted with
these powers, behind the importance and extent of
the *sacerdotal* commission.—*Bishop Atterbury*.

Sacerdotalism, *s.* Sacerdotal system.

As there were three degrees of attainment, light,
purity, knowledge (or the divine vision), so there
were three orders of the earthly hierarchy, bishops,
priests, and deacons; three sacraments, baptism,
the eucharist, the holy eucharist; three classes, the
baptized, the communicants, the monks. How sub-
lime, how exalted, how welcome to the *sacerdotal*
law of the West this lofty doctrine. The celestial
in it were as themselves; themselves were
formed and organised after the pattern of the great
orders in heaven.—*Adams, History of Latin Chris-
tianity*, b. xiv. ch. li.

Sachel, *s.* See Satchel.

Puckered together like a *sachel*.—*Junius, Sin
Stigmatized*, p. 19; 1639.

one.

Now the great work is done, the corn is ground,
The *grist* is *sack'd*, and every sack well bound.

Butler.

Sack, *v. a.* Take by storm; pillage; plunder.

Edward Bruce spoiled all the old English-pale
inhabitants, and *sack'd* and razed all cities and cor-
porate towns.—*Spenser*.

I'll make thee stoop and bend thy knee,
Or sack this country with a mighty.

Shakespeare, Henry VI. Part I. v. 1.
What cities *sack'd*?

Who sees these dismal heaps but would demand
What barbarous invader *sack'd* the land?

The pope himself was ever after unfortunate,
Rome being twice taken and *sack'd* in his reign.—
South, Sermons.

The great magazine for all kinds of treasure is the
bed of the Tiber; when the Romans lay under the
apprehensions of seeing their city *sack'd* by a bar-
barous enemy they would take care to bestow such
of their riches this way as could best bear the water.
—*Addison*.

Sack, *s.* [Spanish, *saco*.] Storm of a town;

ment serving as a bass in concerts; trom-
bone.

Make the sun dance. *Shakspeare, Coriolanus*, v. 4.

Säckcloth, *s.* Cloth of which sacks are
made; coarse cloth sometimes worn in
mortification.

To augment her painful penance more,
Thrice every week in ashes she did sit,
And next her wrinkled skin rough *säckcloth* wore.

Thus with *säckcloth* I invest my woe,
And dust upon my clouded forehead throw.

and constantly day and night to implore God's
mercy for the sin he had committed.—*Ayliffe, Pa-
rergon Julia Cæsar*.

Säckclothed, *adj.* Wearing sackcloth.

To be jovial, when God calls to mourning; to glit-

Wood goes about with *säckfuls* of drum, obviously
misrepresenting his prince's countenance.—*Swift*.

Säckage, *s.* Act of storming and plundering
a place: (notwithstanding the authority of
Burke for the *-re* in the spelling, and the
Spanish *saco*, the *k* is generally and conve-
niently adopted; the *sac* in *Anatomy* being
the only word in which it is admitted on
the principle of differentiation).

Sacrament, *s.* [Fr.; Lat. *sacramentum*.]

1. Oath; any ceremony producing an obli-
gation.

Here I begin the *sacrament* to all.

B. Jonson, Catiline's Conspiracy.

2. Outward and visible sign of an inward
and spiritual grace.

As often as we mention a *sacrament*, it is im-
properly understood; for in the writings of the ancient
fathers all articles which are peculiar to Christian
faith, all duties of religion containing that which
seems or natural reason cannot of itself discern, are
most commonly named *sacraments*; our restraint of
the word to some few principal divine ceremonies,
importeth in every such ceremony two things, the
substance of the ceremony itself, which is visible;
and besides that, somewhat else more secret, in re-
ference whereunto we conceive that ceremony to be
a *sacrament*.—*Hooker, Ecclesiastical Polity*.

3. Eucharist; holy communion.

As we have taken the sacrament,
We will unite the white rose with the red,

morning received the sacrament, with his son, and

Sacramental. adj. Constituting a sacrament; pertaining to a sacrament.

To make complete the outward substance of a
sacrament, there is required an outward form, which

interpretation can be put upon them, it can only
vary the way of the sacramental efficacy, but it cannot
enlarge the blessing.—*Jeremy Taylor.*

to point out the holy and mysterious Trinity by the
triangle of the heart.—*Id., Sermons, vol. i. p. 219.*

administration of it be what it will.—*Sir R. L'Estrange.*

It was . . . a measure of no inconsiderable hazard
and difficulty. For such it surely was under a
system of government which rested so much on
equity, and in spite of the peculiar sacredness
which the English attach to all freehold property, I
imagine so many prerogative hereditary features, as
possessions, which conveyed more than a third part
of the house of lords, and to subject so many estates
which the law had rendered inviolable, to various
of exchequer and forfeiture that had never been held
applicable to their tenure. *Hallam, Constitutional
History of England, ch. ii.*

Sacredness. adj. Capable of being offered in sacrifice. *Rare.*

Although Jephtha's vow ran generally for the
world, whatsoever shall come forth; yet might it be

would not have sacrificed either horse or dog.—*Sir
T. Browne, Vulgar Errors.*

Sacrificant. s. One who offers a sacrifice.

Sal ammoniac is found still in Ammonia, as men-
tioned by the ancients.—*Id.*

The manufacture of *sal ammoniac* may be traced
to the remotest era. Its name is derived from
Ammonia, or the temple of Jupiter Ammon, in Egypt,
near to which the salt was originally made. *Sal*
ammoniac exists ready formed in several animal
products. The dung and urine of camels contain a
sufficient quantity to have rendered its extraction
from them a profitable Egyptian art in former
times, in order to supply Europe with the article.
In that part of Africa, fuel being very scarce, re-
course is had to the dung of these animals, which is
dried for that purpose by plastering it upon the
walls. When this is afterwards burned in a peculiar
kind of furnace, it exhales a thick smoke, replete
with *sal ammoniac* in vapour; the rest of course
contains a portion of that salt, condensed along
with other products of combustion.—*Ure, Dic-

1. Animal supposed to live in the fire, and
imagined to be very poisonous. Ambrose

import see extract from Owen.)

also to extinguish it. — *Bacon, Natural and Experi-

progress of growth in the true *salâmander* from a
compressed to a rounded form. The female brings

of reproduction. — *Owen, On Branches and Use, Dic-

A *sallient* point so first is call'd the heart, By turns dilated, and by turns constrict, Expects and entertains the purple guest.

Sir K. Blackmore.

What hope or fear or joy is thine? Who talketh with thee, Achme? For sure thou art not all alone, Do leaping hearts of *sallient* springs Keep measure with thine own?—*Trappan*.

What a progress, since the first *sallient* point of the Breton Committee.—*Cutcliffe, The French Revolution*, pt. ii. li. ch. v.

The doctor endured the evil with exemplary patience, noting down in the leaves of his pocket-book what appeared to him the *sall* of points in this fortress of disease to which he had had siege.—*Lord Lytton, My Novel*, ii. xli. ch. iv.

Salination. *s.* Act of washing with, or soaking in, salt liquor.

We read in Plutarch, that Philopon Libertus washed the body of Pompey with salt water, which perhaps might be either because it was more obdurate, or that it helped to prevent putrefaction; and it is not improbable the Egyptians might have been accustomed to wash the body with the same pickle they used in *salination*, in order to preserving and embalming it.—*Greenhill, Art of Embalming*, p. 54.

Saline. *adj.* [Lat.] Consisting of, constituting, salt.

This *saline* sap of the vessels, by being refused ejection of the parts, declares itself in a more hostile manner, by drying the radial moisture.—*Morrey, Discourse of Consumption*.

If a very small quantity of any salt or vitriol be dissolved in a great quantity of water, the particles of the salt or vitriol will not sink to the bottom, though they be heavier in specie than the water; but will evenly diffuse themselves into all the water, so as to make it as *saline* at the top as at the bottom.—*Sir I. Newton, Opticks*.

As the substance of coagulations is not merely *saline*, nothing dissolves them but what penetrates and relaxes at the same time.—*Arbuthnot, On the Nature and Choice of Aliments*.

Salinous. *adj.* Saline. *Rare*.

We do not easily ascribe their induration to cold; but rather to *salinous* spirits and concretion juices.—*Sir T. Browne*.

Saliva. *s.* [Lat.] Spit.

Not meeting with disturbance from the *saliva*, I the sooner reprobated them.—*W. Warton, Surgery*.

Salival. *adj.* Salivary.

The woodpecker, and other birds that prey upon flies, which they catch with their tongues in the roes of the said glands have a couple of bags filled with a viscous humour, which, by small canals, like the *salival*, is brought into their mouths, they dip their tongues therein, and so with the help of this natural birdlime attack the prey.—*Grew*.

Salivary. *adj.* Relating to, constituted by, connected with, salivary.

The necessity of spit to dissolve the aliment appears from the contrivance of nature in making the *salivary* ducts of animals which ruminates, extremely open; such animals as swallow their aliment without chewing want *salivary* glands.—*Arbuthnot*.

Salivate. *v. a.* Purge by the salivary glands.

She was possessed with the scandal of *salivating*, and went out of town.—*W. Warton, Surgery*.

The purely antiphlogistic power of mercury is displayed most eminently in the inflammatory diseases of intertropical climates. Here the race is fairly run between the actions and movements raised within the body by the disease, and the counteractions and counter-movements raised by the remedy. The work of destruction by the disease is the work of a day or two. And the work of a day or two must be the work of counteraction by the remedy. Even within this time mercury must be made to *salivate*, if mercury is made to cure. If the disease outrun the remedy, the patient dies; if the

remedy outrun the disease, the patient is saved.—*Dr. P. M. Latham, Lectures on certain Subjects connected with Clinical Medicine*, lect. xiii.

Salivation. *s.* [Lat. *salivatio*, -onis.] State produced, or indicated, by an inordinate secretion of saliva.

Healthe of ill-tasted things in the mouth will make a small *salivation*.—*Grew, Cambridgæ Sacra*. But is mercury altogether forbidden as a remedy for inflammation in serous constitutions? I am far from saying so; for even in them I have sometimes seen inflamed organs plainly and palpably rescued from destruction by mercury pushed to *salivation*.—*Dr. P. M. Latham, Lectures on certain Subjects connected with Clinical Medicine*, lect. xiii.

Salivous. *adj.* Consisting of, abounding in, having the nature of, spittle.

There happened an elevation of the uvula, through the abundance of *salivous* humour flowing upon it.—*W. Warton, Surgery*.

Sallet. *s.* [Fr. *sallade*.] Headpiece. *Ob-salite*.

But for a *sallet* my brainpan had been cleft with a brown bill.—*Shakespeare, Henry VI. Part II*, iv. 10.

Salloting. *s.* Salad.

Now some early *salloting*.—*Mortimer, Husbandry*.

Spenser, Faerie Queene.

Sallow. *s.* [A.S. *sallh*; Lat. *sallix*; Gr. *salix*, with the aspirate *h* = *s*.] Kind of willow.

So bare and reeds on banks of rivers burn,

Remain to enthrall thy vines.

Dryden, Tristram of the Geography, ii. 573.

Many species have long flexible shoots, and are called *salix*, under which name they are extensively employed by the workers in wicker; others are not flexible, but form small trees or rough bushes, named *salices*. The latter, called *Salix nureux* by the French, yield the best kind of charcoal for military purposes; they are all, however, burnt for the preparation of this substance.—*Brande and Cox, Dictionary of Science, Literature, and Art*.

Sallow. *adj.* [A.S. *sallowig*.] Sickly, in the way of colour; yellow.

What a deal of brine

Hath wash't thy *sallow* cheeks for Rosaline!

Shakespeare, Romeo and Juliet, ii. 3.

No roses bloom upon my fading cheek, Nor bounding grace wanton in my eye; But haggard grief, lean-looking *sallow* Care, And pluming Discontent, a cruel train, Dwell on my brow, all hideous and forbore.

Rome.

Sallowness. *s.* Attribute suggested by *Sallow*; sickly paleness.

A fish-diet would give such a *sallowness* to the celebrated beauties of this island, as would scarce make them distinguishable from those of France.—*Johnson*.

Sally. *s.* [Fr. *sallie*.]

1. Eruption; issue from a place besieged; quick egress.

The deputy sat down before the town for the space of three or four months; during which time *sallies* were made by the Spaniards, but they were beaten in with loss.—*Bacon*.

2. Range; excursion.

Every one shall know a country better that makes often *sallies* into it, and traverses it up and down, than he that, like a mill-horse, goes still round in the same track.—*Locke*.

These passages were intended for *sallies* of wit; but whence comes all this rage of wit?—*Bishop Stillingfleet*.

4. Escape; levity; extravagant flight; frolic; wild gaiety; exorbitance.

opined Love and Marriage.*

Mounting his horse [he] rode back to Kenilworth
by a round and circuitous road, and entered the
castle by a small sally-port in the western wall.

Salmagundi. s. [Fr. *salmagundi*, and *salmi-
gundi*; Lat. *salmagundi*; Gr. *σαλμαγυνδι*; 'quas-
cumque conditanea ad victum in vasis ser-
vantur, interdum siccæ, sæpe cum liquamine
et jure, ut mulla, pyra, fici, nva, rapæ, &c.'
(Columella, l. xii. c. 4.) Pickles, preserves,
conserves. Hence *salmagundus* - maker or
seller of the same. All the examples, in
Faccioli, of the use of this word are from
one author, Columella. Todd, in commen-
tating upon the derivations suggested in
the extracts, has truly stated that this is
the word of which it is a corruption.] Dish,
varying with the receipt, but originally
consisting of a medley of spiced, salted, or
otherwise highly-flavoured viands. Wedge-
wood connects it most especially with the
Spanish *sulpicón* - cold meat chopped small
and dressed with oil, vinegar, salt, and
pepper. In this case, the nearest approach
to *sulpicón* are the lobster and fish salads.

[*Salmagundi*] is said to be corrupted from *salmi*
man joint, or 'salmi a man joint.' *Dr. Johnson.*

The French word is *salmagundi*; and the author of
La Vie Privée des Français, says, it originally sig-
nified an entertainment among tradesmen, or low
artisans, where each person brought a different dish.
Cotgrave calls it a hash, made of cold meat sliced
and heated in a plentifulish, with crumbs of bread,
wine, verjuice, vinegar, nutmeg, and orange peel. -
Malone.

Salmi. s. [same origin as *Salmagundi*;
the meaning of the two being alike, i.e. both
denoting a mixture of viands.] In *Cookery*.
Ragout of game previously roasted.

When a superlative *salmi* is desired, the birds
must be scarcely more than half roasted for it. -
E. Acton, Modern Cookery, p. 232: 1863.

Salmón. s. Fish of the genus *Salmo* (species
salar).

The *salmon* is accounted the king of fresh-water
fish, and is bred in rivers relative to the sea, yet so
far from it as admits no tincture of brackishness.
He is said to cast his spawn in August; some say
that then they dig a hole in a safe place in the gravel,
and there place their eggs or spawn, after the mother
has done his natural office, and then cover it over with
gravel and stones, and so leave it to their Creator's
protection; who, by a gentle heat which he infuses
into that cold element, makes it breed and beget
life in the spawn, and to become salmets early in the
spring; they haste to the sea before winter, both
the mother and spawner. Sir Francis Bacon ob-
serves the age of a *salmon* exceeds not 6 years.
After he is got into the sea he becomes, from a salmet
not so big as a gudgeon, to be a *salmon*, in as short
a time as a gosling becomes a goose. - *J. Walton, Complete Angler.*

Let us compare one of the largest trout with a
salmon. I have selected two fresh-run fish, which,
from their curv'd lower jaws, are, I consider, both
males. The *salmon*, you see, is broader; has a tail
rather more forked; and the teeth in proportion
are rather smaller. The trout, likewise, has larger
and more black brown spots on the body; and the
head of the trout is a little larger in proportion.
The *salmon* has fourteen spines in the pectoral fin,
ten in each of the ventral, thirteen in the anal,
twenty-one in the caudal, and fifteen in the dorsal.
The *salmon* measures thirty-two and a half inches
in length, and twenty-one inches in girth, and his
weight is eleven pounds. We will now open them.
The stomach of the *salmon*, you perceive, contains
nothing but a little yellow fluid; and though the
salmon is twice as large, does not exceed much in
size that of the trout. The stomach of the trout,
unlike that of the *salmon*, will be found full of food;
we will open it. See there are half-digested sand-
eels which come out of it. - *Sir H. Dary, Salmonia,
Fourth Day.*

This specific distinction, in the genus *Salmo* will
be illustrated by referring to the number and situa-
tion of the teeth, the form of the different parts of
the gill-covers, and the size, form, and relative
situation of the fin. . . . These colours, differing but
little, are in a great degree common at the same
period of the year to the three species that are the

most numerous, as well as the most valuable;
namely, the true *salmon*, the grey trout, and the
salmon-trout. . . . In the *salmon*, the posterior edge
of the gill-cover . . . forms part of a circle. The
teeth of the *salmon* are short, stout, pointed, and
recurved. . . . As further specific distinctions in the
salmon, I may add that, according to Dr. Richard-
son, the caecal appendages are in number from
sixty-three to sixty-eight; and several observers
have stated the number of vertebrae to be sixty,
which I have repeatedly found correct. - *Yarrell, History of British Fishes.*

Salmón-peñi. s. [two words.] Young sal-
mon.

These small-sized fish, when under two pounds'
weight, are called by some of the London fish-
mongers *salmon-peni*; when larger, grisei. . . . In
order to prevent any misconception of the terms
employed, I shall speak of the young salmon of the
first year as a pink; in its second year, till it goes to
the sea, as a smolt; in the autumn of the second
year, as *salmon-peni*, or grisei, and afterwards, as
adult salmon. - *Yarrell, History of British Fishes.*

Salmón-trout. s. [two words.] In *Ichthyo-
logy*. British fish of the genus *Salmo*
(trutta); sea-trout; phinock.

There is in many rivers that relate to the sea
salmón-trout as much different from others, in
shape and spots, as sheep differ in their shape and
business. - *J. Walton, Complete Angler.*

The *salmon-trout* is, of the migrating species in
this country, the next in value to the salmon. It is
most abundant in the rivers of Scotland, and its
flesh is excellent. It is distinguished by the gill-
cover being intermediate in form between that of
the salmon and the grey trout. . . . The teeth are
more slender as well as more numerous than in the
salmon or grey trout. . . . The tail is less forked than
that of the salmon, but becomes ultimately square
at the end. . . . The Fordwich trout of Isaac Walton
is the *salmon-trout*. . . . The species of the phinock,
or hirling, of the north, the *Salmo albus* of Dr. Fleun-
ing, which I have received, so exactly resembles the
young of the *salmon-trout*, on its first return from
salt-water, that I am unable to point out any dis-
tinguishing specific character. - *Yarrell, History of British Fishes.*

Salmon-trout, or sea-trout, as it is called in Scot-
land, is now a permanent resident in a fresh-water
lake in the island of Lismore, one of the Hebrides,
and without the power of leaving it, or reaching the
sea. There it has been known for a long course of
years, perfectly reared to its ripeness, and propaga-
ted without any apparent difficulty. - *McCulloch, Journal of the Royal Institution, no. xxiv. p. 211.*

Saloón. s. [Fr. *salon*.] Spacious hall or
room; state-room.

The principal apartment of these buildings con-
sists of one or more large *saloons* - *Chambers.*

When we came in, though it was in the midst of
winter, we were carried into a room without a fire-
place; and which looked, if possible, still colder than
it felt. - I saw, said my companion, that you have no
taste, or you could not be cold in so beautiful a
saloon as this. If the present state continues,
Rushmore and other neglected statues, who might
have adorned Grecian *saloons*, though not Grecian
deserts, may come into vogue. - *Walpole.*

Ramslaw's answer was cut short by the appearance
of the groom of the chambers. 'My Lord is in the
saloon, and requests you and Mr. Leslie will do him
the honour to join him there.' The two gentlemen
followed the servant up the stairs. The *saloon*
formed the centre room of the suite of apartments.
From its size, it was rarely used save on state occa-
sions. - *Lord Lytton, My Novel, b. xiii. ch. xxxii.*

Saloóp. s. [Turkish, *salup*.] Preparation
from the root of a species of orchis. See
extract.

salup, is prepared. - *Synopsis of the Materia Ali-
mentaria.*

Sálpicon. s. Stuffing put into holes cut in

salad.)

Sálsify. s. Culinary and garden plant, of
the genus *Tragopogon*; goatsbeard.

Sálsify, or the common sort of goatsbeard, is of a
very long oval figure, as if they were coals all over

goatsbeard. - *Kenney, Elementary Course of Bot-
any, § 482.*

somewhat salt.

The distinction of salts, whereby they are dis-

criminated into acid, volatile, or *salsugineous*, if I
may so call the fugitive salts of animal substances,
and fixed or alkaline, may appear of much use in
natural philosophy. - *Boyle.*

Salt. adj. [from Lat. *salus*.] Lecherous;

Salt. s. [from A.S. *salt*.]
1. In its ordinary acceptance, *salt* is a name
applied to several substances, more or less
resembling the common kitchen salt, which
may be taken as the type of the group;
they are crystallized and soluble.

In old discourse, manhood, learning, gentleness,
virtue, and liberality, the spice and salt that season
a man's - *Shakespeare, Troilus and Cressida, l. 2.*

He perfidiously has given up
For certain drops of salt, your city Rome.

To his wife and mother. - *Id., Coriolanus, v. 5.*

Since *salt* differs much, some being flat, some vo-
latile, some acid, and some mineral, the two quali-
ties wherein they agree are, that it is easily dissoluble
in water, and affects the palate with a savour, good
or evil. - *Boyle.*

A particle of *salt* may be compared to a chaos,
being dense, hard, dry, and empty in the centre,
and rare, soft, and moist in the circumference. - *Sir
I. Newton, Opticks.*

Salt is a body whose two essential properties
seem to be, dissolubility in water, and pungent
savour: it is an active incorruptible substance; it
gives all bodies consistence, and preserves them from
corruption, and occasions all the variety of tastes.
There are three kinds of *salts*, fixed, volatile, and
essential: fixed *salt* is drawn by calcining the mat-
ter, then boiling the ashes in a good deal of water;
after this the solution is filtrated, and all the moisture
evaporated, when the *salt* remains in a dry
form at the bottom: this is called a fixitious *salt*.
Volatile *salt* is that drawn chiefly from the parts of
animals, and some purified parts of vegetables;
it rises easily, and is the most volatile of any. The res-
idual *salt* is drawn from the juice of plants by
crystallization. - *Barre.*

He had been particularly active in laying traps for the young noblemen and gentle men of the Legion.

The Prince of Wales was more than once placed in such a situation that they could severely avoid passing close to him. Were they to *salute* him? Were they to stand erect and covered while everybody else *saluted* him?—*Mucanay, History of England, ch. xxi.*

Salute. *s.*

1. Salutation; greeting.

The custom of praying for those that emerge is more ancient than these opinions heretofore; so that not any one disease has been the occasion of this *salute* and deprecation.—*Sir T. Browne.*

The king commanded him to go to the south of France, believing that nothing would contribute more to the restoring of his former vigour than the gentle *salutiferous* air of Montpellier.—*Jennia, Letters.*

Salvability. *s.* Possibility of being received to everlasting life.

The main principle of his religion, as a payd, is more destructive of the comfort of a conjugal society, than are the principles of most heretics, yet than those of jansen or athenists; for, holding that, the only *salvability*, but in the church; and that none is in the church but such as acknowledge subjection to the see of Rome.—*Bishop Sanderson, Cases of Conscience, p. 11.*

Salvation. *s.* [from Lat. *salvo* = I save; pass. part. *salvatus*; *salvator* = saviour.] Preser-

vation from eternal death; reception to the happiness of heaven.

As life and death, mercy and wrath, are matters of understanding or knowledge, all men's *salvation*, and all men's endless perdition, are things so opposite, that whosoever doth affirm the one must necessarily deny the other.—*Hooker, Ecclesiastical Polity.*

Him the Most High,

Wrapp'd in a belov'd cloud with winged steeds,

The surgeons soon despoil'd them of their arms,
And some with *salvoes* they cure.
—*Dryden, Palamon and Arcite, b. 734.*

These judgments God hath been pleased to send upon me, are so much the more welcome, as a means which his mercy hath sanctified to me as to make me repent of that unjust act.—*Eliza, Basilide*.

These external things are neither parts of our devotion, or by any strength in themselves direct causes of it; but the grace of God is pleased to move us by ways suitable to our nature, and to satisfy these sensible helps to higher purposes.—*South, Sermons*.

If sanctimony, and a frail vow between an errant barbarian and a superstitious Venetian, be not too hard for my wit and all the trills of hell, thou shalt enjoy her.—*Shakespeare, Othello*, i. 3.

There was great reason why all discreet princes should beware of yielding hasty belief to the robes of sanctimony.—*Sir W. Raleigh*.

Sanction. s. [Lat. *sanctio*, -onis; *sanctio* = I sanction; pass. part. *sanctus* and *sanctus*.]

1. Act of confirmation which gives to anything its obligatory power; ratification.
I have kill'd a slave,
And of his blood caused to be mixt with wine:
Fill every man his bowl. There cannot be
A better drink to make this sanction in.

Against the publick sanction of the peace,
Against all omens of their ill success,
With faces averse, the rout in arms resort,
To force their march.

Dryden, Translation of the Æneid, vii. 803.

This word is often made the sanction of an oath: it is reckoned a great commendation to be a man of honour.—*Seneca*.

The evil which will probably be incurred in case a command be disobeyed, or (to use an equivalent expression) in case a duty be broken, is frequently called a *sanction*, or an enforcement of obedience. Or (varying the phrase) the command or the duty is said to be sanctioned or enforced by the chance of incurring the evil. Considered as thus abstracted from the command and the duty which it enforces, the evil to be incurred by disobedience is frequently called a punishment. But as punishments, strictly so called, are only a class of sanctions, the term is too narrow to express the meaning adequately. . . . By some celebrated writers (by Locke, Bentham, and, I think, Paley), the term *sanction*, or enforcement of obedience, is applied to conditional good as well as to conditional evil, to reward as well as punishment. But, with all my habitual veneration for the names of Locke and Bentham, I think that this extension of the term is pregnant with confusion and perplexity. Rewards are indisputably motives to comply with the wishes of others. But to talk of commands and duties as sanctioned or enforced by reward, or to talk of rewards as obliging or constraining to obedience, is surely a wide departure from the established meaning of the terms.—*A. J. Austin, The Province of Jurisprudence Determined*, lect. i.

2. Law; decree ratified. *Rare*.
"The first sanction nature gave to man,
Each other to assist in what they can."

2. Place of protection; sacred asylum: (whence a *sanctuary man* is one who takes shelter in a holy place).

I'll hence forthwith unto the sanctuary,
To save at least the life of Edward's right.

Sand. s. [A.S.]

1. Particles of flint, or flintlike stone, not conjoined, or broken to powder.

Here I'll rake up the post unsanctified
Of murderous lechers.
Shakespeare, King Lear, iv. 6.

Used adjectively.
If quicksilver be put into a convenient glass vessel, and that vessel exactly stopped, and kept for ten weeks in a sand furnace, whose heat may be constant, the corpuscles that constitute the quicksilver will, after innumerable revolutions, be so connected to one another, that they will appear in the form of a red powder.—*Boyle*.

2. Barren country covered with sands.

Most of his army being slain, he, with a few of his friends, sought to save themselves by flight over the desert sands.—*Knox, History of the Turks*.

So, where our wild Scythian winds extend,
Sudden the impetuous hurricanes descend,
Wheel through the air, in circling eddies play,
Tear up the sands, and sweep whole plains away.
The helpless traveller, with wild surprise,
Sees the dry desert all around him rise,
And another'd in the dusty whirlwind dies.
Aldrich, Cato.

Prior, Second Hymn of Callimachus.

Sandalwood. s. In Botany. See extracts.

Sandal-wood, the wood of *Santalum album*, is, perhaps, the best known production of this order. *Henfrey, Elementary Course of Botany*, § 80.

Sandal or red *Santalum's* wood is the wood of the *Pterocarpus santalinus*, a tree which grows in Ceylon, and on the coast of Coromandel. . . . The coloring matter . . . has been called *sandaling*. . . . *Sandal-wood* is used in India, along with one-fourth of sapan wood (the *Cassipouira* sapan of Japan, Java, Siam, Celebes, and the Philippine Isles, principally for dyeing silk and cotton.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

These woods formerly bore the name of *Sanders* wood. White or Indian *sandal-wood* comes from *S. album*; yellow or Sandwichean, from *S. Freycinetianum* and *S. paniculatum*; while Western Australia furnishes another kind in the wood of *S. latifolium*. What is called red *sandal wood*, is another thing, and is produced by *Pterocarpus santalinus*.—*Moore, in Brando and Ure, Dictionary of Science, Literature, and Art*.

Sandarach. s. [?] Resin from *Callitris quadrivalvis*; used, when powdered, as pounce.

Sandarach is a peculiar resinous substance, the product of the *Thuja articulata*. . . . It contains three different resins; one soluble in spirit of wine, somewhat resembling pine oil, cap not soluble in that menstruum; and a third, soluble only in alcohol of 60 per cent. It is used as pounce-powder for staining over paper engravures, as incense, and in varnish.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Sandbox. s. In Botany. See extract.

The fruit of [the *sandbar*], if suffered to remain on till they are fully ripe, burst in the heat of the day with a violent explosion, making a noise like the firing of a pistol, and hereby the seeds are thrown about to a considerable distance. These seeds, when green, vomit and purge, and are supposed to be somewhat akin to nux vomica.—*Müller, Gardener's Dictionary*.

The seeds of *Omphalia* are said to be eatable if the embryo is extracted, but if this is not done it is too ratharic for food. Mr. W. Marbury says this nut is most delicious and wholesome, and speaks of it as the robust, or hognut, of Jamaica. Similar qualities reside in the seeds of *Urena reptans*, the *sandbar* tree.—*Lindley, Vegetable Kingdom*.

Sandboy. s.

1. Boy employed in carting, or carrying, sand.

2. ? Sand-hopper.

With one that sweep away the murning dew.

Shakespeare, Midsummer-Night's Dream, iv. 1.

3. Short-sighted.

Sand-grouse. *s.* Bird akin to the quails, of the genus *Pterocles*.

The deserts of Africa appear to be the metropolis of the genus *Pterocles*, or *sand-grouse*. . . . They are mostly of a small size for gallinaceous birds, being inferior to our partridges; but their plumage, without being bright or showy, is so particularly elegant, that they are peculiar favourites with most ornithologists.—*Swinhoe, in Naturalist's Library, Birds of Western Africa.*

Sandoeel. *s.* See Sandlaunce.

Sanderling. *s.* Native bird, akin to the sandpipers, of the genus *Totanus* (species *calidris*).

We reckon coots, *sanderlings*, *perwets*, and *mows*.—*Carew, Survey of Cornwall.*

The appearance of the *sanderling* in spring, when changing to the plumage of summer, is prettier than at any other season, each feather on the upper surface of the body exhibits a portion of black in the centre, edged partly with rufous and partly with the remains of the white peculiar in winter; by degrees the white edging gives place to the red; the neck in front becomes speckled, but the under surface of the body remains white all the year.—*Farrell, History of British Birds.*

The *sanderling* is a species pretty frequent on our shores during spring, autumn, and winter; but is not known to breed with us. It is widely distributed in other regions, and breeds far north, and within the Arctic Circle. The nest is said to be of rub construction, and placed in marshy situations, and the eggs to be four in number, of a dusky colour spotted with black.—*Loehly, Popular History of British Birds, Eng. p. 204.*

Sanders. *s.* Same as wood.

rich in stumps, and spices, and hita
sanders. Sir T. Herbert, *Relation of some Years
Travels into Africa and the Great Asia*, p. 370.
Aromatize it with *sanders*.—*Wise, Surgery.*

Sandgrass. *s.* Grass that grows in sand; specially applied to certain species which from binding the sand by their spreading roots, are valued for the service they do in helping to resist the encroachments of the sea.

The *sandgrass* *s.* *Elymus arenarius*, *Arundo arenaria*, are valuable binding weeds on shifty sandy shores.—*Huxley, Elementary Course of Botany, § 501.*

Sandhill. *s.* Hillock of sand;

To the *sandhills* of the sea,
Where the earliest violets be. *Shelley.*

Sandhopper. *s.* Small crustacean of the genus *Talitrus* (*leucista*).

Among the amphipods most common on our shores are the *sandhoppers*, found under stones or under the mass of exuviae thrown up by the tide on sandy shores in troops of thousands, all active and leaping when disturbed in their retreats.—*Maudslayi, Treasury of Natural History.*

Sandiness. *s.* Attribute suggested by Sandy.

Let such pretenders suspect the *sandiness* and hollows of their foundation.—*South, Sermons, vol. 1.*

Sandiver. *s.* See extract.

That which our English glassmen call *sandiver*, and the French, of whom probably the name was borrowed, *sandiver*, is that recement that is made when the materials of glass, namely, sand and a list lizivitealkali, having been first baked together, and kept four in fusion, the mixture casts up the sky resins salt, which the workmen afterwards take off with ladles, and lay by as little worth.—*Boyle.*

Sandish. *adj.* Approaching to the nature of sand; loose; not close; not compact. *Rare.*

Plant the tenuifolius and ranunculaceus in fresh *sandish* earth, taken from under the turf.—*Ecology, Kalendar.*

Sandlaunce. *s.* British fish of the genus *Ammodytes* (lanca). The closely allied species *A. Tobianus* is commonly called Sandeel. It has, however, no connection with the true eels.

The *sand-eel* is immediately to be distinguished from the *sand-lance* by its greater size, specimens now before me measuring twelve inches in length. Ray's fish was fifteen inches and a half long; it is further distinguished by the greater length of the

head, and particularly of the lower jaw; by the commencement of the dorsal fin being on a line with the end of the pectoral fin-rays; the dorsal fin of the *sand-lance* beginning on a line with the middle of the pectoral fin, and the head smaller and shorter. . . . The *sand-eel* is browner in colour and less transparent in appearance, when in hand, than the *sand-lance*.—*Farrell, History of British Fishes.*

Sandmartin. *s.* Species of swallow so called from frequenting sandy banks and pits, where it breeds.

The *sand-martin* is the smallest in size of the species of *Hirundo* visiting this country. It makes its appearance here a little earlier than the swallow or martin; but not frequenting the habitations of men, its annual return is not so regularly or so generally noticed. Mr. Hyslop, however, has recorded that, so far north as Carlisle, this bird has in two different seasons been noticed before the end of March; and there are others.

It is having been observed in Cumberland on the 4th and on the 11th of April. Like the species already described, this little warbler comes to this country from Africa, and frequents as its resting place high banks of rivers, sand-pits, and other vertical surfaces of earth that are sufficiently soft in substance to enable the bird to perforate it to the depth necessary for its purpose. In such situations this little engineer forms circular holes in a horizontal direction, boring to the depth of two feet or more, with a degree of regularity, and an amount of labour, that is rarely excelled among birds.—*Farrell, History of British Birds.*

The *sand-martin* . . . is one of our earliest spring visitors, reaching our shores often in March. As the name indicates, sandbanks, or the banks of rivers, if easily pierced, are selected by the birds for breeding in; where, having penetrated by dint of labour, sometimes to the depth of eighteen inches, or even more, they construct a nest of dry grass, lined with feathers, upon which the eggs, four or five in number, and glossed white, are deposited.—*Linsley, Popular History of British Birds' Eggs.*

Sandnecker. *s.* British fish of the genus *Platessa* (plaice); species *P. limandoides*; sand-fluke; long fluke; long rough dab.

Sandpipe. *s.* In *Geology*. Deep pipe-like channels filled with sand or gravel found in chalk.

Sandpipes . . . have been found near Norwich penetrating upwards of sixty feet into the chalk, the larger ones being twelve feet in diameter. They all taper downward and end in a point, and even when close together, and in it chalk, the walls are not broken through. Generally the sides and bottom are lined with clay, and the central part of each pipe is full of sand and gravel. It is not easy always to see how such pipes or funnels can have been formed. Some may have commenced by the rotary motion of stones drilling holes in the chalk, but they have probably been continued by the slow action of water containing carbonic acid penetrating into holes made in this or some other accidental way, and perhaps deepened in modern times by the action of humic acid derived from the roots of trees penetrating down and afterwards decaying. It is not unfrequently the case that the course of a *sandpipe* can be traced through the gravel and sand overlying it by its effect on the vegetable soil. *Audel, in Brande and Cox, Dictionary of Science, Literature, and Art.*

Sandpiper. *s.* Native bird of the genus *Totanus*.

The common *sandpiper* is a summer visitor to this country, appearing in April, leaving us again the end of September, and is very generally known by the name of the summer snipe.—*Farrell, History of British Birds.*

Sandpride. *s.* British fish of the genus *Ammocetes* (branchialis); pride; sand-prey; mud lamprey.

It is very common in the Thames about Hampton, where it is called *sandpride*.—*Farrell, History of British Fishes.*

(See also under Pride.)

Sandshot. *s.* In *Artillery*. Balls (smaller than those cast in iron) cast in sand.

Sandsmelt. *s.* British fish of the genus *Atherina* (presbyter); atherine.

The atherine is a common fish at Brighton, where it is called the *sandsmelt*.—*Farrell, History of British Fishes.*

(See also under Smelt.)

Sandstone. *s.* Stone of a loose and friable kind, that easily crumbles into sand.

Sandstone [is] one of the three great divisions of the sedimentary rock masses, limestone and clay being the others. In *Geology*, *sandstones* belong to all geological periods, and exhibit almost infinite variety of detail, although with a degree of general resemblance not easily mistaken. . . . *Sandstones* are

presented in no regular order. Large tracts of country consist almost exclusively of such rock, and are very barren, but more usually other rocks alternate with them, and the mixture makes vegetable soil. *Sandstones* are rarely fossiliferous. They are, however, remarkable as a group maintaining a peculiar kind of fossil, namely the imprint of animals that have walked over certain beds while the mass was being accumulated and before the sea-sand had passed into the state of stone. Such footmarks have been detected chiefly in the other secondary *sandstones*, especially the new red *sandstone*; as in the neighbourhood of Liverpool and in Warwickshire in England, in some parts of Scotland, in Connecticut and other northern states of America. They have been found much more sparingly in the Palaeozoic *sandstones*. . . . *Sandstones* are valuable for building purposes. Some, especially those of which the constituent nucleus is silica, are extremely durable; others, constituted only by carbonate of lime or oxide of iron, are so rotten as not to be worth the expense of moving from the quarry. There are many intermediate qualities. . . . *Sandstones* of which the particles are coarse, are called grit, and when made up of pebbles cemented together they are termed conglomerate or pudding stone.—*Audel, in Brande and Cox, Dictionary of Science, Literature, and Art.*

Sandwich. *s.* Thin layer of meat between two slices of bread.

A toast sung staidly on a winter's night,
A look, friend, single lady, or a glass

Of claret, *sandwich*, and an appetite.

Are things which make an English evening pass.

Byron, Don Juan, v. 12.

In virtue of which liberal arrangement, they lend the happiness to find awaiting them in the parlour two emotive loaves of the remains of last night's pleasure, consisting of certain fishy bits of canines, some mummified *sandwiches*, various disrupted masses of the geological cake, and several entire captain's biscuits. That choice liquor in which to steep these dainties might not be wanting, the remains of the two bottles of currant wine had been poured together and corked with a cork-jarper; so that every material was at hand for making quite a lively night of it.—*Dickens, Martin Chuzzlewit, ch. vi.*

Sandwort. *s.* Native plant of the genus *Arenaria* (Lat. *arenaria* = sand).

Sandy. *adj.*

1. Abounding with sand; full of sand.

I should not see the *sandy* heretics run,
But I should think of milldews and of flux.

Pope, Windsor Forest.

2. Consisting of sand; unsolid.

Favour, so bottomed upon the *sandy* foundation
of personal respects only, cannot be long lived.—*Bacon, Advice to Villiers.*

Sane. *adj.* [Lat. *sanus*.] Sound; healthy. Its termination [that of delirium] is various. Even those who have a strong hereditary taint often remain perfectly sane for some years after the first attack.—*Crichton, On Mental Derangement, vol. i. p. 162.*

Sang-froid. *s.* [Fr. *sang* = blood; *froid* = cold, cool.] Coolness; freedom from agitation.

He could with the most perfect *sang-froid* look up this admirable piece in his desk, and wait with philosophic patience for a favourable season to produce it.—*Shelton, Life of Swift, § 2.*

He talks of his union, just as he does of his taxes and his savings, with as much *sang-froid* and ease, as if his wish and the enjoyment were exactly the same thing.—*Barks, Observations on a late State of the Nation.*

There he stood with such *sang-froid*, that greater could scarce be shown even by a more spectator.

Byron, Don Juan, v. 21.

The officers were not a little staggered at the coolness and *sang-froid* of Mylord Krause, he had never appeared to so much advantage; they bowed respectfully as he finished his speech.—*Murray, Northampton.*

Sanguiferous. *adj.* [Lat. *sanguifer*; *fero* = I bear; *sanguis*, -inis.] Conveying blood.

The fifth conjunction of the nerves is branched to the muscles of the face, particularly the cheeks, whose *sanguiferous* vessels it twists about.—*Derham, Physico-Theology.*

Sanitarium. *s.* Hospital or retreat for**Sanitary.** *s.* Connected with hygiene, medical police, or the general prevention of the causes of disease, especially when endemic or epidemic. Commonly preceding such words as *condition* (of a district), *officer*, *report*, and the like.

The importance of the question as to the form that certain derivatives of the root *san-* ought to take is greater now than it was a few years ago, and than it will be in another generation, when it will, probably, be settled. The great attention which all matters connected with the public health have commanded, is well known; and an adequate vocabulary has become necessary. The terms Hygiene and Hygienic, though etymologically good, and, for most points, sufficient, have never been generally recognized; their Greek origin, the presence in them of the letter *y* (with its anti-sensuous sound), and the concurrence of the two vowels (suggestive of a diphthong), have been against them. Hence, the adoption of the congeners of the Latin *san-* has been practically agreed on. Of these *sanatory* (with *sanatorium*) and *sanitary* (with *sanitarium*) have been weighed against one another; and it seems that the preference has been given to the form in *i*, and *u*, as in '*sanitary* report,' '*sanitary* missioner,' and the like.

It is good, however, to ask—1. As a matter of *etymology*, which of the two forms is right? or, if one be right, is the other necessarily wrong? 2. What, in the way of *meaning*, is the right form intended to convey? Supposing both to be right, do they mean the same?

It is premised that from the verb *sano* = I heal, the forms in *i* are impossible; and from the adjective *sanus*, the forms in *o*, are equally so. It is also added that from the verb denoting an action, and from the adjective suggestive of an attribute, identical meanings are not deducible. This should indicate the nature of the enquiry, and serve as a caution against overhasty criticism.

The verb is treated first. From the verb we get the passive participle *sanatus* = healed, or the object healed. The *-at-* which is found in this participle, is the *-at-* in *sanator* = the object (person) that heals, i.e. the agent in the action; the action itself, or its result, being *sanatio* = healing. An assembly of *healers*, of persons healed, or for the object of healing, is a *sanat-*

orium, connected wherewith is *sanatorium*. That all these words exist in Latin, as derivatives from the word *sano*, is not the fact; all that is asserted is that this is a series of possible derivatives from the verb; and that if the verb *sano* fail to give us all of them, other verbs of the same character will make up the deficiencies. And they will not give us forms in *i*.

To heal is to make sound; but the notion of making is not conveyed by the adjective *sanus*; which means simply sound, healthy, without any reference to previous ailments or previous cures. It would scarcely be going too far to say that it means natural good health. The abstract substantive suggested by this is *sanitas*; and the secondary adjective *sanitorius* = connecting with relating to, constituted by good health; the notion of healing, or previous bad health, relieved by *sanatory* treatment being in abeyance. What follows from this is plain. *Sanatory* coincides with *Therapeutic* rather than *Hygienic*, *Sanitary* with *Hygienic*, rather than *Therapeutic*. The former recognizes disease, as a thing to be annihilated; the latter either overlooks it, or, recognizing it, recognizes it only as a thing to be prevented.

The two terms, however, are so closely allied in meaning that the recognition of the distinction is not likely to become general. Hence, one of the two words will prevail. Of these, the present form (in *i*) is the likelier.

Sáturnal. *s.* Feast of Saturn in ancient Rome, when the slaves, who for the time were supposed to change place with their masters, created a week of misrule.

A people denied the freedom of speech or of writing, have usually left some memorials of the times in that silent language which addresses itself to the eye. . . . But we possess a secret history of the *Sáturnal*, it would doubtless have afforded some materials for the present article. In those revels a venerable radicalism, when the senate was chosen, and the pikes, or cap of liberty, was triumphantly worn, all things assumed an appearance contrary to what they were; and human nature, as well as human laws, might be said to have been paralysed. . . . A period so glorious for exhibiting the suppressed sentiments of the populace, as were these *Sáturnalia*, had been nearly lost for us, had not some notions been preserved by Lucian; for we glean but sparingly from the solemn pages of the historian, except in the remarkable instance which Saturninus has preserved of the archaism which followed the body of the Emperor Vespasian at his funeral.—*J. Horne*, *Chronicles of Literature*, *Repression of Suppressed Opinion*.

The truth is, that the "crisis" was taking a favourable turn; and after various "strikes," "riots," "tumults," and other phagocytosis of the *Sáturnal* of labour, things were settling down into the old state. . . . the "difficulty" called "condition of England" was about to be postponed for another period of years.—*Hanning*, *High-toned Pantomime*, b. i. ch. ix.

Scott*, *Portents of Night*, ch. xiii.

Sátyr. *s.* [Lat. *satyrus*.] Goat-footed wood-deity of the classical mythology.

Sátyræ, as Pline testifies, were found in times past in the eastern mountains of India.—*Pearson*, *On Dying*.

The classical fiction of the *sátyræ* . . . was revived among the northern people, and, perhaps, transferred by them to the Celtic tribes. . . . The Scottish Gael have an idea of the same kind respecting a golden called *Oenis*, whose form is like that of Pan and his attendants, something between a man and a goat, the latter extremities being in the latter form. A species of cavern, or rather hole, in the rock, affords to the wildest retreat in the romantic neighbourhood of Loch Katrine, a name taken from classical superstition. It is not the least curious circumstance, that from this sylvan deity the ancient nations of Europe have borrowed the degrading and unsuitable emblem of the goat's visage and form, the horns, hoofs, and tail, with which they have depicted the author of evil, when it pleased him to show himself on earth. So that the alteration of a single word, would render Pope's well-known line more truly adapted to the fact, should we venture to read,

*And Pan to Satan lends his heathen horn.

We cannot attribute the transference of the attributes of the northern *sátyræ*, or Celtic *Oenis*, to the arch-fiend, to any particular resemblance between the character of these deities and that of Satan. On the contrary, the *Oenis* of the Celts was a creature by no means peculiarly unbecomingly or fearfully powerful; but rather a melancholy spirit, which dwelt in wilderness far removed from men.—*Sir W. Scott*, *Lectures on Demonology and Witchcraft*, vol. i. letter iii.

Sátyrasias. *s.* [Lat.; Gr.] *Sátyr*-like lasciviousness.

There is reason to doubt that the Greeks and Romans were acquainted with this disease, and the doubt applies equally to the Arabians, at which a few passages in *Rhazes* might support the idea that *scarlatina* was confounded by the Arabian writers with measles. The first writer who distinguished the disease is stated by Hildenbrand and J. Frank to have been Ingrassias, who remarks that before the period at which he wrote it was called *Rossella* or *Rossania*, from *Rossa*, red; ... although it was generally considered as the same with measles yet he was convinced, by his own observations, that the one was different from the other. — *Capit. That for his lyre's theme, when the fair whole
Is broken into ample parts, and told;
Where to the eye three well-mark'd distances
Spread their peculiar colouring; vivid green,
Warm brown, and black opaque, the foreground
bears

Conspicuous; sallow olive eddly marks
The second distance; thence the third declines
In softer line, or, lessening still, is lost
In faintest purple. When thy taste is cold
To deck a *scene* where Nature self presents
All these distinct gradations, then rejoice
As does the painter, and like him apply
Thy colours; plant thou on each separate part
Its proper foliage. — *Milton, English Garden*, l. 184.

Whenever a man stands, the religious object is immediately before him form a foreground &c. the *scene* he is looking at; and by the foreground how much the general prospect is collected, there are few who delight in landscape that have not perceived. How then stand art, thus limited in the extent of her dominion, attempt to harmonize the whole *scene*? If then it appears that fancy be of such power as thus to give charms to reluctant nature, it follows that we should exert ourselves to improve this faculty; and to this extent it is laid down as a maxim that we should consult the laws by which painting is governed, and apply them to the sister art of gardening. But of these, the first is to make a happy selection of objects for the pencil; and therefore, as greatness of parts, a repeating gradation of hues and limiting outlines, and three distances, marked each with their respective characters, and bearing to each other a due proportion, are the objects of the painter's choice, so, if they can be attained, they are recommended to the gardener as the most desirable scenery for the exercise of his imagination and his art. —*Cowenbury (viz W. B. Bury) on Mason's English Garden, i. 179.*

It is evident that the school of Oxford was frequented under Edward the Confessor. . . . In the reign of Henry II., or at least of Richard I., Oxford became a very flourishing university, and in 1201, according to Wood, contained three thousand scholars. The earliest charters were granted by John. . . . At Oxford, under Henry III., it is said that there were thirty thousand scholars; an exaggeration which seems to imply that the real number was very great. — *Hallam, View of the State of Europe during the Middle Ages*, pt. ii, ch. ix.

A scholar, sir, at least one like me — is of all persons the most unfit to teach young children. Both sides charge the other with idolatry, and that is a matter of consequence, and not a scholastic nicety. — *Bishop Stillingfleet*.

As early as the reign of Stephen, Vacarius, a lawyer of Bologna, taught at Oxford with great success; but the students of scholastic then opposed themselves, from some unexplained reason, to new jurisprudence, and his lectures were interrupted. . . . The older professors of Roman jurisprudence were inferior, as we are told, with the faults and ignorance of their time; failing in the exposition of ancient law through ignorance of manuscripts and want of subsidiary learning, or perverting their sense through the verbal subtleties of scholastic philosophy. . . . A large proportion of scholars, in

most of these institutions, were drawn by the love of science from foreign countries. The chief universities had their own particular departments of excellence. Paris was universal for scholastic theology; Bologna and Orleans, and afterwards Bourges, for jurisprudence; Montpellier for medicine. . . . But the chief attraction to the students was the new scholastic philosophy. The love of contention, especially with such arms as the art of dialectics supplies to an acute understanding, is natural enough to mankind. . . . In the next century Abelard and Peter Lombard, especially the latter, completed the scholastic system of philosophising. The logic of Aristotle seems to have been partly known in the eleventh century, although that of Augustin was, perhaps, in higher estimation. . . . In the twelfth, it obtained more decisive influence. . . . Those who assert the greatest antiquity of the Roman Catholic doctrine as to the real presence, allow that both the word and the definition of transubstantiation are owing to the scholastic writers. . . . The Aristotelian philosophy, even in the hands of the Master, was like a barren tree, that reveals its want of fruit by profusion of leaves. But the scholastic ontology was much worse. What could be more trifling than disquisitions about the nature of angels, their modes of operation, their means of transiure, or (for these were distinguished) the morning and evening state of their understanding? — *Hallam, View of the State of Europe during the Middle Ages*, pt. ii, ch. ix.

Scholastic. s. One who adheres to the niceties or method of the schools and schoolmen.

The shallow commenting of scholastics and canonists. — *Milton, Doctrine and Discipline of Divorce*, preface.

For, very few, for a hundred years past, have broken the repose of the immense works of the schoolmen. None, perhaps, in our own country, have acquainted themselves particularly with their contents. Leibnitz, however, expressed a wish that some one conversant with modern philosophy would undertake to extract the scattered particles of gold which may be hidden in their abandoned mines. . . . But all discovery of truth by means of these contrivances was rendered hopeless by two insurmountable obstacles, the authority of Aristotle, and that of the church. . . . The scholastics did not understand Aristotle, whose original writings they could not read, but his name was received with implicit faith. They learned his peculiar nomenclature, and fancied that he had given them realities. The authority of the church did them still more harm. It has been said, and probably with much truth, that their metaphysics were injuries to their theology. Perhaps I may have imagined the scholastics to be more ignorant than they really are. Within a short time, I have met with four living English writers who have read parts of Thomas Aquinas — Mr. Turner, Mr. Berington, Mr. Coleridge, and the Edinburgh Reviewer. Still I cannot bring myself to think, that there are far more in this country who could say the same. — *Hallam, View of the State of Europe during the Middle Ages*, pt. ii, ch. ix. and note.

The talents of Abelard were not confined to theology, jurisprudence, philosophy, and the thorny paths of scholasticism: he gave proofs of a lively genius, by many poetical performances. — *J. Warton, Essay on the Writings and Genius of Pope*.

It may be said of scholasticism, as a whole, that whoever takes delight in what may be called gymnastic exercises of the reason or the reasoning powers, excesses which never had, and hardly cared to have, any bearing on the life, or even on the sentiments and opinions of mankind, may study these works, the crowning effort of Latin, of medieval, and monastic Christianity, and may acquire something like respect for these forgotten athletes in the intellectual games of antiquity. — *Milman, History of Latin Christianity*, b. xiv, ch. iii.

Scholast. s. [Gr. *σχολαστικός*.] Writer of explanatory notes.

Albeit that words is wanting in the Greek text, yet either that, or some other of the like force, must necessarily be understood, as the Greek scholast and other writers do well note. — *A Fruitful Sermon*, p. 55: 1281.

2. Place of literary education; university.

My mind being private, I have not expressed my conception in the language of this *school*.—*Sir K. Digby*.

Writers on that subject have turned it into a composition of hard words, tritles, and subtilties, for the mere use of the *schools*, and that only to amuse men with empty sounds.—*Watts*.

The establishment of public *schools* in France is owing to Charlemagne. At his accession, we are assured that no means of education existed in his dominions; and in order to restore in some degree the spirit of letters, he was compelled to invite strangers from countries where learning was not so thoroughly extinguished. Alcuin of Elnbach, a learned man of Ireland, Theodulf of Germany, were the first Paladins who repaired to his court. With the help of these he received a few sparks of civilization, and established *schools* in different cities of his empire, nor was he admitted to be the disciple of that in his own palace under the care of Alcuin. Had two next successors, Louis the Debonair, and Charles the Bald, were also encouragers of letters; and the *schools* of Lyons, Friburg, Corvey, Rheims, and some other cities might be said to flourish in the ninth century.—*Hutton, View of the State of Europe during the Middle Ages*, pt. ii. ch. ix.

About the latter part of the eleventh century, a greater ardour for intellectual pursuits began to show itself in Europe, which in the twelfth broke out into a flame. This was manifested in the numbers who repaired to the public universities, or *schools* of philosophy. None of these grew so early into reputation as that of Paris. This cannot indeed, as has been vainly pretended, trace its pedigree to Charlemagne. The first who is said to have read lectures at Paris was Remigius of Auxerre about the year 900. For the two next centuries the history of this *school* is very obscure; and it would be hard to prove an unbroken continuity, or at least a dependence and connexion of the professors.—*ibid.*, pt. ii. ch. ix.

6. Age of the church and form of theology succeeding that of the fathers; so called, because this mode of treating religion arose from the use of academical disputations: (used *adjectivally*).

A man may find an infinite number of propositions in books of metaphysics, *school* divinity, and natural philosophy, and know as little of God, spirits, or bodies as he did before. *Locke*.

Swift.

Used *adjectivally*.

He never read a book in his life, and, with his

pumpie, old, gouty fingers still writes a *schoolboy*

hand. —*Thackeray, Book of Snobs*, ch. ix.

What better estrangements and what melting reconciliations; what scenes of wild re-creation, melting explanations, passionate correspondence; what intense sensitiveness, and what frantic sensuality; what earthquakes of the heart and whirlwinds of the soul are confined in that simple phrase — a *schoolboy's* friendship! It sends forth shrill and piercing cries, which may be heard at a considerable distance, who see its English name. Bajan tells us, that its aliment consists only in aquatic plants and weeds, though others before him have asserted that it also fed on reptiles. It never attacks other birds, and the only use it makes of its arms is, when the males dispute for the possession of the females. Once paired, however, the two sexes quit each other no more; and when one dies the other soon joins away with grief. — *Translation of Cuvier's Règne Animal*.

entrance doors; the approach to the body of the
hall being by one or more doorways through the
screen. This was of wood, with the lower part to

and the upper part of open-work. In churches
screens were used in various situations, to enclose

The Whites soon had an opportunity of retaliating. They triumphantly related that a scrivener in the borough, a staunch friend of hereditary right, while exulting in the judgement which had overtaken the queen, had himself fallen down dead in a fit. — *Maccarty, History of England*, ch. 22.

2. One whose business is to place money at interest.

How happy in his low degree,
Who lends a quiet country life,
And from the gaping scrivener free!

Depue, Translation from Horace, epode ii.

I am reduced to beg and borrow from scrivener and usurers, that suck the heart and blood. — *Arbuthnot, History of John Bull*.

Scriveners are mentioned in the statute against usury and excessive interest of money. Money scriveners were understood to be those who received money to place out at interest, and who supplied those who wanted to raise money on security; thus rendering themselves useful to, and receiving a profit from, both parties. If a scrivener is entrusted with a bond, he may receive the interest; and if he fails, the obligee shall bear the loss; and so it is if he receives the principal, and deliver up the bond; for being entrusted with the security itself, it shall be presumed he is trusted with power to receive the principal and interest; and the giving up the bond on payment of the money is a discharge thereof. — *Toulmin, Law Dictionary*.

Serofula. *s.* [? see last extract.] In *Medicine*. Tubercular disease. See *Tubercle*.

If matter in the milk disposes to concretion, it produces a serofula. — *Wise, Surgery*.

Serofula [is] constitutional asthma; a weak or atonic development of the frame, with a labile state of the soft solids and preponderance of cellular and lymphatic reformation; and a disposition to, or the presence of, swellings of the lymphatic glands, of disorder of the mucous surfaces, and of deposits, in various organs or parts, of small masses, varying in size, consisting of a firm, friable, plastic substance resembling cheese, and denominated tubercles. From the synonyms enumerated above, it may be inferred that the term serofulous dialyses, or rachyis, or vice; serofulous, or constitution, tuberculous rachyis, or evil; tuberculous serofulous may be considered as nearly synonymous. — *Copland, Dictionary of Practical Medicine*.

Serofula . . . was termed by the Greeks as *apoplex*, swollen or indurated glands of the neck, to which it was said that the put (pus) is especially subject. Hence the Latin term *serofula* has been traced to serola, a sow; but the origin is in either case very dubious, the Greek word being *skan*, perhaps, to *apoplex*, hard, and the Latin to *serpens* and *ripes*, a stone or pebble. It is now regarded as the result of a general disorder to which the name tuberculosis is given. The ideal is diseased, and according to the age of the patient different organs are liable to become attacked by tubercular deposit. In early infancy this deposit gives rise to water on the brain. In early manhood pulmonary consumption is the result, while in the intermediate period of life we find mesenteric disease, a scurvy. The popular use of the word *serofula* consists more especially in its application to tubercular disease in children. — *Brande and Cox, Dictionary of Science, Literature and Art*.

Serofulous. *adj.* Diseased with, having the character of, serofula.

Serofulous persons can never be duly nourished; for such as have tumours in the parotids often have them in the pancreas and mesentery. — *Arbuthnot, On the Nature and Choice of Aliments*.

English constitutions generally proceed from a serofulous disposition. — *Id.*

What would become of this race of men in the next age, if we had nothing to rest to beside the serofulous consumptive production furnished by our men of wit and pleasure? — *Swift*.

In a state of civilization so little advanced as that
of the Anglo-Saxons, and under circumstances of
such incessant peril, the fortunes of a nation chiefly
depend upon the wisdom and valour of its sove-
reign. No free people, therefore, would intrust
their safety to blind chance, and permit an unwise
observance of hereditary succession to prevail against
strong public expediency. Accordingly the Saxons,
like most other European nations, while they li-
mited the inheritance of the crown exclusively to
one royal family, were not very *scrupulous* about its
devolution upon the nearest heir. *—Hallam, View of
the State of Europe during the Middle Ages, pt. i.
ch. viii.*

money to pay for a *scurvy* dinner. In the course of
salon, they are discovered to be eight mu-
narchs in Europe, who had been deprived of their
crowns!—*I. Disraeli, Curiosities of Literature, De-
scribed Monarchs.*

"Ho, Diomed, well met! Do you sup with Glaucus

they say his suppers are the best in Pompeii."—*Lord
Lytton, The Last Days of Pompeii, b. l. ch. l.*

Scurvy. *s.* [Lat. *scurbutus*.] Well-known
disease to which seamen were far more
liable than they are now; consisting in
a degeneration of blood, and generally
arising from the want of fresh provision;
purpura. See extracts.

Lemon-juice is really a specific against *scurvy*,
whether it be employed as a preventive or as a
remedy. It supplies something to the blood which
is essential to its healthy properties. Its virtues
were known in this country more than two hundred
years ago, as appears from the weak entitled "The
Scurvy's Mate, or Military and Domestic Medicine,"
by John Woodall, Master in Surgery. London, 1616;
and the merit in making the fact generally known,
and of procuring the systematic introduction of
lemon-juice into nautical diet, by an order from H.
Admiralty, is due to Dr. Blair and Sir Gilbert Blane,
in their capacity of Commissioners of the Board for
Sick and Wounded Seamen in 1755. "The effect
(says Sir John Herschel) of this very measure may
be estimated from the following facts. In 1780, the
number of cases of *scurvy* received into Haslar
Hospital was 1,677; in 1796 not only; and in 1797
one." He adds, "There are now many surgeons in
the navy who have never seen the disease."—*Sir P.
Wolman, Lectures on the Principles and Practice of
Physic, lect. 30.*

Of the symptoms of *scurvy* the earliest are ob-
served in the countenance. The face as well as the
rest of the surface, is pale and bloated. The car-
nuncle of the eyes and lips have a dirty or greenish
hue. The expression of the features is depressed,
the gums are swollen, spongy, soft, livid, and bleed
on the slightest friction. The colour of the breath
is offensive. The skin is dry and harsh, and it
generally continues dry through the course of the
malady. Sometimes it is parched, resembling the
goose-skin appearance; but it is more frequently
shining and wet. . . . streaks, or spots of a reddish-
brown, bluish, greenish, black or livid hue, resem-
bling those following a severe louse. The size of
these patches varies from a small point to that of a
hand-breadth; and it generally increases with the
progress of the malady. The patches are first ob-
served, and are most numerous, on the legs and
thighs; but they soon appear on the arms and
trunk, and on the scalp; very rarely on the face,
which, however, assumes a more dusky and bloated
hue. The ankles swell and the legs and feet become
oedematous. *Caplan, Dictionary of Practical Me-
dicine.*

Scurvygrass. *s.* Plant of the genus *Coch-
learia* (edimundia), supposed to be useful as
a remedy in scurvy.

Some *scurvygrass* do bring,
That inwardly applied is a wondrous sovereign
thing. *Dryden, Polydora, song xviii.*
Scurvygrass cresses, when rubbed, a somewhat
pungent odour. Its taste is penetrating and acrid,
(It is) a gentle stimulant, aperient, and diuretic.
It has long been esteemed as an antiscorbutic. It
has also been used in several obstructions. It is
occasionally eaten with bread and butter like water-
cress. *Price, Elements of Materia Medica and
Therapeutics, 1823.*

The common *scurvygrass* is cultivated in gardens
for its leaves. It flourishes best in a sandy soil, but
will succeed in almost any other, especially if

abounding in moisture. The situation must always
be as open as possible. It is propagated by seed,
which should be sown as it is ripe in July or June,
for if kept from the ground until the spring, they
will entirely lose their vegetative power, or produce
plants weak and unproductive. The sowing is per-
formed in drills eight inches apart, and half an inch
deep.—*Johann, Encyclopedia of Agriculture.*

Scuse. *s.* Excuse.
I shifted him away.
And laid good *scuse* upon your credence. *Shakespeare, Othello, iv. 1.*

Browne, Vulgar Errors.*

He fled in earth; but first it cost him dear,
He left his *scut* behind, and half an ear. *Swift.*

Scutage. *s.* [Low Lat. *scutagium*.] Escu-
age; the one being formed from the Latin,
the other from the French.

Scutch. *v. a.* Prepare flax by benting.

We may in general estimate that a hundred
pounds of the stalks of retted flax, taken in the dry
state, afford from forty-five to forty-eight pounds of
broken flax, of which, in the swimming or *scutching*,
about twenty pounds of flax, with nine or ten pounds
of *scutch* tow, are obtained. The rest is louse-waste.
The breaking of a hundred pounds of stalks requires
in the ordinary routine of a double process by hand,
about twenty hours, and with the above described
machine, from seventeen to eighteen hours. To
scutch a hundred pounds of broken flax clean, a
hundred and thirty hours of labour are required by
the German swimming method.—*Cree, Dictionary of
Arts, Manufactures, and Mines.*

Scutcheon. *s.* Escutcheon.

And thereto lend she that *scutcheon* of her desires,
supported by certain badly diligent waiters.—*Sir
P. Sidney.*

Honour is a mere *scutcheon*.—*Id., Henry IV.,
Part I. v. 1.*

With orient pearls and jewels powdered o'er. *Dryden, The Rival Rivals, and the Last, 236.*

What further or better belief can be said to exist
in these twelve hundred? Belief in high plumed
hats of a feudal cut; in heraldic *scutcheons*; in the
divine right of kings, in the divine right of pamp-
destroyers.—*Carlyle, French Revolution, pt. l. b. iv.
ch. iv.*

Scuttledish. *s.* Corruption of Cuttlefish.

There are some persons made so by nature, that
they are slow, dark, gloomy, joyless, puzzling, and
perplexing; and they pass for the wise, prudent,
guarded men of the world; they may attack error,
but seldom and not truth by themselves; like the
scuttledish they spit out their own black humor on
the pellucid element.—*Cheyne, On Regimen, preface.
(Ord M.)*

Seythe. *s.* Sithe.

He that in summer, in extremest heat
Scathed all day, in his own scathing sweat,
Shaven with keen *seythe* the glory and delight
Of motley meadows, catcheth yet at night,

And in the arms of his dear phœr forgone
All former troubles and all former woe.

Sylvestre, Translation of Du Bartas.
I was only put to it for a scythe or sickle to cut it
down; and all I could do was to make one as well
as I could, out of one of the brand-swords, or cut-
lasses, which I saved among the rubbish of the ship.

An ancient town was seated on the sea—
A Tyrian colony—the pride made
Stout for the war, and staidness of their trade.

High on the stern the Thracian raised his strain,
While Argos' stern her kindred trees

brethren. *Matthew, iv. 18.*

was half seas over before the land was out.

Spektator.

At sea, all at sea. In a vague, uncertain
condition.

The combinations wherein this word
enters as an initial element are numerous;
and so are the true compounds. It is, how-
ever, in many cases, difficult to say to which
class the word belongs; nor is it always
safe, even when the metre seems to deter-
mine the point, to take the authority of
the writer. The best rule is to follow the
analogy of such other compounds as agree
in the second element; but this is often at
variance with practice.

Many are terms in Natural History;
and here, as a rule, the combination gives
two words rather than a genuine comp. and.
The difference seems to be regulated by
the extent to which the object of which the
second element is the name is marine, or
other than marine; yet, at the same time,
sufficiently like something that is marine to
suggest a comparison. And this difference
agrees to a great extent with the generic or
specific character of the term. Thus, of
birds, or *vervils*, some may belong as truly
to the sea as to the land; and when we use
a compound to say whether a land-bird or
a sea-bird be meant, the distinguishing
prefix takes an accent, for the distinction
it indicates is real, giving *seabirds* and
seawords, to which *land-birds* and *land-*

words may be opposed. With *cows*, *cats*,
&c., however, the second name is spec-
ifically that of a land animal, and no
real division into *land cows* or *land cats*
exists. Roughly speaking, then, the possi-
bility of a real contrast between the two
parts of a class carries us far in the fixation
of the accent. But not all the way. When
the word exceeds two syllables the ten-
dency to place the accent nearer the end
complicates our criticism. So does the
extent to which the word is in common
use. So do certain accidents; e.g. we say
seagull not *scá-gull*. Yet there are (in the
common acceptance of the name) no *land*
gulls. The bird, however, probably took
its name in the inland districts where it
was noticed as coming from the sea. This
principle of contrast gives us, also, *seafish*
as opposed to *freshwater fish*. What ap-
plies in this respect to the combinations
beginning with *sea*, applies also to those
beginning with *seater*. When the object
is wholly or mainly marine, no prefix is
needed. It is, however, sometimes used as
an expletive, e.g. *sea-sea*. In this case
there is a pair of words. This applies to
what has been said about *seagull*. The
name would never occur to a sea-side
resident unless there were other gulls in his
neighbourhood.

Of the forthcoming entries many will
be unaccompanied by any extract. Gene-
rally, when this is the case, the word is
found in the synonymy rather than in the
text of the author from whom it is taken;
or else an illustrative extract is to be found
under one of the equivalent names.

Sea-icorn. s. Barnacle (i.e. the Cirrhopod
so called).

The Island (Barnacles) have also been named
sea-icorns, from some sort of resemblance to
the front of the cake. *Translation of Curier's Regne*
Animal.

fish, akin to the sticklebacks, of the genus
Gasterosteus (spinachia); fifteen-spined
stickleback; bismore.

Sea-anémone. s. Radiate animal of the
genus *Actinia*.

[The fleshy body [of the Actiniae] often adorned
with lively colours, developing numerous tentacula,
placed round the mouth on several ranges, like the
petals of a double flower, has occasioned the name
of *sea-anémone* to be bestowed upon them.—*Trans-*
lation of Curier's Regne Animal.

Sea-ape. s. Sea-fox.

Sea-bank. s.

1. Sea shore.

I was, the other day, talking on the sea-bank with
certain Yeoman. *Shakespeare, Othello, iv. 1.*

2. Fence to keep the sea within bounds.

Sea-bat. s. Flying-fish.

Sea-bear. s. Name given to certain seals;
also applied to the white bear.

Sea-beast. s. Large or monstrous animal of
the sea.

Leviathan, which (said of all his works
Created hugest that swim the ocean stream.
Milton, Paradise Lost, l. 200.

Sea-calf. s. Name given to the common
seal, or Phœn vitulina; sea-dog.

The *seacalf*, or seal, is so called from the noise he
makes like a calf; his head comparatively not big,
shaped rather like an otter's, with teeth like a dog's,
and mustaches like those of a cat; his body long,
and all over hairy; his forefeet with fingers clawed,
but not divided, yet fit for swimming; his hinder feet,
more properly fins, and fitted for swimming, as being
an amphibious animal. The female gives suck, as
the porpoise and other viviparous fishes. *—Grew,*
Microsc.

Sea-cat. s. Name applied to two British
fishes.

1. Genus *Trachinus* (draco); great Weever;

Of his bones are coral made;
Those are pearls that were his eyes;
Nothing of him that doth fade,
But doth suffer a sea-change.
Shakspeare, Tempest, l. 2, song.

Sea-cow. s. Manatee. See *Sirenia*.

The *seacow* is of the cetacean kind. It grows to
fifteen feet long, and to seven or eight in circum-
ference; its head is like that of a hog, but longer,
and more cylindrical; its eyes are small, and it has
no external ears, but only two little apertures. Its
lips are thick, and it has two long tusks standing
out. It has two fins, which stand forward on the
breast like hands, whence the Spaniards called it
manatee. The female has two round breasts placed
between the pectoral fins. The skin is very thick
and hard, and not scaly, but hairy. *—Sir J. Hall,*
Materia Medica.

Sea-cucumber. s. Member of a group of
radiate animals, akin to the star-fishes, &c.,
so called from their shape. See *extract*.

The *sea-cucumber* are the most typical of the
Holothuridae, and their popular name is very ex-
pressive of their usual form. They have all the
power of changing their shapes in the strangest
manner, sometimes elongating themselves like
worms, sometimes contracting the middle of their
bodies so as to give themselves an hour-glass shape,
sometimes blowing themselves up with water so as
to be perfectly globular. . . . The great *sea-cucumber*
is the largest of all the known European species,
and probably one of the largest cucumbers in the
world, measuring when at rest fully one foot,
and capable of extending itself to the length of three.
He is the king of the *sea-cucumbers*, and seems to
have gathered the greater number of his subjects
around him in the Shetland seas. . . . The Shet-
landers designate him by the name of *sea-pudding*.
. . . The long *sea-cucumber* (*Cucumaria fishermans*) is
in proportion to its thickness, the longest of all the
British *sea-cucumbers*. It is a small species, measur-
ing about an inch in length. It is rounded, and tapers
slightly towards each extremity. The pinkish white
skin is covered with plumose papillae, and the five
rows of suckers are not prominent. The suckers
are doubly rounded, and alternate in each row,
generally about thirty. The tentacula are ten, short,
somewhat triangular, white, and rounded to their
bases. It is a sluggish animal, and not fond of
clamorous form. We dredged several specimens in
the Shetland seas during the summer of 1850. . . .
The class *sea-cucumber* is a most beautiful and de-
licate animal, being almost transparent and of an
opaline hue. It was discovered by Dr. Fleming
in the Shetland seas, and was referred by Mr. Gould-
sir and myself when dredging near Lerwick in
1850. In both cases it was referred to the Hol-
othuria pellucida of Muller, which is doubtless a
nearly allied species, but differs from our animal
in being quite smooth. The smoothness and trans-
parency of the surface of the *sea-cucumber* is of great
importance as a source of specific character in the
genus, being very constant. When at rest the glassy
sea-cucumber is of a fusiform shape, and attenuated
at each extremity. The tentacula are large, pumi-
culate, and pinnate at their extremities. The
suckers are placed in two close rows in each avenue.
The specimen taken by us was two inches and a
half in length. Dr. Fleming says it attains the
length of six inches. *—Forbes, British Starfishes.*

[*Cedrus papillata*] is called king of the *sea-eggs*,
and that it is found in the 'farthest heath,' the term
applied to the deep-sea fishing in deep water. *—*
Forbes, British Starfishes, p. 148.

Sea-elephant. s. Species of seal, so called
from the proboscis-like character of its
snout; elephant seal.

It is not from [its trunk] alone that it has ac-
quired the name of the *sea-elephant*, but also because
it is by much the largest of its kind, in this respect
more than doubling the dimensions of its terrestrial

snake, reaching the enormous length of twenty-five and thirty feet, maintaining a prodigious thickness. — *R. Hamilton, in Naturalist's Library.*

(See, also, under Sea-Serpent.)

Sea-girkin. *s.* Member of a group of radiate animals akin to the Sea-cucumber. See extract.

The animals to which we have applied the name of *sea-girkin* differ from the Cucumaria, externally, in the very few suckers which crown their apices; and internally, in having a strong muscular sizerd. In their motions they differ also very considerably, not constricting themselves, and blowing themselves up as the sea-cucumbers do, but elongating themselves like worms, to which animals they approximate in their movements. Their suckers are exceedingly strong, and always exerted, few in number, and appearing as if ranged in a single line. Two species, both of which seem to have escaped observations of British naturalists till lately, are found in our seas. The first, that before us, appears to be among the most abundant and extensively distributed of all the British Holothuriadae. The Geni are slumbersome. The brown *sea-girkin* is about three-fourths of an inch in length, and sometimes longer. A second species of *sea-girkin* was found by Mr. Goodair and myself in the Sound of Bressay, Shetland, at the same time with the various sea-cucumbers which we have described from that quarter. *Forbes, British Starfishes.*

Sea-hare. *s.* Radiate animal, of the genus *Aplysia*.

Pliny and Dioscorides speak of a species of this genus under the name of *sea-hare*, and depict it as a venomous animal, which not only should not be touched, but not even looked at. Following them, Rondelet has spoken in the same manner. The *Aplysia* are supposed to possess the property of causing the hairs to fall from those parts of the body to which they are applied, and of causing strangury to those who are so foolish as to swallow a little of the mucus which flows from their bodies. But M. Cuvier has proved this opinion to be erroneous, at least, as far as the first of these properties is concerned. But they exhibit an colour so nauseous and foetid, that one would be more disposed to avoid than approach them. — *Translation of Cuvier's Règne Animal.*

Sea-heath. *s.* Native plants of the genus *Frankenia* (lavis, pulverulenta).

I had just time, in a moment of desperation, to throw myself into the cave upon the back of the *sea-horse*, when the two enormous bodies of ice came in contact. I found myself pent up in an apartment eight feet square, in company with a *sea-horse*. ... During the first month the calls of hunger obliged me to make frequent attacks upon the carcass of the *sea-horse*; after that, my appetite decreased, until at length I went not touch a mouthful of food in a week. — *Maryat, Fables of many Tales.*

Sea-lion. *s.* Seal so called.

We turn first to the animals which have received the popular name of *sea-lion*, a name which has been applied by voyagers to seals of large dimensions for a variety of fanciful and absurd reasons. Thus Tinnell, in his narrative of that voyage, which goes under the name of *Bamper's*, applies the appellation to a great seal he encountered, because 'he roared like a lion'; and others conferred it upon other animals, because they had teeth like lion's teeth, and so forth. Steller, who, in 1772, first gave a detailed account of some of these larger seals, described one under the name of *Bamper's sea-lion*; but, in looking to Tinnell's account, it is evident that no one could thereby diminish the species; and, from other considerations, it is almost certain it had reference to the proboscis seal just described, which, as we have seen, was called *sea-lion* by Anson, and *sea-wolf* by Peron. But this is the least of our present confusion. Peron gives an account of a *sea-lion* which he encountered at the Falkland Islands; and Forster, in his account of Cook's Voyage, supplies another of a somewhat similar animal, which they met with at Staten's Island. From the general resemblance merely, Peron regarded the great lion of the Falkland Islands as identical with Steller's; at the same time remarking that there were several species of *sea-lion*; and Forster was disposed to identify the species he saw both with Steller's and Peron's; whilst Peron and other naturalists, who have paid great attention to these amphibia, strongly contend that there are three or more different kinds. — *R. Hamilton, in Naturalist's Library, Amphibious Carnivora.*

general, more or less of white hairs. The hinder legs, in particular, are very short, and placed nearer the anus than in quadrupeds in general; which assimilation to the seal, to which it bears a considerable general affinity; it sometimes weighs as much as seventy or even eighty pounds. It is found, perhaps exclusively, in the northern parts of the Pacific Ocean, where the Asiatic and American continents nearly approach each other, and in the intervening islands. It is said that a single skin is sometimes sold in the Chinese and Japanese markets for upwards of twenty pounds sterling. — *Translation of Cuvier's Règne Animal.*

Sea-sérent. *s.* [See Sea-snake.]

1. False. See extract.

[The word *sea-sérent*, with the common prefix *Great*, represents the idea of a surface-swimming, air-breathing marine animal, of a snake-like shape and undulatory motion, variously reported by alleged eye-witnesses as being from 100 to 600 feet in length; and, by most, as having a name. ... Many and divers are the phenomena at sea which recall the pre-conceived notion of the great *sea-sérent*; and, viewed in that frame of mind, a distance too great for accurate observation, leave a conviction of the marvel which is testified to in good faith. Whenever the monster has been closely approached or captured, it has turned out to be other than was supposed. Captain Sir James C. Ross, in his antarctic voyage, ordered out a boat to approach and if possible kill and capture what seemed to him, his officers, and crew, to be a veritable *sea-sérent*. It proved to be the great *sea-éléphant*, *Phoca* (*Cystophora*) *proboscidea*, nearly thirty feet in length, but leaving a strong wake of more than twice that length through the powerful action of the tail-propeller. In other instances, the supposed *sea-sérent* has proved to be a succession of grampus or porpoises leaping in line, one after another, and deceiving the eye as a continuous undulatory body,

when first seen at a distance; or it has been found to be a log or spar covered with barnacles and seaweed, which, lifted by the waves and falling, represented the mane of the preconceived monster. — *Owen, in Brand and Cox, Dictionary of Science, Literature, and Art.*

2. True. See extract.

Nevertheless, sea-serpents do exist; they even abound in some localities in the tropics; they belong to the genus *Hydros* or *Hydrophis*, and are distinguished from land serpents by their compressed tail, which thus becomes a swimming organ. An island salt and bare,
The haunt of seals, and orcas, and seaweeds clang.

Milton, Paradise Lost, xi. 181.
The seals, although smaller in size, are much more varied in form and species than the others. The head, observes M. Cuvier, resembles that of a dog, and they likewise possess the kind and intelligent expression of countenance peculiar to that animal. They are, in fact, easily tamed, and soon become attached to those who feed them. They live entirely upon fish, which they devour in the water: when diving, they can close the nostrils, by means of a particular valve. The common species is typical of the group. The zoological characters of the seals are chiefly drawn from their teeth. . . . Seals are found in all parts of the ocean, but more especially in the Southern Pacific, where their great abundance, and the value of the oil extracted from their bodies, have given rise to considerable fisheries, chiefly carried on in ships sent from this country. They are likewise inhabitants of the Frozen Ocean, where both their oil and skins are much prized by the inhabitants. — *Swainson, On the Natural History and Classification of Quadrupeds*, §§ 124, 139.

Two small barks were employed in fishing and trading along the coast. The singly of herrings, pickled, mackerel, and salmon was plentiful, and would have been still more plentiful, had not the benches, in the finest part of the year, covered by multitudes of seals, which preyed on the fish of the bay. Yet the seal was not an unwelcome visitor: his fur was valuable; and his oil supplied light through the long nights of winter.—*Macaulay, History of England*, ch. xii.

Seasoning. verbal abs.

1. Act by which anything is seasoned

2. That which is added to anything to give it a relish.

of leavenings and seasonings; so that some do ex-
tremely move appetites, and some do nourish as
divers do live of them alone.—*Ramus.*

Some abound with words, without any seasoning
or taste of matter.—*R. Johnson.*

A foundation of good sense, and a cultivation of
learning, are required to give a seasoning to retire-

Shakespeare, Troilus and Cressida, i. 3.

be good or evil.—*Hakewill, Apology.*

3. Mansion; residence; dwelling; abode.

It were enough in reason to succeed with victuals,

Whose horrid image doth uplift my hair,
And makes my soles heart knock at my ribs,

Seatest. adj. Tied by the sea.

The ship upon whose deck
The sea-lost prince appears to speak,
Shakespeare, Pericles, iii. Gower.

Seawall. s. Embankment against the sea.

There is much difference of opinion among en-
gineers as to whether *sea-walls* intended to counter-
act the shock of the waves should be vertical, or in-
clined like a beach. . . . The best material for the
heart or body of a *sea-wall* is stiff clay, but
even this material requires to be carefully marked
to prevent peroration. In Essex the clay is dug
from the fore shore in spits, and packed into a
sea-wall by an operation termed *Flod Flanking*.
The spits are delivered by the barrow men to the
packers, who, taking each spit on a pitchfork,
strike it forcibly into its place. The revet-
ment by the shrinkage of the spits in drying are
filled with mud, which is called *sludging*. Post or
bag is sometimes used for *sea-walls*, and it is fit-
tous and tough, but light, and requires to be weighted
with stone. Gravel is valuable for the formation of
an artificial beach at the foot of the wall, and which
also serves as a road. Usually *sea-walls* are faced
with stone, and by spreading gravel over this facing
the small stones bind themselves and wedged
the large stones together. *Bouquet, in Grande and
Gaz, Dictionary of Sciences, Literature, and Art*.

Seawalled. adj. Surrounded by the sea.

Our *sea-walled* garden, the whole land,

Is full of weeds. *Shakespeare, Richard II.* iii. 4.

[They] victualling again, with brave and manlike
minds,
To *seaward* cast their eyes, and pray for happy
winds.

Dryden, Polydorus, some n.

Seawater. s. Water of the sea; salt (as
opposed to fresh) water; natural (as op-
posed to artificial or mineral) salt water.

By digging of pits in the sea-bore, he did frustrate
the laborious works of the engineers, which had turned
the *sea-water* upon the wells of Alexandria.—*Howes,
Natural and Experimental History*.

I bathed the member with *sea-water*.—*Wiseman*.

Sea-water has many gross, rough, and earthy par-
ticles in it, as appears from its siltiness; whereas
fresh water is more pure and unmixt.—*Browne*.

Sea-water contains in 1000 parts, 25 of chloride of
sodium, 53 sulphate of magnesia, 35 chloride of
magnesium, 0.3 carbonate of lime and magnesia, 0.1

sulphate of lime, besides 1-two-thousandth of sul-
phate and minute of potash. It also contains a mole
of sodium, and bromide of magnesium. Its average
specific gravity is from 1.029 to 1.034. *Sea-water*
and weak brines may be concentrated either by the
addition of rock-salt, by spontaneous evaporation in
brine-pits, or by gradulation. . . . When it is requisite
to extract the chloride of sodium from *sea-water* by
fire alone, many countries, even maritime, would
find the process too costly. The salt is therefore
obtained from it by two different manners: 1. by
natural evaporation alone; 2. by artificial and arti-
ficial evaporation combined.—*Ure, Dictionary of
Arts, Manufactures, and Mines*.

Seaweed. s. Etymologically, this is a name
for any plant growing in the sea or salt-
water. In *Botany*, however, it is restricted
to the members of the great group *Algae*;
in which case it includes several fresh-
water plants, and excludes the *Sea-
wacks*. It is, by some botanists, further
restricted to the order *Fucales*. Prac-
tically, it may translate either the Latin
words, *Alga* or *Fucus*.

Fucales, or *seaweeds*, [are] cellular or tubular
unsymmetrical bodies, multiplied by simple spores
formed externally. Plants sometimes inhabiting
fresh water, but more commonly salt water; the
former approaching closely to the *Confervae*. . . .
The *seaweeds* have no particular geographical limits,
but occur wherever the ocean or rivers spread
themselves over the land. . . . The *Macrocystis pyra-
mida* appears to be the *seaweed* reported by naviga-
tors to be from five hundred to fifteen hundred
feet in length. . . . In the manufacture of kelp, for
the use of the glass-maker and soap-boiler, *seaweeds*
take their place among the more useful vege-
tables. . . . French kelp, according to Sir Humphry
Davy, yields more iodine than British; and from
some experiments made at the Cape of Good Hope,
Ecklonia burchardii is found to contain more than
any European *seaweed*.—*Lindley, Vegetable King-
dom*.

Seaworthy. adj. In Navigation. See ex-
tract.

[*Seaworthy*] implies the state or quality of a ship
which is in every respect fit for a voyage. Every
ship assured must, at the time of the assurance, be
able to perform the voyage, unless some external ac-
cident should happen, and if she has a latent defect,
though wholly unknown to the parties, that will
vocate the contract, and the insurers are discharged.
. . . But although the assured ought to know whether
the ship was *seaworthy* or not at the time she set
out upon her voyage, yet he may not be able to know
the condition she may be in after she is out a twelve-
month, and therefore whenever it can be made ap-
pear the decay to which the loss is attributed did
not commence till a period subsequent to the as-
surance, as she was *seaworthy* at the time, the in-
surer should be liable.—*Falconer, Nautical Dic-
tionary*. (Barney.)

Seawrack. s. Etymologically, any marine
plant; especially when thrown up by the
sea, or collected for manure, kelp, or the
like. Botanically, it is limited to the
few *flowering* plants which grow in salt-
water, allied to the *Zostera marina*, a
British plant.

Zosteraceae, or *Seawracks*, [are] marine plants re-
sembling *sea-weeds*, and living among them. Leaves
grassy, thin, sheathing at the base. Flowers very
minute, absolutely naked, or surrounded by three
sepals. . . . If we are to find anywhere a positive
indication of flowering and flowerless plants, it is
here; where, with naked flowers and distinct sears,
we have the pollen in a condition which may well
be compared with the elders of *Marshallia* and its
allies, and totally different from all that is known to
other flowering plants. The habit, too, is quite that of
sea-weeds. . . . They can scarcely be said to form any
part of the vegetation studied by man, except in the
case of the *Seawrack*, *Zostera marina*, which is
a common material for packers, and for stuffing
cushions; and has also been used for
tumours, owing apparently to the induce of the *sea-
weeds* that are gathered with it.—*Lindley, Vegetable
Kingdom*.

Sebacous. adj. [Lat. *sebum*—suet.] In
Physiology. Connected with the secretion
of a fatty matter, more especially from the
skin.

sudoriferous glands.—*Marshall, Quilnes of Physio-

of *seco*—I cut.] In *Geometry*. Right line

and meeting with another line, called a
tangent, without it.

The Analyst*, § 21.

Secede. v. n. Withdraw from fellowship or
association.

secede has been founded.—*Stratton and Cox, Dic-
tionary of Science, Literature, and Art*.

from grosser matter; make the separation
of substances in the body: (*Secrete com-
moner*).

flesh doth *seccrinate* more finely, and *seccrath* more
solidly.—*Bacon*.

The pulmo or mucus *seccrnat* in the nose and
windpipe, is not an excrementitious but a healthy
humour, necessary for defending those parts, from
which it is *seccrnat*, from exaridation.—*Arbuthnot*.

Secernat. adj. In *Physiology*. Connected
with, having the function of, secretion:
(*Secreting commoner*).

um of either hemisphere.—*Sir T. Browne*.

liance, or confederation: (especially applied
to the attempted separation on the part of
the Southern States of America).

seculars.—*Bishop Hall, Peccator's Progress*, § vii.

type, and this was spared.—*Saturday Review*,
November 21, 1868.

sionism.

The author seems to have been much struck . . .
that the Unionists . . . did not shoot, or slay any of
the *Secessionists*.—*Saturday Review*, November 21,
1868.

Secle. s. [Fr. *siècle*; Lat. *seculum*.] Cen-
tury. *Absolute*.

time, and part after his son's birth; and therefore
it is wont to be said that three generations make
one *seccle*, or hundred years, in the genealogies.—
Hawmud, Practical Catechism.

Seclude. v. a. [Lat. *secludo*; pass. part.
seclusus; *seclusus*,—*onis*.] Confine from;
shut up apart; exclude.

gree, state, or calling.—*Archbishop Whately*.

state of *seclusion*.—*T. Warburton*.

man, History of Latin Christianity*, l. ii. ch. iii.

Secund. adj. [Fr.; Lat. *secundus*.]—The

ins and the nations deriving from them
have none of *duo*. What the Latins call
secundus, from *sequor*, the Saxons term
order, i. e. other.]—

1. Next in order to the first; ordinal of two.

Stunk were their hearts with horror of the crime,
Nor needed to be warn'd a *second* time,
But bore each other back. *Dryden*.

2. Next in value or dignity; inferior.

suspected of partiality; but this I may truly say,
they are *seccund* to man in the Christian world.—

None I know

Secund to me, or like; equal much less.

Milton, Paradise Lost, viii. 406.

My eyes are still the same; each glance, each

glance,

Keep their first lustre, and maintain their place,

their employments are at an end.—*Swift*.

Second. s.

1. One who accompanies another in a duel to direct or defend him.

Their seconds minister an oath,
Which was indifferent to them both,
That on their knightly faith and truth

No much those supplied;
And sought them that they had no charms,
Where-with to work each other's harms,
But came with simple open arms

To have their causes tried. *Drayton, Nymphid*
Their first encounters were very furious, till after
some toll and bloodshed they were parted by the
seconds. *Addison*.

Personal brawls come in as seconds to finish the
dispute of equities. *Watts*.

leton. 'Certainly,' added the doctor. 'Unless,'
interrupted the man with the camp-stool, 'unless
Mr. Winkle feels himself aggrieved by the challenge;
in which case, I submit, he has a right to satisfaction.'
Mr. Winkle, with great self-denial, expressed
himself quite satisfied already. 'Or possibly,' said
the man with the camp-stool, 'the gentleman's se-
cond may feel himself aggrieved with some observa-
tions which fell from me at an early period of this
meeting; if so, I shall be happy to give him satis-
faction immediately.' *Dickens, Pickwick Papers*,
ch. ii.

2. One who supports or maintains; sup-
porter; maintainer.

He propounded the duke as a main cause of

3. Second division of an hour by sixty; six-
tieth part of a minute.

herent in some of the Scottish islanders).

with a fit of second sight: the face of the country
presented him with a wide prospect of his own
which he had never seen before. *Addison, Free-
holder*.

He tells us many remarkable stories, which he
collected rather as a judicious enquirer than as a
credulous believer; such as of second sight, an ac-
count of a lad who fell asleep in the field while
he chum his sheep, and then slept for fifty-seven
years, and awoke to wonder at the strangeness of
the changes that had taken place in the meanwhile.
—Sharpe, History of Egypt, ch. xii.

- Second-sighted. adj. Having the second
sight.

Sawney was descended of an ancient family, re-

first intention.

Two are the radical differences: the secondary
differences are as four. *Bacon, Natural and Expe-
riental History*.

Perhaps in a more advanced state of our know-
ledge, we may be able to state it as an axiom, that
two secondary qualities, which are infinitely con-
nected in their causes and effects, must be affections
of the same medium. *—Hewell, Philosophy of the
Infinite Science*.

But the priests were no longer the earnest sincere
teachers as of old; they had invented a system of
secondary meanings, by which they explained away
the coarse religion of their statues and sacred
animals. *—Sharpe, History of Egypt*, etc. xiv.

2. Succeeding to the first; subordinate.

Wherever there is moral right on the one hand,

words of Job from the first and real cause to the
secondary. *—Hastley*.

3. Not of the first order or rate.

If the system had been fortuitously formed by
the conveniency of a chaos, how is it con-
ceivable that all the planets, both primary and
secondary, should revolve the same way from the
west to the east, and that in the same plane? *—Beatty*.

reigning brother and sister would afford them. *—Thackeray, Vanity Fair*.

From father to his son?

Milton, Paradise Lost, v. 853.

As in a watch's fine machine,
Though many artful springs are seen,
The added movements which declare
How full the mount, how old the year,
Derive their secondary power
From that which simply paints the hour.

Prior, Alma, iii. 29.

5. See extracts.

But the most important difference between the
two forms (of small-pox) is in what is called the
secondary fever, which sets in about the eleventh
day of the disease, or the eighth of the eruption,
just when the maturation of the pustules is com-
plete, and they begin to desiccate. This secondary
fever is slightly marked in the distinct small-pox,
and very intense and periculous in most instances of
the confluent. It is at this period of the disorder
that death, in the fatal cases, almost occurs. *—Sir
T. Watson, Lectures on the Principles and Practice
of Physic*, lect. lxxvi.

A secondary fever is that which arises after a crisis,
or the discharge of some morbid matter, as after the
declension of the small-pox or measles. *—Quinn*.

6. In *Genology*. See extract.

The secondary series of rocks are admirably de-
veloped in England. Except the limestone near the
base of the whole series, there is hardly a European
secondary rock of the smallest importance that is
not well and thoroughly represented in the British
series, while many are as exhibited in such

interesting groups as to enable us to deduce a
history of the period more complete than can
be learnt elsewhere. . . . In consequence of this ad-
mirable development, the English geologists have
elevated the subdivisions of the series into an im-
portance not warranted by what is known in Euro-
pean countries. In Asia and America, secondary
rocks are still less important than on the mainland
of Europe. The secondary rocks include in England
the best limestones for building purposes, but no
marble properly so called. In the Alps, the rocks of
this kind are much more metamorphosed, and exist
on a far greater scale. The key to the complications
of the Alpine system lies, however, often been found
by a close study of English rocks and their fossil
contents. The secondary rocks are extremely rich
in fossils, and are remarkable for the number and
variety of bones of reptiles found in them. The
period has for this reason been called the Age of

Secrète. v. a.

1. Hide; conceal.

2. Form as a secretion.

(For example see under following entry.)

Secretion. s.

1. Agency in the animal economy that consists in separating the various fluids of the body.

The literal meaning of the term secretion is separation; and this is nearly its true application in physiology. But the ordinary processes of nutrition involve a separation of certain of the components of the blood, which are withdrawn from it by the appropriating power of the solid textures; and every such removal may be considered in the light of an act of excretion, so far as the blood and the rest of the organism are concerned. Moreover, the separation of certain matters from the blood in a fluid state, either for the purpose of being cast forth from the body, or of being employed for some special purpose within it, which constitutes what is ordinarily known as secretion, is effected by the activity of the nature with that whose operation constitutes an essential part of the nutritive process; namely, the production and subsequent decay of cells. Hence there is no other fundamental difference between the two processes, than such as arises out of the diverse destinations of the separated matters, and from the anatomical arrangements which respectively minister to these. — *Dr. Carpenter, Principles of Human Physiology*, § 363; 1864.

2. That which is secreted.

The principal part of the secretions of plants is deposited in some prominent station in them; as in the roots of ferns, and the bark and heart-wood of trees and shrubs. It appears, however, that they have, besides this, the power of getting rid of superfluous or deleterious matter in a material form. In the Linnæan herb *Plumier* there is a large pore terminating the veins of the apex of the leaf, from which water is constantly distilled. The pitchers of *Nepenthes*, which are only a particular kind of leaves, secrete water enough to fill half their cavity. But besides this more subtle fluid, secretions of a gross quality take place in plants. The honeydew . . . is an instance . . . of the sort is another, and the gum balsamum that exudes from *Cistus ladaniferus* is a third instance of this kind of perspiration. — *Lindley, Introduction to Botany*, b. ii. c. xiv. p. 395; 1845.

Secretist. s. Dealer in, or seller of, secrets.

All the lines of the *sector* can be recommended to

scales; the corporal's heart stood still—he is now at a

1. Authority; acknowledgement of power.
They brought work to the mint, and a part of the
money went to the crown for a *seignorage*.—*Locke.*
2. Payment made for the use of a patent.
The *seignorage*, if levied at all, must not be too
high, else it affords an almost irresistible temptation
to private coming, and as it must be high in order
to form any important branch of revenue, it is gene-
rally no more than is thought sufficient to cover the
cost of minting. The effect of a *seignorage* is to
make coin more valuable than bullion. In this
country no fixed *seignorage* is levied on gold, which
is the standard of value. Any person may have
standard gold coined in quantities of not less than
tunard, at the public cost. The short delay, in-
deed, during which the manufacture takes place
would amount by the interest on the specie to a
slight *seignorage*; but as the coinage is carried out
through the agency of the Bank of England, and no
private person can employ the agency of the mint
for obtaining securities, the loss is not really in-
curred, and such a *seignorage* as might affect the
private individual does not take effect on the Bank
issue of coin. In France, however, coin is worth
more than bullion, by reason of the *seignorage*, and
when monetary transactions take place between
this country and France, coin must be treated as
bullion. . . . A considerable *seignorage* is levied on
the silver and copper currencies in this country.—

and Art.*

Some of the best illustrations of functional heredity, are furnished by the mental characteristics of human races. Certain powers which mankind have gained in the course of civilization, cannot, I think, be accounted for, without admitting the inheritance of acquired institutions. The musical faculty is one of these. To say that 'natural selection' has developed it, by preserving the most musically endowed, seems an inadequate explanation. — *Herbert Spencer, Principles of Biology, pt. ii, ch. viii*.

Selective. adj. Exercising choice in the way of selection.

Selenites. s. [Gr. *σεληνίτης*, from *σελήνη* - moon.]

My next attempt was made . . . with a fine telescope by Cooke, of 64-inch aperture and 11 feet sideral focus, mounted equatorially, in the old English mode, and carried by clockwork. With this excellent arrangement I was enabled to use photography very successfully, and to obtain *selenographs* 2 inches across in 5 seconds of time. The drawing of Cassenell, No. 3, was made with this instrument. From these experiments the conclusion was obvious: — that for obtaining good drawings of the moon, convenient mounting was actually more important than great optical power; and that for such a purpose it was desirable to increase in every way the comfort of the observer, and furnish him with special arrangements for his own position and the placing of his drawing-board and light. — *J. Phillips, On some Parts of the Surface of the Moon, in Proceedings of the Royal Society, Jan. 16, 1848.*

Self. In most languages the word which either has the same meaning as *self*, or constitutes an approximate equivalent, is more or less irregular; whilst in English the question as to its nature is one of more than ordinary difficulty.

In English, the fact which first commands attention is, to a great extent, a negative one. It affects the language, however, to a great extent. In Latin, and in all the languages derived from the Latin, there is what is called the Reflective Pronoun of the Third Person, viz., *se*, with its secondary forms, *sui*, *sibi*, *suus*, *sua*, *sum*, &c.; and with its compounds, *seipse*, *semet*, and others. It is the Greek *ἐν ἑαυτῷ*, the aspirate representing the *s*. In the Slavonic and Lithuanic the same word appears; and so it does in all the German languages and dialects of the Continent. It is the *sich* of the Teutonic, the *sik* and *sig* of the Scandinavian, tongues.

But in English it is wanting; wanting in the earlier epochs of the language, as well as in the later: all that the Anglo-Saxon stage gives us being a few instances of the possessive pronoun *sin* (his, hers, or its) in poetry, and these in the single poem of Beowulf. In the Old Saxon, however, of Westphalia, it is as common as in the other German forms of speech. Without accounting for this remarkable instance of defect in English, we may note three points wherein it affects the language: — (1) From having nothing to coincide with the Latin *suius*, *sua*, *sum*, the German *seiner*, *seine*, *seiner*, and the Norse *sin*, *sit* (forms giving us a difference of gender), we express possession on the part of an object in the third person, by the genitive cases *his*, *her*, and *its*; so that, when the name of the object possessing and that of the object possessed differ in gender, we get such combinations as *his mother*, and *her father*. (2) We have no simple reflective pronoun like

the *se* of the classical, the *sie* of the Slavonic, and the *sich*, *sig*, *sich* of the German languages; an element which in the Scandinavian, or Norse, branch has developed a true passive voice—e.g. from the Old Norse *kalla mik* (= call myself), &c., we have *kalla sig* (= call one's self), for all three persons; *kalluse* (= call one's self and be called); *kallast*, *kallastu*, *kallastis* (= am called), the ordinary passives of the present Swedish and Danish. (3) We have the difficulties connected with the construction and the composition of the word *self*, which form the subject of the present notice.

There is no very easy way of giving the meaning of *self*, except in a general and approximate manner. It suggests the ideas of *personality*, *individuality*, and *identity*; and this gives, probably, its primary meaning. In these there is the notion of a *unit*; and as the act of a person who does anything to himself limits both the act and the result of it to a single object, a connection with the idea suggested by the term Reflective (Pronoun or Verb) is manifest. The complications increase, however, when, in coming to the details of certain constructions, we ask *how* the word, as a *Part of Speech*, has such or such an import. Thus—

1. We may say, 'I one and individual, personal, or identical, mean this;' in which case the construction is purely and simply adjectival.

2. We may say, 'I the individual mean this;' in which case the adjective is treated as a substantive.

3. We may say, 'My individuality means this.' This gives us a true substantive.

4. 'I, myself, mean this.' What have we here? That depends upon which of the two constructions we consider. Take *myself* as it is spelt, i.e. as a single word, and it means, I *individually*, *personally*, *actually*, *identically*, and the construction is adverbial. Analyze, however, the combination, and *self* becomes a substantive. Hence the construction is that of *my hand*, *my body*, *my person*, and the like. To I it stands in apposition; just like, 'I, your master; I, my father's son.'

5. 'He hit himself.' Here, too, we may say there is an adverbial import; also that there is an apposition. But the apposition is that of *him* and *self*; not that of *himself* and *he*. This is as much as need be said in the introduction of the peculiarities of the word.

Johnson has entered the word as a pronoun, and that rightly; but he has (less rightly) followed up the entry by the remark that its primary signification seems to be that of an adjective.

The present Editor will deal with the word—I. When it stands alone; and II. When it enters into either Combination or Composition.

I.—Standing alone.

Self. *s.* Individuality; personality; identity. Its shades of meaning range from the metaphysical sense of *ego* (see *Egoism*), to the colloquial sense of *Number one*; as in, 'Take care of *number one*,' i.e. of *yourself*. The plural is *selves*.

Self is that king thing, which in solitude or converse of pleasure and pain, capable of happiness and misery, and so is concerned for itself as for all that consciousness extends. *Locke.* Since consciousness always accompanies thinking, and it is that that makes every one to be what he

calls *self*, and thereby distinguishes himself from all other thinking things; in this alone consists personal identity, i.e. the sameness of a rational being. — *Locke.*

It is by the consciousness it has of its present thoughts and actions, that it is *self* to it *self* now, and so will be the same *self*, as far as the same consciousness can extend to actions past or to come. — *Ibid.*

The fineness we have for *self*, and the relation which other things have to our *selves*, furnishes another long rank of prejudices. — *Hutcheson.*

I know ye; and these lakes and rivers know The darkness and the clangour of your wings. But why more hideous than your famished *selves* Gather ye up in legions from the deep? — *Shelley, Prometheus Unbound.*

Peace, wait! thou art yet not old enough. Think ye by gazing on each other's eyes To multiply your lovely *selves*, and fill With sphered fires the interior air? — *Ibid.*

Martin . . . had been bred up in his grandfather's house; and it will usually be found that the manner domestic views propagate themselves to be their own antagonists. Selfishness does this especially; so in suspicion, enmity, stealth, and evilious propensities. Martin had unconsciously reasoned as a child, 'My guardian takes so much thought for himself, that unless I do the like by myself, I shall be forgotten.' So he had grown selfish. But he had never known it. . . . He never would have known it, but that being newly risen from a bed of dangerous sickness, to watch by such another couch, he felt how nearly *self* had dropped into the grave, and what a poor dependent, miserable thing it was. It was natural for him to reflect he had months to do it in upon his own escape, and Mark's extremity. This led him to consider which of them could be the better served, and why? Then the curtain slowly rose a very little way; and *self*, *self*, *self*, was shown below. He asked himself, . . . whether he had done his duty by him, and had observed and made a good response to his fidelity and zeal. No. Short as their companionship had been, he felt in many, many instances, that there was blame against *self*; and still inquiring why, the curtain slowly rose a little more, and *self*, *self*, *self*, dilated on the scene. — *Dickens, Martin Chuzzlewit*, ch. xxxii.

Self, *adj.*

1. In the extract, (her) own. *Barbarous.*

Calling home our exiled friends abroad, That fled the suns of watchful tyranny Producing forth the cruel ministers Of this dead butcher and his fiendlike queen; Who, as 'tis thought, by *self* and violent hands, Took off her life. — *Shakespeare, Macbeth*, v. 7.

2. Same; selfsame.

In my school-days, when I had lost one shaft, I shot his fellow of the selfsame flight The selfsame way, with more advised watch, To find the other forth. . . . If you please To shoot another arrow that *self* way Which you did shoot the first. — *Shakespeare, Merchant of Venice*, i. 1.

I'm made of that *self* metal as my sister. And prize me at her worth. — *Ibid., King Lear*, i. 1. On these *self* hills the air is so thin, that it is not sufficient to bear up the body of a bird. — *Sir W. Raleigh.*

At that *self* moment enters Palamon The gate of Venus. — *Drayton, Palamon and Arcite*, iii. 362

Here the word is an adjectival pronoun rather than a true adjective. It has not, however, been thought necessary to make a separate entry.

Self, *pron.* This is what the word actually is, as a *Part of Speech*; whether we consider its inflection or its import. An objection has been made on the score of its having a plural—*selves* in the present, and *selves* in the older, stages of our language. The same applies to *others*, and *ones*; as, 'My wife and little *ones*.' In the way of import it expresses a relation; a relation, indeed, of a peculiar kind; but one which is generally recognised as a relation; viz. the relation of identity, as in the formula 'A is A.' As a pronoun, however, it is more substantival than adjectival, as may be seen by the preceding entries.

This pronominal character is by no means incompatible with the statement (under 5) that its import may be adverbial, indeed that it may be an actual adverb. The same is the case with *either*, *neither*, and other words; for which there are two renderings, as in 'Either A or B is to blame,' which may be either 'One or the

other,' or 'In the way of an alternative.' See under Either. It is in composition, however, that the question as to its nature takes its chief importance.

II. Combination and Composition.

a. As the first element. Here the list of examples (which are arranged chronologically) stands as it was left by Johnson: Tull, before the present editor, having thought it unnecessary to extend it. The character of the compositions, however, may be noticed. The best and simplest are those where the second element is the present participle of a transitive verb; in which case the government is simply that of a verb and noun, the intervention of a preposition in the analysis of its import being unnecessary; e.g. *self-supporting*, *self-terminating*. When the participle is *passive*, i.e. *passive*, the intervention of *by* is required; *self-tormented* = tormented by (one's) self. With *tormentor*, or *supporter*, and the verbal abstracts in -ing, there is the similar implication of some preposition -tormentor of (one's) self.

As the transitive and verbal character of the first element becomes obscure, the compound becomes exceptionable; i.e. the preposition required for the full rendering of it and the import of the word *self* become uncertain. The remark that Shakespeare's use of the word is harsh (the present editor would use a stronger term) is Johnson's, and it is one which the examples verify.

b. As the *second element*, the *first* being a
• pronoun. Here the combinations are as
follows:—1. With the pronouns of the first
and second person. 2. With those of the
third.

1. With *my-self*, *thy-self*, *our-selves* and
your-selves, the construction is that of a
substantive, preceded by either a possessive
case or an adjective; in other words, by an
equivalent to either *mei*, *tui*, *nostrum*,
vestrum, or *meus*, *tuus*, *noster*, *vester*. The
treatment of the two words as one is
merely a piece of printing. When they
came together they *must*, when any word
comes between them they *must*, be se-
parated—*my own self*, *our noble selves*, &c.

2. With *himself* and *themselves*.

(a.) In the *objective* (accusative) case the
construction is either that of two pronouns
in apposition, or of a pronoun followed by an
adverb; the former view being the
simpler, the latter being complicated by
recognition of a plural number for adverbs.

• The sense, however, in both is adverbial.

(b.) With *herself*, the first element is am-
biguous. It may answer to *my* and *thy*,
or it may answer to *me* and *thee*. The
analogy of *himself* would make it ac-
cusative.

(c.) With *it* and *one*, the analysis is com-
plicated by the spelling; since, whether
the combinations be *its + self* and *one's +
self*, or *it + self* and *one + self*, the difference
is one which in writing is likely to be
neglected. It is probable, however, that
the omission of the second *s* is correct; in
other words that the rule stands as follows.
With the first and second persons the first
element is possessive; with the third (for
the three genders and the two numbers) it
is accusative.

But we not only say '*He hit himself*,' but
'*He himself hit me*,' and the like; in other
words we use an accusative form with a
nominative sense. Whatever we may call
this—irregularity, anomaly, paradox, solec-
ism, &c.—it is as old as the Anglo-Saxon
period, and it occurs in other languages.

Himself in the nominative case... has long been
authorized by constant custom; and it is remarkable,

that a subversion of the same sort has prevailed in the
French language, in which *moi* and *soi*, the oblique
cases of *je* and *tu*, when combined with *me* and *te*, are
used as nominatives as *my* and *thy* have
just been supposed to be when combined with *self*.
Je lui en veux—*me*—*moi*; I have seen it myself; *Tu le
regardes*—*toi*—*toi*, thou shalt see it thyself; and so, in the
accusative case, *me-même* is added emphatically
to *me*, and *toi-même* to *te*. It is probable, I think,
that these particles, from grammar, in both lan-
guages, have been made for the sake of fuller and
more agreeable sounds. *Je-même*, *tu-même*, and *le-
même*, would certainly sound much thinner and
more languid than *moi-même* and *toi-même*; and
me (f, thy) f, &c., are as clearly preferable in point
of pronunciation, to *self*, *me (f, thy) f, &c.*,
&c., though not all, perhaps, in an equal degree. It
should be observed, that *self*, where a change of
case in the pronoun would not have improved the
sound, has never undergone any alteration.—Ty-
nwald, *Glossary to Chaucer's Self*.

For another view of this see under *My*;
where the original objective character of
me, *thy*, *rich* (i.e. the reflexive pronoun) is
supposed to have had the effect of exclud-
ing from composition the *nominative* alto-
gether, and the other cases to a great
degree.

In the way of *syntax* the omission of the
simple pronoun is exceptional.

A horse well fitted which *himself* did dress.

Depden.
And touched with miseries *myself* have known.
I learn to pity woes so like my own. Id.

In full—he *himself*, I *myself*.

Self-heal. s. In *Botany*. Popular name of
two native plants; (1) *Sanguinaria*; (2) *Prun-
ella*. It is to this last that it is most
generally applied. The first syllable is
generally, looked upon as a corruption of
slough. The extract, however, shows that
this view (perhaps on insufficient grounds)
has been objected to.

Self-heal, correctly so spelt, and not *slough-heal*,
... It meant that with which one may cure one's
self, without the help of a surgeon, to which effect
it corresponds a French proverb, that *no one wants a
surgeon who keeps Prunella*.—Dr. J. P. P. *Popu-
lar Names of British Plants*, in *voce Self-heal*.

Slough-heal [as] supposed, but mistaken cor-
rection of *self-heal*, the *slough* being that which is
thrust off from a foul sore, and not that which is
healed, the wound itself. Besides, the term *slough*
was not used in surgical business till long after the
plant had been called *self-heal*, and applied as a
remedy, not to sloughing sores, but to fresh cut
wounds.—Id., in *voce Slough-heal*.

Selish. adj. Attentive only to one's own

and such a goodness as will proportion a reward to it.
—Addison, *Spectator*.

Selishly. adv. In a selish manner; having

signal.] Word of recent origin, used,
with doubtful advantage, as, an approxi-

irregularity; the compound being founded upon
the nominative *sema*, and *phor*, instead of the
foller and more fundamental forms *sema*, and
phor. . . . This locution is as old as the best Greek
writers; where we have *sema*, from *sema*, rather
than *sema*—mouth.—Dr. H. G. Latham, *English
Language*.

He [Pope] died in May, 1744, about a year and a half before his friend Swift, who, more than twenty years his *senior*, had naturally anticipated that he should be the first to depart, and that, as he rymed, and yet touchingly too, expressed it, while Arbuthnot grieved for him a day, and Gay a week, he should be lamented a whole month by 'poor Pope'; when, of all those he best knew, he seems to have the most loved.—*Cruik, History of English Literature*, vol. ii. p. 225.

There are several species with properties sufficiently alike to be confounded with one another: (often used *adjectively*, or as the *first element* in a compound).

What rhubarb, *senna*, or what purgative drug, Would scour these English hence!

Shakespeare, Macbeth, v. 3.

Senna tree is of two sorts: the bastard *senna*, and the scorpion *senna*, both of which yield a pleasant leaf and flower.—*Mortimer, Husbandry*.

Purgative properties are the great character of this sub-order [the Cusci].

Their most remarkable product. The *senna* of the shops consists, according to Deile, of *Cassia acutifolia* and *Cyananthum Argel*. It says the *Cassia lanceolata* of Arabia does not yield the *senna* of commerce, but this statement is at variance with the positive statement of Forskhal. For the various qualities of *senna*, the reader is referred to the Flora Medica and other works in which the subject is treated especially; it will there be found that many species yield this useful drug, which, according to Fallois, is not an Egyptian product, as is usually supposed, the whole... of the Alexandrian product coming from Dongola. . . . Well-marked purgative properties occur in *Cochlospermum* (*Shalobersenna*), whose leaves are used for adulterating the burnt-bay *senna* of the druggists, *Cornelia cuneata* (*Scorpion senna*) and *C. varia*, which last is even poisonous; as well as in certain species of *Genista*, *Cytisus*, *Rubinia*, *Chitoria*, *Anagyris foetida* (plants of the sub-order Papilionaceæ). . . . Tephrosia *senna* is used as a purgative by the people... of Popayan.—*Lindley, Vegetable Kingdom*.

The leaves of various species of *Cassia*, as *C. oblongata*, *acutifolia*, . . . are reported in large quantities, . . . under the name of *senna* . . . from Alexandria, whether they are brought from Upper Egypt. They are largely mixed with the leaves of *Solenostemma Argel*, which, however, are thick, and not ribbed like the genuine *senna* leaves. They have a mucous, mucilaginous, bitter taste, and yield a pale brownish-green infusion. The true *senna* leaves are distinctly ribbed, thin, generally pointed, and when chewed have a peculiar nauseous flavour, and yield a dark brown infusion. It is a gripping, nauseating, and somewhat drastic purge, but a valuable addition to, or vehicle for, other purgatives. Other kinds are imported from India. . . . Various preparations of *senna* are used medicinally, and several different species of the plant are to be found in the markets supplying the drug. The Alexandrian and the Indian *senna* are chiefly used in this country. The former is collected in Nubia and Upper Egypt from the *Cassia acutifolia* and *oblongata*. The latter going by the name of 'timberly *senna*' grows in India, but in all probability is only naturalized there. It is the product of *Cassia oblongata*. *Senna* contains a purgative principle called Cathartin, and also an essential volatile oil.—*Moore, in Brande and Cox, Dictionary of Science, Literature, and Art*.

Sénnight. s. [sereen-night.] Week.

Time treads hard with a young maid between the contract of her marriage and the day it is solemnized: if the interim be but a *sennight*, time's pace is so hard that it seems the length of seven years.—*Shakespeare, As you like it*, iii. 2.

Diversity of constitution, or other circumstances, vary the *sensations*; and to them of Java pepper is cold. *Alexander, Synopsis Scholastica*.

The brain, discompe by a cold, beating against the root of the auditory nerve, and protruded to the tympanum, causes the *sensation* of noise.—*Harvey, Discourse of Consumption*.

This great source of most of the ideas we have, depending wholly upon our senses, and derived by them to the understanding, I call *sensation*.—*Locke*.

When we are asleep, joy and sorrow give us more vigorous *sensations* of pain or pleasure than at any other time.—*Locke*.

The happiest, upon a fair estimate, have stronger *sensations* of pain than pleasure. *Regner*.

Sensations and ideas in our knowledge are like matter and form in bodies. Matter cannot exist without form, nor form without matter; yet the two are altogether distinct and opposite. There is no possibility either of separating or of confounding them. The same is the case with *sensations* and ideas. Ideas are not transformed, but informed *sensations*; for without ideas, *sensations* have no form. The *sensations* are the objective, the ideas the subjective part of every act of perception or knowledge.—*Blackwell, Novum Organum Rationum*, Aphorismi, l. i. aph. vi-viii.

The feelings connected with the movements of the body, or the action of the muscles, have come to be recognised as a distinct class, differing materially from the *sensations* of the five senses. They have been regarded by some metaphysicians as proceed-

ing from a sense apart, a sixth or muscular sense, and have accordingly been enrolled under the general head of *sensations*. That they are to be dealt with as a class by themselves as much as by sounds or sights, the feelings of affection, or the emotion of the ludicrous, is now pretty well admitted on all hands.—*Howe, The Senses and the Intellect*, l. i. ch. i.

Sensational. adj.

Any we then obliged to give in our adherence to the *sensational* philosophy?—*Barrow, Origin of Language*, p. 115.

2. Melodramatic: (recently applied to a certain school of novelists).

The evil spirit which inhabited the breast of the old madhouse-keeper has been moved to another human form. Cast down from his former sphere, he now, in the guise of the low-class *sensational* novel-writer, endeavours to scare the poor lunatic from the benches provided for him.—*Dr. Suckley, Lectures on Mental Diseases*, lect. xiii.

Sensationalism. s. Doctrine of sensationists.

Sensationalist. s. One who regards the phenomena of mind as having their origin in sensations: (used *adjectively* in the extract).

Accordingly we are not surprised to find that Locke was claimed as the founder of a *sensationalist* school, whose ultimate conclusions his calm and cautious mind would have inherently repudiated. . . . We consider this on the whole a less objectionable term than 'sensational' or 'sensist'; the latter word is unscientific, and the former, from the things which it equates, is hardly fair.—*Barrow, Origin of Language*, p. 154, and note.

Sense. s. [Fr. *sens*; Lat. *sensus*.]

1. Faculty or power by which external objects are perceived; sight; touch; hearing; smell; taste.

This power is *sense*, which from abroad both brings the colour, taste, and touch, and so on, and sound.

The quantity and shape of every thing
Within earth's centre, or beyond its circle bound;
And though things sensible be numberless,
But only five the *sense*'s organs be;

And in those five, all things their forms express,
Which we can touch, taste, feel, or hear or see.

Sir J. Denham, Immortality of the Soul.

Then is the soul a nature, which contains
The power of *sense* within a greater power,
Which doth employ and use the *sense*'s pains;
But sits and rules within her private power.

Id.

The feeling of resistance—to begin with this—by I conceive to be ascribed, not to our organ of touch, but to our muscular frame; to which I have already more than once directed your attention, as forming a distinct organ of *sense*, the vibrations of which, particularly as existing in combination with other feelings, and modifying our *sensations*,—*Locke*.
These, as in the case of distant vision, for example, are not less important than those of our other sensitive organs. The *sensations* of this class are, indeed, in common circumstances so odious to be scarcely heeded or remembered by us; but there is probably no contraction even of a single muscle which is not attended with some faint degree of sensation that distinguishes it from the contraction of other muscles, or from other degrees of contraction of the same muscle.—*Dr. T. Brown, Lectures on the Philosophy of the Mind*, lect. x.

Mind is the interpreter of nature, science the right interpretation. The *sense* place before us the characters of the book of nature; but these convey no knowledge to us, till we have discovered the alphabet by which they are to be read. The alphabet, by means of which we interpret phenomena, consists of the ideas existing in our own minds; for these give to the phenomena that coherence and significance which is not an object of sense. The metaphysics of *sense* and ideas is the foundation of the philosophy of science. No knowledge can exist without the union, no philosophy without the separation, of these two elements. Fact and theory correspond to *sense* on the one hand, and to ideas on the other, so far as we are conscious of our ideas; but all facts involve ideas unconsciously; and thus the distinction of facts and theories is not durable, as that of *sense* and ideas is.—*Whewell, Novum Organum Rationum*, Aphorismi, l. i. aph. l-v.

2. Perception by the senses; sensation.

In a living creature, though never so great, the *sense* and the affects of any one part of the body instantly make a transgression throughout the whole.—*Barrow, Natural and Experimental History*.
If we had no sense but *sense*, then only they should have sound minds which have their *sense* sound;

But wisdom grows when *senses* do decay.

And fully must in quickest *sense* be found.

Sir J. Denham, Immortality of the Soul.

Such is the mighty swiftness of your mind,
That, like the earth, it leaves the sea behind.
Deftly, To the Lord Chancelor Hyde, 1641.

This rest might yet have led him to broken peace.

which we call natural light and reason, and common sense. *Baileg.*
Something there is more useful than expense,
And something precious to us to lose. 'Tis a sense,
Good sense, which only is the gift of heaven.

A light within yourself you must perceive;
Jones and Le Notre have it not to give.
Pope, Moral Essays, iv. 41.

6. Reason; reasonable meaning.

As lumps of sand, and scattering while from sense;
You see he knows not me, his natural father . . .

couraged to believe that in some sense all things are
made for man, that therefore they are not made
all for themselves. *Dr. H. More.*

and what is since, is, in a local sense, within the
time of memory. *Sir H. Hall.*

one of those senses, and leave it only one possible use,
and all the other senses or ideas by other words. *Watts, Logic.*

Sensed, part. adj. Perceived by the senses.

Let the scientist tell me, why things must needs be
so as his individual senses represent them; is he

and unphilosophical reluctance of Tully. *Locke.*

Sensibleness, s. Attribute suggested by

Sensible.

1. Possibility to be perceived by the senses.

Not was it altogether bodily pains that made him
withdraw the senseless of divine assistance
from him. As the sun at our Saviour's crucifixion,
though not disjoined from the world, yet for a time
deserted the world by withdrawing his light from it.
And although this withdrawing the senseless of the
divine presence was done without any aversion,
or dislike, of the person of our blessed Lord,
which not only before, but at that very instant
was tenderly beloved of God, yet the apprehension
of it could not but make him become his case as
that said exclamation, 'My God, my God, why (or
how) hast thou forsaken me?' *Hallwell, Sermon
of St. Paul, p. 22: 167.*

2. Actual perception by mind or body.

Sensitive plant. s. Plant of the genus Mimosa so called.

Vegetables have many of them some degrees of motion, and, upon the different application of other bodies to them, do very busily alter their figure and motion, and so have obtained the name of *sensitive plants*, from a motion which has some resemblance to that which in animals follows upon sensation. — *Boyle*.

Whenever does it happen, that the plant, which will We name the *sensitive*, should be moved and feel? Whence know her leaves to answer her command, And with quick horror fly the peevish morning hand? — *Pope, Soliman*, i. 58.

The *sensitive plant* is so called, because, as soon as you touch it, the leaf shrinks. — *Martine, Herbarius*.

The flower consists of one leaf, which is shaped like a funnel, having many stamens in the centre; these flowers are collected into a round head; from the bottom of the flower rises the pistil, which afterwards becomes an oblong flat-jointed foot, which opens both ways and contains in each part one roundish seed. At this point the female plants are a species, which are so called, because, upon being touched the pistil of their leaves falls downward; but the leaves of the *sensitive plant* are only contracted. — *M. R. Turpin's Dictionary*.

A *sensitive plant* in a garden grew, And the yanna winds led it with silver dew, And it opened its fan-like leaves to the light, And closed them beneath the kisses of night, And the Spring rose as the garden fair, And the Spirit of Love left everywhere; And each flower and herb on earth's dark breast Rose from the dremas of its wintry rest, But none ever trembled and panted with bliss; In the garden, the field, or the wilderness, Like a doe in the mountain with love's sweet want, As the companionless *sensitive plant*. — *Shelley, The Sensitive Plant*.

In certain species [of the Oxalis] the plants akin to the wood-sorrels [in irritability of so marked a kind has been found as to cause them to be classed among *sensitive plants*. — *Averroes bilimi and Oxalis*.

is sensitive are the most remarkable; but the same irritability has been observed by Professor Warren in the European Oxalis stricta. — *Lindley, Vegetable Kingdom*.

When the leaf of a *sensitive plant* is at rest, it consists of many leaflets spreading flat, and connected in pairs along the sides of certain common leaf-stalks. When one of these leaflets is irritated, the pair to which it belongs rise up, and apply their fibres to each other; this is rapidly followed by the same action in the successive leaflets, and in the course of a few seconds the whole of the leaflets are in a state of collapse; then the leaf itself suddenly bends downwards; and if the plant is in very good health, the shock thus communicated to it will extend to those immediately above and below. After a time the leaf resumes its original position. Upon the approach of night, that is to say, upon the withdrawal of light, the leaf falls of itself into the same state, without any special irritation. This kind of irritability is by no means confined to the Mimosa garden; many among the Leg. it is also found beyond the great Atlantic. — *Hedysarum pyramis*, whose three leaflets are in a continual state of dancin or balancing during the day. . . . Nor is such irritability confined to this order; the ternate and pinnate leaved species of Oxalis, the *Hebea muscipula*, and numerous other plants, exhibit similar phenomena. — *Id., in British and Foreign Dictionary of Science, Literature, and Art*.

Sensitively, adv. In a sensitive manner.

The sensitive faculty, through the nature of man's sense, may express itself more *sensitively* towards an inferior object than towards God; this is a piece of frailty. — *Hammond*.

Sensorium. s. [Lat.] Part where the senses transmit their perceptions to the mind; seat of sense.

As sound in a bell or musical string, or other sounding body, is nothing but a trembling motion, and the air nothing but that motion propagated from the object, in the *sensorium* is a sense of that motion under the form of sound. — *Sir I. Newton*.

Imagine that an immense number of fingers could be packed side by side, so that their ends made a flat surface; and that each of them had a separate nervous connection with the same *sensorium*. If anything were laid upon that flat surface formed by these finger-ends, an impression of touch would be given to a certain number of them — a number great in proportion to the size of the thing. — *Herbert Spencer, Principles of Psychology*.

the voluptuousness of a *seraglio*.—*Norris*.

Adulation, however, could not alter the general
condition and fortune of this unhappy being, who
became a sovereign without knowing what it is to be

dial slave; forced labourer attached to the
soil. See also Villein.

A great part of them were *serfs*, and lived in a
state of absolute slavery or villanage.—*Hume, His-
tory of England, Appendix II. after the Life of
King John.*

The characteristic distinction of a *villain* was his
obligation to remain upon his lord's estate. He was
not only precluded from selling the lands upon
which he dwelt; but his person was bound, and the
lord might reclaim him at any time, by suit in a
court of justice, if he ventured to stray. But, equally
liable to this confinement, there were two classes of
villains, whose condition was exceedingly different.

In England, at least from the reign of Henry II.,
one only, and that the inferior species, existed; in-
capable of property, and destitute of redress, except
against the most outrageous injuries. The lord
could seize whatever they acquired or inherited, or
convey them, apart from the land, to a stranger.
Their tenure bound them to what were called *villain*
services, trouble in their nature, and indeterminate
in their degree; the millage of timber, the carrying
of manure, the reaping of reeds for their lord, who
seems to have possessed an equally unbounded right
over their labour and its fruits. But by the customs
of France and Germany, persons in this abject state
seem to have been called *serfs*, and distinguished
from *villains*, who were only bound to fixed pay-
ments and duties in respect of their lord, though, as

it seems, without any legal redress, if injured by
him.—*Hallam, View of the State of Europe during
the Middle Ages, ch. ii.*

One of the most remarkable privileges of chartered
towns was that of conferring freedom on runaway
serfs, if they were not reclaimed by their masters
within a certain time. This was a pretty general
law. . . . The cities of Launceston had the same privi-
lege. . . . A similar custom was established in Ger-
many; but the term of prescription was, in some
places at least, much longer than a year and a day.
Ibid.

less *seriatim*, or linear. Books may be put in the order
of their dates, in single file; or if they are grouped
as works in one volume, works in two volumes,
works in three volumes, &c., the groups may be
placed in an ascending succession.—*Herbert Spen-
cer, Introduction of Biology, pt. ii, ch. x. § 98.*

upon the text as it lies in the *series* of the epistle.—
Ward, Of Infidelity.

The chains of the correspondence I cannot sup-
ply, having destroyed too many letters to preserve
any *series*.—*Pope.*

The main principle of division must of course be
natural affinity; the classes formed must be natural
groups; and the formation of these has already been
sufficiently treated of. But the principles of natural
grouping must be applied in subordination to the
principle of a natural *series*. The groups must not
be so constituted as to place in the same group
things which ought to occupy different points of the
general scale.—*J. S. Mill, System of Logic, pt. iv,
ch. viii, § 1.*

2. Succession; course.

This is the *series* of perpetual woe,
Which thou, alas! and thine are born to know.

serious round about us; God is *serius*, who exer-
ceth patience towards us; Christ is *serius*, who
shed his blood for us; the Holy Ghost is *serius*,
who stirrith against the obstinacy of our hearts;
the Holy Scriptures bring to our ears the most
serius things in the world; the Holy Sacraments
represent the most *serius* and awful matters; the
eternal creation is a *serius* in seeing God, and us;
all that are in heaven or hell are *serius*; how then
can we be gay? To give these excellent words their
full force, it should be known that they came not
from the priesthood, but the court; and from a
courtier as eminent as England ever boasted.—
Young.

gravely; solemnly; in earnest; without
levity.

It cannot but be matter of very dreadful con-

must needs surprise that man, at the last day of
account, who had led his whole life by one rule,
when God intends to judge him by another.—*South,
Sermons.*

All hunch'd to find
Unthinking plainness so overjoyed thy mind,
That thou could'st *seriously* persuade the crowd
To keep their oaths, and to believe a God.
Creech, Translation of Juvenal, xii. 54.

Justin Martyr, Tertullian, Lactantius, and Arno-
bins, tell us, that this martyrdom first of all made
them *seriously* inquisitive into that religion, which
could calm the mind with so much strength, and
overcome the fear of death, nay, raise a earnest
desire of it, though it appeared in all its terrors.—
Addison.

Sériousness. s. Attribute suggested by
Serious; gravity; solemnity; earnest
attention.

That spirit of religion and *seriousness* vanished all
at once, and a spirit of libertinism and profaneism

Grand *serjeantry* is that where one holdeth lands of the king by service, which he ought to do in his own person unto him: as to bear the king's banner or his spear, or to lead his horse, or to be his marshal, or to lead a horse, when he with his enowels invade the land; or to find a man at arms to fight within the four seas, or else to do it himself; or to bear the king's sword before him at his coronation, or on that day to be his sewer, carver, butler, or chamberlain. Yet *serjeantry* is where a man holdeth land of the king, to yield him yearly some small thing toward his wars; as a sword, dagger, bow, knife, spear, pair of gloves of mail, a pair of spurs, or such like.—*Covent*.

As for our *sermons*, be they never so sound and perfect, God's word they are not, as the *sermons* of the prophets were; no, they are but ambiguously termed his word, because his word is commonly the subject whereof they treat, and must be the rule whereby they are framed.—*Musker, Ecclesiastical Policy*.

This our life, exempt from publick haunt, Finds tongues in trees, books in the running brooks, *Sermons* in stones, and good in every thing.

Shakespeare, As you like it, ii. 1.

Serpent, in zoology, [is] a general name for the species of the order Ophidia. *Serpents* are divided into *snakes*, or *Pseudophidians*, and *trues*, or *Ophidians* proper. The *Pseudophidians*, although presenting the well-marked external characters of the order, retain an imperfect pelvis, a small sternum, scapula, and coracoids or clavicles, hidden beneath the skin; whereby, as well as in the structure of the skull, they approach the *Saurian* order. . . . The *trues* *serpents* have neither sternum nor vestige of the scapular arch. . . . The last tribe of true *serpents* includes the *Hydrophides*, or sea-snakes, which have likewise a poison-gland and duct, the latter being enclosed by the last instead of the first of the maxillary series of teeth. The tail of the sea-snake is flattened vertically, and forms their chief organ of swimming. No species of this family has yet been discovered which exceeds ten feet in length. Mure, Critical History of the Language and Literature of Ancient Greece*, ch. iv. § 1.

2. Fawning; cringing.

The most *servile* flattery is lodged the most easily in the grossest capacity; for their ordinary conceits draweth a yielding to their pretences, and then have they not wit to discern the right degree of duty.—*Sir P. Sidney*.

3. In Grammar. Applied to those letters (in Hebrew and Arabic grammars) which are used in the inflectional parts of words, as opposed to the *radical*, i.e. those which are found in the root, but not in the inflection.

Sérvility, adv. In a servile manner; (the *l* doubled in sound as well as in spelling).

Who more than thou Once fawn'd, and cring'd, and *servility* adored Heaven's awful monarch? *Milton, Paradise Lost*, iv. 108.

T' each changing news, they changed affections bring, And *servility* from fate expect a king. *Dryden, Aurengzebe*, i. 1.

He affects a singularity in his actions and thoughts, rather than *servility* to copy from the worst.—*Swift*.

Sérvility, s.

2. Meanness; dependence; baseness.

3. Submission from fear.

The angels and demons, those by their inferiority, and these by the *servility* of their obedience, manifestly declared Christ and his apostles to be vested with an authority derived from their Lord.—*West*.

4. Slavery; condition of a slave.

To be a queen in bondage, is more vile Than is a slave in base *servility*; For princes should be free. *Shakespeare, Henry VI. Part I.* v. 3.

Thus are poor *servitors*,
When others sleep upon their quiet beds,
Constrain'd to watch in darkness, rain, and cold.

And henceforth I am thy true *servitor*.
Shakespeare, Henry VI. Part III. iii. 3.

4. One of the lowest order in the university
of Oxford, similar to the sizer in that of
Cambridge.

His learning is much of a size with his birth
and education; no more of either than what a poor
hungry *servitor* can be expected to bring with him
from his college.—*Swift.*

Servitors (or sizers as they are called in Cam-
bridge) were probably appointed when colleges were
first established, and when there was a scarcity of
ill persons to supply the learned professions.—
Græce, Recollections of Sheddore, p. 2.

educated for some time, obtained a *servitorship* for
young M'Aulay.—*Boscwell, Tour to the Hebrides.*

Servitude. *s.* [Fr.]

1. Slavery; state of a slave; dependence.
Aristotle speaketh of men, whom nature hath
framed for the state of *servitude*, saying, they have
reason so far forth as to conceive when others direct
them.—*Hooker, Ecclesiastical Polity.*

You would have sold your knee to slaughter,
His prince and his peers to *servitude*,
His subjects to oppression and contempt.
Shakespeare, Henry V. ii. 2.

Unjustly thou deprav'st it with the name
Of *servitude*, to serve whom God ordains,
Or nature; God and nature bid the same,
Who: be who rules is worthiest.
Milton, Paradise Lost, vi. 174.

That it is necessary, that some persons in the
world should be in love with a servile *servitude*,
yet certainly they must be much beholden to their
own fancy, that they be pleased at it; for he that
rises up early, and goes to bed late, only to receive
addresses, is really as much abridged in his freedom,
as he that waits to present one.—*South, Sermons.*

In every age and country, until times comparatively
recent, personal *servitude* appears to have
been the lot of a large, perhaps the greater, portion
of mankind. We lose a good deal of our sympathy
with the spirit of freedom in Greece and Rome,
when the importunate recollection occurs to us,
of the tasks which might be enjoined, and the punish-
ments which might be inflicted, without control
either of law or opinion, by the keenest patriot of
the Comitia, or the Council of Five Thousand. A
similar, though less powerful, feeling will often force
itself on the mind, when we read the history of the
middle ages. . . . Under every denomination of *servi-
tude*, the children followed their master's condition;
except in England, where the father's state deter-
mined that of the children, on which account mas-
tards of female villains were born free; the law pre-
serving the liberty of their father. . . . It is not
generally known, I think, that predial *servitude*
was not abolished in all parts of France till the revolu-
tion. In some places, says Pasquier, the peasants
are tailables & vassals, that is, their contribution is
not permanent, but assessed by the lord with the
addition of proud humours, revenues sur les lieux, ac-
cording to the peasant's ability. Others pay a fixed
sum. Some are called *serfs de poursuite*, who can-
not leave their habitations, but may be followed by
the lord into any part of France for the tailie upon
their goods. This was the case in part of Cham-
pagne, and the Nivernois.—*Hallam, View of the*
State of Europe during the Middle Ages, ch. ii. and
note.

None of these Roman patriots, who portrayed
Julius Cæsar for aspiring to be a king, would have
had the smallest scruple about crucifying a whole
school of gladiators for attempting to escape from
the most odious: and degrading of all kinds of *ser-
vitude*.—*Mauclay, History of England, ch. xvii.*

2. Servants collectively. *Rare.*
After him a cumbersome train
Of herds, and flocks, and numerous *servitude*.
Milton, Paradise Lost, xii. 131.

Sesame. *s.* [Fr.; Lat. *sesum*; Gr. *sesamum*.]
Plant and seed of the genus *Pedalin*, and
order *Pedaliaceæ*; oilseed plant; oilseed.

Open sesame. The meaning of this as a
talisman, or word of power, is to be found in
the well-known tale of Ali Baba and the

Forty Thieves, in the 'Arabian Nights'
Entertainment.' In Mr. Baring-Gould's
'Curious Myths of the Middle Ages' (Sclani-
mir), reasons are given for believing that
this was the true Forget-me-not; i.e. the
plant which was not to be forgotten on
leaving the cave.

past not elsewhere found, took its surname from
that place where it was first found, but now it is
to be seen in the cornfields about Narbonne in
France, from whence I had seeds which prosper well
in my garden. . . . There is a kind of *Seseli* Creticum,
called also *Tordylium*. . . . There is likewise a kind
of *Seseli*, which hath a root as big as a man's arm.
. . . There is also a kind of *Seseli*, which bears white
forth for the first kind of *Daucus*. . . . There is like-
wise a kind of *Seseli* called *Seseli Marsiliense*, which
hath leaves very much chewed or cut, and finely
jagged, very much like the leaves of sweet fennel;
greater and thicker than the common fennel. . . .
There is another *Seseli* of Marsilia, which hath large
and great leaves like unto fennel.—*Gerarde, Herball*,
pp. 1630, 1631: 1633.

quantity or number has to another, in the
ratio of one and a half to one.

The periodical times of the planets are in *sesqui-

consequently the planets cannot be carried about by
an harmoniously circulating fluid.—*Chapin, Philo-
sophical Principles.*

Sesquitértian. *adj.* Having such a ratio, as

in any ancient author in the singular number, as
now it is used, but very often meet with it in the
plural, though with the same signification. In reck-
oning by *sceleria*, the Romans had an art. *Archæp*

Sextant. *s.* [Fr.]

1. Sixth part of a circle.

2. Astronomical instrument made in that form.

In order to test the accuracy of graduation of a *sexant*, it is necessary to have a series of well-defined objects, the angular distances between which must be accurately known. The *sexant* under trial is made to measure these angular distances; and the results thus obtained, when compared with the correct values of these distances (supposed to be otherwise determined) will give at once the error of the instrument. Now with regard to this series of objects, the following conditions are necessary in order that they may be convenient for the purpose of testing a *sexant*:—It is necessary that the objects should be distinctly seen and well defined. Luminous objects would be preferable, if they could be obtained. Luminous points would answer well. It is necessary that they should be at a very great or virtually infinite distance from the *sexant*, so that two lines proceeding from any point in the objects, the one to the index-glass, and the other to the horizon-glass, should be virtually parallel to each other. It is necessary that these objects should be at such angular distances from one another, that by means of them it may be possible to test, say every 1° of a *sexant's* arc. It is necessary that these objects should be always visible, or at least that they should be rendered visible easily, and without loss of time.—*H. Newell*, in *Proceedings of the Royal Society*, June 20, 1867.

She will cry Strawberries; nay, *shads* and mackerel.—*H. Jernyn*, *The Alchemist*.

Bacon Cuvier, in the last edition of the *Résumé Animal*, has mistaken the *shads*, of which we have two species, to the rank of a genus, on account of the deep central notch in the upper lip; and I have followed this example for the additional reason that it will the more easily and effectually afford the means of obtaining a desirable alteration in nomenclature. According to Cuvier, most modern authors have misapplied the systematic trivial names of these two species, calling the *shad* with teeth, and several spots along each side, *C. Alosa*; and the larger *shad* without teeth, and with a single spot only behind each gill-cover, or none at all, *Clupea huta*. The *Alosa* of Rondeletius is not described or figured as possessing either teeth or spots; and Cuvier, by his usual research, had probably satisfied himself that the fish to which the term *Alosa* had been originally applied was a toothless *shad*, and that the toothed and spotted *shad* was the true *huta*. Pennant, in noticing the second British species of *shad* taken in the Thames and the Severn, which is without teeth or the row of lateral spots, called it an *Allis*; a name which it would be desirable still to retain, in reference to the generic term *Alosa*. The old name for the *shads* was *Lachis*; and hence are derived *Halibut*, *Alachis*, *Alosa*, and *Allis* or *Alice*.—*Farrall*, *History of British Fishes*.

5. Dark part of a picture.

A shadow is a diminution of the first and second
light. The first light is that which proceeds im-
mediately from a lightened body, as the beams of the
sun. The second is an accidental light spreading
itself into the air or medium proceeding from the
other. Shadows are threefold: the first is a single
shadow, and the least of all; and is proper to the
plain surface where it is not wholly possessed of the
light. The second is the double shadow, and it is
used when the surface begins once to forsake your
eye, as in columns. The third shadow is made by
crossing over your double shadow again, which
darkens by a third part. It is used for the inner
shadow, and farthest from the light, as in gulls,
wells, and caves.—*Poacham*.

Shadows are cold, thin things, that have no warmth

Shagreen, s. Skin of a rough fish, Raia fallonica, or chagrinea; imitation thereof. See extracts.

The true oriental *shagreen* is essentially different from all modifications of leather and parchment. It approaches the latter somewhat indeed in its nature, since it consists of a dried skin, not combined with any tanning or foreign matter whatever: its distinguishing characteristic is having the grain or hair side covered over with small rough round specks or granulations.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Shagreen [is] a species of leather supposed formerly to have been prepared from the skin of this shagreen, a species of whale. It is prepared from horse or ass skin, its granular appearance being produced by embedding in it, while soft, the seeds of a species of rhinopodium, and afterwards shaving down the surface: it is dyed with the green produced by the action of sal ammoniac on copper filings. It was formerly much used for watch, spectacle, and instrument cases, and was made chiefly in Astracan.—*Brande and Cox, Dictionary of Science, Literature, and Art*.

Shale [is] a black silty substance, or a clay hardened into a stony consistence, and so much impregnated with bitumen, that it becomes somewhat like a coal. It forms large strata in Derbyshire.—*Chambers.*

Coals and aluminous earths, or shale.—*Philosophical Transactions*, vol. li. p. 691.

Shale is a name given to certain argillaceous rocks, which split in some degree like slate, but much less perfectly, and are so little altered as to be easily reducible to clay by mechanical rubbing and pounding. *Shales* are very common in the coal measures.

imp. . . . *Some shales* contain a marked proportion of bituminous matter capable of being separated by distillation at a low and regulated temperature. These are called bituminous *shales*. . . . *Shales* differ from schists in being almost entirely argillaceous and slightly metamorphic. . . . They differ from slates in being less perfectly metamorphosed. The *shales* in the coal measures are often loaded with fossil plants, which are very slightly changed. Slates, when they contain fossils, exhibit them in a greatly altered state, and schists contain only hygroscopic and crystalline minerals. Notwithstanding these broad distinctions, the young geologist may occasionally find difficulty in distinguishing *shales* from slates, and either of these rocks from schists. — *Anted*, in *Brande and Cox, Dictionary of Science, Literature, and Art*.

Shale. *v. n.* Peel; shell.

shall, *v. defective*. This is the entry, which, with what immediately follows, gives the notice as it stands in the original editions: In Chaucer, 'The fithie I *shall* to God,' means the fithie I *owe* to God: thence it became a sign of the future tense. The French use *devoir, dois, doit*, in the same manner, with a kind of future signification; and the Swedes have *shall*, and the Icelanders *skal*, in the same sense. It has no tenses but *shall* future, and *should* imperfect. The explanation of *shall*, which foreigners and provincials confound with *will*, is not easy; and the difficulty is increased by the poets, who sometimes give to *shall* an emphatical sense of *will*: but I shall endeavour, *crassi Minerva*, to show the meaning of *shall* in the future tense.

I shall love. It will be so that I must love;
I am resolved to love.

Shall I love? Will it be permitted me to love? will you permit me to love? will it be that I must love?

Thou shalt love. I command thee to love; it is permitted thee to love: (in poetry or solemn diction), It will be that thou must love.

Shalt thou love ? Will it be that thou must love ? will it be permitted to thee to love ?

He shall love. It will be that he must love ;
it is commanded him that he love.

It is a mind
That *shall* remain a poison where it is,
Not poison any further.—*Shall* remain!
Hear you this triton of the minnows? Mark you
His absolute *shall*?—*Shakespeare, Coriolanus, iii. 1.*

See Romulus the great . . .
This prince a priestess of your blood *shall* bear,
And like his sire in arms he shall appear.

Dryden, *Translation of the Æneid*, vi. 1053.
That he shall receive no benefit from Christ, is the

affirmation whereon all his despair is founded; and the one way of removing this dismal apprehension, is to convince him that Christ's death, and the benefits thereof, either do, or, if he perform the condition required of him, *shall* certainly belong to him.—*Hammond, On Fundamentals.*

Shall he love? Is it permitted him to love?
In solemn language, Will it be that he
must love?

The plural persons follow the signification of the singulars. *Johnson.*

The chief points connected with this verb (laying aside those which relate to *should* as its *preterit tense*, and which will be considered under that entry) are: 1. Its form and original import; 2. Its peculiar use in English as determined by the person of the pronoun with which it stands in combination.

1. *Its form.*—*Shall* is no true present tense, but a *perfect*; a perfect after the manner of *είρηαι*, or the Greek reduplicatives, and not a preterit or aorist, after the manner of *ἔειπον*. In English, then, it is in the same class as *swam*, *rose*, and the like, i.e. a past tense formed by changing the vowel, rather than one formed by adding *-t*, *-d*, or *-ed*; as *moved*, *called*. Premising, then, that the perfect differs from the aorist by implying that a past action is continued up to the time of speaking about it, and is, so far, present as well as preterit, it is easy to show that this approximate identity has left its traces in more languages than one. Where the *past perfect* is a *cause*, its *effect* may have the import of a present; and *I have learnt* may thus stand for *I know*; or *I have been constrained*, for *I must*. Thus in Greek it is usual to translate αἶσα as *I know*; and, twice verbatim, ἦκον as *I have come*, i.e. *here I am*. Can (q.v.) is a word of the same kind, — *I have become able*. The present tense, however, of *can*, is one with which we are familiar, being *ken*. Of *shall*, the present is only to be got at by inference; the word being defective not only in English, but in all the allied languages; and it will be seen that upon its import there is a conflict of opinion. In respect to its *form*, there is more unanimity. Substantive

form of the present. Of this, *skul* is the perfect; a perfect which, in respect to its meaning, comports itself as a present: and, so doing, gives origin to a secondary form in *-d* (*as moved, and called, &c.*, from *move* and *call*, &c.), which is preterit rather than perfect, though not (as may be seen under *Should*) wholly so. The following table gives us the inflections of the Celtic languages; the term *present* being used for what is etymologically a *perfect*, in conformity with custom rather than strict propriety. In like manner the preterit is, in respect to its origin, more of a present-perfect than ought else. Gothic—*present*, sing. *skul*, *skalt*, *skal*; dual, *skulu*, &c.; plur. *skulum*, &c.; preterit, sing. *skulda*, *skuldes*, *skulde*; plur. *skuldēdum*, &c. Old High German—*present*, sing. *scal*, *scilt*, &c.; plur. *skulumēs*, &c.;

preterit, *sculta*, &c.; conjunctive, present, *sculi*, &c.; preterit, *sculti*; infinitive, *sculan* (debere). In Nether, the forms are *sol*, *solt*, *uolen*, *solta*, *uole*, *solte*, *uulan*. Old Saxon—present, sing. *shal*, *shalt*, *shul*; plur. *skulun*, &c.; preterit *scholde*, &c. Anglo-Saxon—present, sing. *secal*, *secall*, *secal*; plur. *seculan*, &c.; preterit, *seculde*, &c. Old Frisian—present, sing. *shēl* or *shil*, &c.; plur. *schēlon* or *skilon*, &c.; preterit, *skolde*, &c. Icelandic or Old Norse—present, sing. *skal*, *skalt*, *skal*; plur. *skulun*, &c.; preterit, *skuldi*, &c. Modern High German—present, sing. *soll*, *sollst*, *soll*; plur. *sollen*, &c.; preterit, *sollte*, &c.; conjunctive, *solle*, &c. This tells us:—1. That none of the allied languages, though in all of them the verb is defective, have fewer forms than the English, and that some of them have more, viz. an infinitive and a conjunctive, not to mention the existence of a plural number. 2. That in this plural, as well as in the preterit, there is a change of vowels. 3. That the second person ends in *t*. In the Gothic there are other verbs which do so; while in English we have *will*, *wilt*. 4. That *sk-* is softened not only into *sh-*, but into *s-*. In the Dutch the *t* disappears in the preterit, giving *zonde*, and even *zon*. 5. That in the Old High German the sense of the infinitive is *debere* (the example is taken from a gloss). The same sense may be found in English, e.g. in the extract from Chaucer.

2. *Its original import.*—The current doctrine is probably that of Grimm, who deduces the present sense of the verb from that of *owe*, itself deduced from that of *kill*—killers being under certain liabilities, and, as such, *owes*.

* *Skul*, *doebu*, implies a firm *skila*; but the reader will be surprised at the original meaning, which I affix to these words. '*Skila*' must have meant 'I kill or wound'; '*skul*', 'I have killed or wounded, and am therefore liable to pay the wergild.' We find the Gothic '*skjola*' battle (1 Corinthians, x. 23); and I believe that to the same source may be traced the Old High German '*schulo*', '*schola*', and '*schulme*', '*mortuum*'... Perhaps, too, the Old Norse '*skjafa*', '*discriminare*', '*intelligere*' may be added; if we are justified in supposing the original notion was that of dissecting, or cutting to pieces, '*diminuire*', '*discutere*', '*diffundere*'. We shall no longer at any rate be embarrassed to explain why in Ultras '*duis*' means '*debitum*', a debt; whilst in Anglo-Saxon, '*doht*', and in the Old High German, '*dohter*', is an 'enemy.' The infliction of a wound was so much the subject of the wergild as a deadly blow, and the expressions '*wound*' and '*duis*' illustrate one another completely. '*Duisis kula*' and '*duisris haita*' are used by Ultras for the debtor and creditor respectively, 'he who owes the debt' and 'he who bids it' or demands it. *Translation* (in *Skall and wail*, p. 75) from *Grimm's History of the German Language*, h. ii. p. 802.

The following extracts suggest a closer connection with *skil* (see *Skill, v.n.*) denoting *difference* (*what skills it? - what difference does it make?*).

The sense of liability or indebtedness is explained by Grimm on the supposition that the original meaning of *skil*, was I have skin; thence, I have become liable for the wrong. A more satisfactory explanation may be found in *Norw skil, skjel, skel*, separation, difference, distinction. . . . In the same way *skide*, difference, is vulgarly used in the sense of consequence, tendency to produce an effect. 'It's no odds which you take.' The term signifying difference is there applied to that from whence the difference proceeds, the reason, cause, grounds of an action, the sake or at account of which it is done, the proper principles of action, equity, justice. - *Wedgwood, Dictionary of English Etymology.*

[Let [the] opposition or contrast of [shall] to *will*, lead us towards an inkling of its meaning. If *will*, mean agency determined by the volition of the agent, *shall* may mean agency determined by causes acting from without upon and through the agent; the agent who is more properly be considered as an instrument. Let us say that *will* means having the intention to do so and so, whilst *shall* means

being in the condition to do so and so. . . Now such apprehensions as the condition to do so and so, and the bias to do so and so, are by no means widely separated in meaning; inasmuch as the term has implies external influence, rather than internal resolve. The ideas of determination and decision are visibly allied to one another. A decided man is (in the first instance) one whom events have brought to a decision; just as a determined man is one whom events have brought to a determination. To keep in this state shows firmness of character, and hence the ordinary power of the word, *decide*, *distinguish*, *differ*; I submit that the sequence of ideas here is transparently clear. Now *skil-differ*, *distinguish*, *separate*. It is the Norse word *skilja*, so translated. It is also the English word *skilja*, so translated. *skilja* it is?—what difference does it make?—*Dr. R. G. Latham, The English Language*.

Dr. Jamieson's learned researches have enabled us to throw some light upon the great shallowness of modern English speech—the peculiar use of the auxiliaries *will* and *shall*; by their unskillfulness in which, more perhaps than by any other peculiarities, our countrymen are so often bewitched. It is not, we trust, entirely out of reverence towards this unlearnable system of speaking, that we are induced to say that this is one of the most capricious and inconsistent of all imaginable irregularities, and at variance, not only with original etymology, but with former usage, and substantially with itself. *Edinburgh Review*, no. 91: 1828.

Our future, or at least what answers to it, is *I shall*, thou *will*, he *will*. When speaking in the first person, we speak unambiguously: when speaking of . . . another, we speak courtously. . . . When the use of *shall* does not convey any appearance of infringing on another's free will, it is still employed in the old way to express futurity.—*C. J. Hare, in Philological Museum*, vol. ii. p. 219.

Archdeacon Hare's *Usus Ethicus* is taken from the brighter side of human nature; it explains *I shall, thou wilt*, but I cannot think it explains *I will, thou shalt*. The present explanation is taken from the darker side. . . . It seems to be the natural disposition of man to think of his own volition in the two following categories, and of another man's in the other two: Compelling, non-compelling; restrained, non-restrained. The ego, with reference to the non-ego, is apt, thinking of himself, to propound the alternative, 'Shall I compel, or shall I leave him to do as he likes?' So that, thinking of the other, the alternative is 'Shall he be restrained, or shall he be left to his own will?' Accordingly, the express introduction of his own will is likely to have reference to compulsion, in case of opposition; the express introduction of the will of another is likely to mean no more than the gracious permission of the ego to let the non-ego do as he likes. Correlatively the suppression . . . of reference to his own will, and the adoption of a simply productive form, on the part of the ego, is likely to be the mode with which, when the person is changed, he will associate the idea of another having his own way, while the suppression of reference to the will of the non-ego is likely to infer restraint produced by the predominant will of the ego.—*De Morgan, in Transactions of the Philological Society*, p. 186: 1868.

It is considered that the difference between being determined by the will and by circumstances other than the will, best agrees with the explanation of Hare, which the editor considers to be the true one. The rule itself is best laid down by Wallis. 'In the first person *shall* simply predicts; *will* promises or threatens. In the second and third persons, *shall* promises; *will* simply predicts.—Uram, *I shall burn*; ures, *thou wilt burn*; uret, *he will burn*; uremus, *we will burn*; uretis, *ye will burn*; urent, *they will burn*. Here *I predict—I will burn*; *thou shalt burn*; *he shall burn*; *we will burn*; *ye shall burn*; *they shall burn*. This I warrant, or will bring about—hoc futurum spondes, vel fuso ut sit.'

Sheldrake. s. [?] Duck of the genus

Tadorna. See extracts.

Teals, *sheldrakes*, and pekked fowls, that come
hither in winter out of Scandinavia, Muscovy, &c.—*Bayly, Anatomy of Melancholy*, p. 60.

The *sheldrake*, or *sheldrake*, is one of the most beautiful in appearance of our ornamental waterfowl. . . . Some are constantly found on the sea coast, and that during the whole year, performing flat shores, sandy bars, and links, where it breeds in rabbit burrows, or other holes in the soft soil, and hence has obtained the name of burrow duck, and has gambler, which Dr. Turner considers is derived from here and gambler, because it also builds in rocks. In Scotland it is called skeelung gosse, according to Sidal and other writers since his time. Many *sheldrakes* come from the north to visit this country for the winter, returning again in spring. The young *sheldrakes*, directly after being hatched in the rabbit burrows, are taken by the parent birds to the sea, where they may be seen in what the boatmen call troops of from thirty to forty; but as the female seldom hatches more than fourteen eggs, it is clear that each flock is formed by two or three broods. On their being approached, the old ones fly away, and leave the young to shift for themselves by diving.—*Farrall, History of British Birds.*

Sheldrake [is] the common name of the species of duck called *Anas tadorna*, which is the type of the subgenus *Tadorna* of Ray and modern ornithologists. This elegant species frequents many parts of our coast, and remains throughout the year. The female commonly selects a rabbit-hole in which to deposit her eggs, which are sometimes as many as sixteen in number. The *sheldrake* feeds on small fish, marine insects, and sea-weed.—*Owen, in Brande and Cox, Dictionary of Science, Literature, and Art.*
